FOREWORD

The Federal Power Act was originally enacted as the Federal Water Power Act, approved June 10, 1920 (41 Stat. 1063, 16 U.S.C. 791–823). The Federal Power Commission was reorganized January 1, 1931, as an independent Commission under the act approved June 23, 1930 (46 Stat. 797). By Title II of the Public Utility Act of 1935, approved August 26, 1935 (49 Stat. 838), the original Federal Water Power Act was made part I of the "Federal Power Act" and parts II and III were added. The Federal Power Act was amended May 28, 1948 (62 Stat. 275), August 7, 1953 (67 Stat. 461), August 15, 1953 (67 Stat. 587), June 4, 1956 (70 Stat. 226), and August 28, 1958 (72 Stat. 941 at 947). The Commission also administers the Natural Gas Act, approved June 21, 1938 (52 Stat. 821, 15 U.S.C. 717–717w), as amended February 7, 1942 (56 Stat. 83, 15 U.S.C. 717f), July 25, 1947 (61 Stat. 459, 15 U.S.C. 717f), March 27, 1954 (68 Stat. 36, 15 U.S.C. 717(c)), and August 28, 1958 (72 Stat. 941 at 947, 15 U.S.C. 717r), and has certain duties under the Tennessee Valley Authority Act, approved May 18, 1933 (48 Stat. 1075), and amendments thereto; the Bonneville Act, approved August 20, 1937 (50 Stat. 731); the Fort Peck Act, approved May 18, 1938 (52 Stat. 403); and under various Flood Control and River and Harbor Acts (notably the Flood Control Act of 1944, approved December 22, 1944 (58 Stat. 887)), and other statutes, as well as Executive Orders.

This volume, the thirty-third of a series, contains all the formal opinions and accompanying orders of the Federal Power Commission rendered, January 1, 1965 to June 30, 1965, inclusive. In addition to the formal opinions, there have been included intermediate decisions which have become final and selected orders of the Commission issued during such period.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP64-190

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 4, 1965)

On February 27, 1964, as amended on August 21 and October 27, 1964, Alabama-Tennessee Natural Gas Company (Applicant) filed in Docket No. CP64-190 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale, transportation and delivery of additional volumes of natural gas to existing customers, all as more fully set forth in the application, as amended, in this proceeding.

Specifically, Applicant proposes to construct and operate approximately 6.5 miles of 12-inch pipeline paralleling and looping Applicant's existing mainline in Colbert County and approximately 2.2 miles of 12-inch pipeline paralleling and looping Applicant's existing Tennessee River crossing in Morgan and Limestone Counties, all in the State of Alabama. The proposed facilities will increase Applicant's daily system delivery capacity by 6,010 Mcf, Applicant's presently authorized daily delivery capacity is 99,680 Mcf.

The total estimated cost of the subject facilities is $621,000, which cost will be financed by funds from internal sources and short-term bank loans.

Applicant states that the subject project will provide the capacity to deliver the additional supply of natural gas required by Applicant's customers during the winter of 1964–65 and to render such increased service on a long-term basis. Applicant's allocation of total authorized and proposed capacity is set forth in the attached appendix.

Applicant will obtain the gas supply necessary to meet the proposed increased sales from Tennessee Gas Transmission Company.

By letters dated July 9 and November 5, 1964, Applicant was issued temporary certificates authorizing the subject project.

On June 23, 1964, the City of Florence, Alabama, filed a protest to the subject application as originally filed. In the original application it was stated that Applicant would render additional service required by Florence provided the latter executed a precedent agreement for its total purchases for a period extending to November 1, 1983, the termination date of Applicant's present service agreement with its supplier, Tennessee Gas Transmission Company. By its protest of June 23, 1964, Florence objected to this provision, stating that it would not accede to Applicant's condition that Florence agrees to extending the term of all of its purchases, including the increase proposed in this docket, from 1971, the termination of the present service agreement, to 1983. In its amendment filed herein on August 21, 1964, Applicant states, among other things, that it and Florence have negotiated a precedent agreement wherein they have agreed to execute service agreements whereby Florence's obligation to purchase its gas requirements will terminate as to certain volumes in 1971 and as to other volumes in 1983. Said amendment contains as one of its exhibits a copy of the new precedent agreement.

In light of the new precedent agreement between Applicant and Florence, it appears that the two parties have resolved their differences; therefore, the Commission need not take any action upon the protest of Florence.

After due notice, no petition to intervene, notice of intervention or other protest to the granting of the application has been filed.

At a hearing held on December 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, amendments and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Alabama-Tennessee Natural Gas Company, a Delaware corporation having its principal place of business in Florence, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 2, 1948, in Docket No. G-585 (7 FPC 257).

(2) The facilities hereinbefore described, as more fully described in the application, as amended, in this proceeding, are to be used in the sale and/or transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed sales and/or transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sales and/or transportation of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

(6) This certificate should not entitle the industrial customer to whom additional firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Alabama-Tennessee Natural Gas Company, to construct and operate the proposed facilities and to sell and/or transport natural gas as hereinbefore described, all as more fully described in the application, as amended, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

(C) This certificate shall not entitle the industrial customer to whom additional firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

APPENDIX

ALABAMA-TENNESSEE NATURAL GAS COMPANY

ALLOCATION OF TOTAL AUTHORIZED AND PROPOSED CAPACITY IN DOCKET NO. CP64-190

	Allocated authorized and proposed capacity—Mcf
Jurisdictional customers:	
Athens, City of	2,000
Cherokee, Town of	350
Corinth, City of	4,500

MAINE PUBLIC SERVICE COMPANY, PROJECT NO. 2366

ORDER ISSUING LICENSE (MINOR)

(Issued January 4, 1965)

Application was filed on May 13, 1963, by Maine Public Service Company (Applicant) of Presque Isle, Maine, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2366, known as the Millinocket Lake Dam, located on Millinocket Stream in Piscataquis County, Maine.

Construction of the project commenced in 1942 and it was put into use in 1943. Although there is no power installation at the project site, the storage created by the project dam and reservoir is utilized to generate hydroelectric energy at Applicant's Caribou development (Project No. 2367) located 92 miles downstream on the Aroostook River and at Applicant's Tinker Development in New Brunswick, Canada, located 108 miles downstream on the same river. No lands of the United States are affected by the project.

The Millinocket Reservoir is formed by Millinocket Lake Dam at mile 7 on Millinocket Stream, a headwater tributary to the Aroostook River. The Millinocket and Munsungan Streams join to form the Aroostook River at about mile 105 on the latter river. The usable storage capacity of the project reservoir is 16,100 acre-feet derived from a drainage area of 70 square miles which results in an estimated runoff of about 1.8 cfs per mile. The discharge capacity of Millinocket Reservoir is 1,767 cfs at an elevation of 755.6 feet. During the month of February, 1960, Applicant released from Millinocket Reservoir storage an average discharge equivalent to 213 cfs. This resulted in an increased river stage at the Masardis gage, located 40 miles downstream, averaging one-half foot during February, 1960.

According to the available records, the Aroostook River has been used throughout its length since the early lumbering days for boat navigation, the floating of pulpwood and logs and the rafting of logs into New Brunswick, Canada, and down the St. John's River.

The Secretary of the Army and the Corps of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions for the conservation and development of fish and wildlife resources.

The Department of Health, Education, and Welfare has advised that the project does not have any adverse affects on water quality.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall be for a period of 50 years, effective as of July 1, 1942, since neither a declaration of intention nor a timely application for license was filed with respect to the construction of the project in 1942.

The Commission finds:

(1) The Aroostook River from the confluence of the Millinocket and Munsungan streams to the International boundary is a navigable waterway of the United States.

(2) The Millinocket Reservoir affects navigable waters of the United States.

(3) Applicant is a corporation organized under the laws of the State of Maine, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(4) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(5) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(6) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the

improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(7) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

> Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Maine Public Service Company (Licensee) of Presque Isle, Maine, under Sections 4(e) and 10(i) of the Act, for a period of 50 years, effective as of July 1, 1942, for the continued operation and maintenance of Project No. 2366, located on Millinocket Stream, and affecting navigable waters of the United States; subject to the terms and conditions of the Act not expressly waived herein, which Act is hereby incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2366 consists of:

> (i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.
>
> (ii) A rock-filled timber crib dam at the outlet of Millinocket Lake, 11 feet high and 228 feet long, a fishway, gated section, and all other structures, fixtures, equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 12. The Licensee shall pay to the United States the following annual charge:

> (i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $5.00, effective as of July 1, 1942.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MAINE PUBLIC SERVICE COMPANY, PROJECT NO. 2367

ORDER ISSUING LICENSE (MINOR)

(Issued January 4, 1965)

Application was filed on May 13, 1963, by Maine Public Service Company (Applicant) of Presque Isle, Maine, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2367, known as the Caribou Hydraulic Plant, located on the Aroostook River, in the Township of Caribou, in Aroostook County, Maine.

The project was originally constructed in 1895 in conjunction with a sawmill and was rebuilt in 1927 when the present power plant was installed. No lands of the United States are affected by the project.

The Caribou Hydraulic Plant is located at mile 21 on the Aroostook River. In our order of even date pertaining to Applicant's Project No. 2366 located on Millinook Stream, a headwater tributary of the Aroostook River, we found that the Aroostook River from the confluence of the Millinocket and Munsungan streams to the International boundary is a navigable waterway of the United States.

The Secretary of the Army and the Corps of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions for the conservation and development of fish and wildlife resources.

The Department of Health, Education, and Welfare has advised that the project does not constitute a source of pollution and removal of the dam of flow regulation is not warranted at this time, and the granting of a license for the project will not create or intensify vector problems.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall be for a period effective as of April 1, 1962 and terminating December 31, 1993.

The Commission finds:

(1) The Caribou Hydraulic Plant affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Maine, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,070 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

> Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Maine Public Service Company (Licensee) under Sections 4(e) and 10(i) of the Act, for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2367, located on the Aroostook River, a navigable water of the United States, subject to the terms and conditions of the Act not expressly waived herein, which Act is hereby incorporated herein by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2367 consists of:

> (i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.
>
> (ii) a rock-filled timber crib dam with concrete cap, 14 feet high and 450 feet long; and a powerhouse of brick and concrete construction containing two water-wheels of 535 horsepower each, and two 400 kw capacity generators; and all other structures, fixtures, equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 12. The Licensee shall pay to the United States the following annual charge, effective as of April 1, 1962:

> (i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $53.00.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MAINE PUBLIC SERVICE COMPANY, PROJECT NO. 2368

ORDER ISSUING LICENSE (MINOR)

(Issued January 4, 1965)

Application was filed on May 13, 1963, by Maine Public Service Company (Applicant) of Presque Isle, Maine, under Section 4(e) of the Federal Power Act (Act) for a license for constructed minor Project No. 2368, known as the Squa Pan Plant, located on the headwaters of Squa Pan Stream in the Township of Masardis, in Aroostook County, Maine. No lands of the United States are affected by the project.

The project reinforced concrete dam was built in 1927 and 1928 with a height of 35 feet and a length of 60 feet. Earth embankments of the same height extend the length on both sides of the dam. The dam contains a spillway 23 feet in length and a brick and concrete powerhouse in which a power plant, designed for a 30 foot head, was installed in 1941 with a name plate rating of 1,500 kilowatts. The top of the dam corresponds to an elevation of 607 feet. The forebay elevation is 602 feet and the tailrace elevation is 575.5 feet when the plant is operating and 571.75 feet when the plant is closed. A usable storage capacity of 58,600 acre-feet is provided for between elevations 586 and 602 feet. As with Applicant's Millinocket Reservoir on Millinocket Stream (Project No. 2366), the Squa Pan Reservoir is used mainly for the storage of water to be used at Applicant's Caribou Development (Project No. 2367) located 53 miles downstream on the Aroostook River, and at Applicant's Tinker development in New Brunswick, Canada, located 70 miles downstream on the Aroostook River. The discharge capacity of the Squa Pan Plant is about 523 cfs. Applicant estimates that 1.75 billion cubic feet of water flow through the Squa Pan Plant annually which amounts to an average annual discharge of 55.5 cfs. The total drainage of the Squa Pan dam is about 70 square miles. At the Washburn gage (at mile 43 on the Aroostook River and 30 river miles downstream from Squa Pan Lake) during the month of February 1962, Applicant released from the Squa Pan Lake storage an average discharge equivalent to 362 cfs. This resulted in an increased river stage at Washburn amounting to an average increase of 4 inches during February, 1962.

In our order of even date pertaining to Applicant's Project No. 2366 on Millinocket Stream, a headwater tributary of the Aroostook River, we found that the Aroostook River from the confluence of the Millinocket and Munsungan streams to the International boundary is a navigable waterway of the United States.

The Secretary of the Army and the Corps of Engineers have reported that the plans of the project structures affecting navigation are satisfactory.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions for the conservation and development of fish and wildlife resources, and a condition providing for stream gaging.

The Department of Health, Education, and Welfare has advised that the project does not constitute a source of pollution and removal of the project dam or flow regulations is not warranted at this time, and that the granting of a license for the project would not create or intensify mosquito problems.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall be for a period effective as of January 1, 1941 and terminating December 31, 1990.

The Commission finds:

(1) Squa Pan Lake affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Maine, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 2,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

> Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Maine Public Service Company (Licensee) under Sections 4(e) and 10(i) of the Act, for a period effective as of January 1, 1941, and terminating December 31, 1990, for the continued operation and maintenance of minor Project No. 2368, located on the headwaters of Squa Pan Stream, in Masardis, Aroostook County, Maine, and affecting navigable waters of the United States, subject to the terms and conditions of the Act not expressly waived herein, which Act is hereby incorporated herein by reference as a part of this license; and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2368 consists of:

> (i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.
>
> (ii) a reinforced concrete dam at the outlet of Squa Pan Lake, 35 feet high and 60 feet long; a brick and concrete powerhouse with a 2000 horsepower water wheel connected to a generator rated at 1500 kw; and all other

structures, fixtures, equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 12. For the purpose of reimbursing the United States for the costs of administration of Part I of the Act the Licensee shall pay to the United States for the period January 1, 1941, through March 31, 1962, an annual charge of $5.00 and effective April 1, 1962, an annual charge of $100.00.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP64-4

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 4, 1965)

On July 5, 1963, Tennessee Gas Transmission Company (Applicant), filed in Docket No. CP64-4, an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity, authorizing the construction and operation of facilities and the exchange of natural gas with McWood Corporation (McWood) at points on Applicant's lateral transmission lines in Southwestern Louisiana, and the operation and maintenance of metering facilities, all as more fully set forth in the application.

Applicant proposes to take a maximum of 1,500 Mcf of natural gas produced by McWood from the Creole Field in Cameron Parish, Louisiana, and deliver an equivalent volume to McWood at a point on its lateral transmission line (16-inch South Louisiana Bayou Sale Line) in Jefferson Davis Parish, Louisiana. Applicant has agreed to transport all of the natural gas, a distance of 40.6 miles for a monthly exchange charge of $490, consisting of a transportation charge of 1.51 cents per 100 miles, amounting to $280, plus a metering charge of $210.

McWood will construct, operate and maintain all facilities at the point of receipt of natural gas by Applicant, and Applicant will construct, operate and maintain facilities for the return of gas to McWood. The cost of construction of points of receipt and return will be borne by McWood.

The Commission on August 16, 1963, issued Applicant a temporary certificate authorizing the proposed facilities and service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The proposed construction and operation of facilities and exchange of natural gas as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and exchange of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Tennessee Gas Transmission Company, authorizing the construction and operation of facilities and exchange of natural gas as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all the applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and exchange of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within three months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64–226

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 4, 1965)

On April 6, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP64–226 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant to convert to interstate operation certain of its existing intrastate facilities, located in Duval, Jim Wells, San Patricio, Live Oak and Bee Counties, Texas, all as more fully set forth in the application in this proceeding.

Applicant proposes to convert to interstate operation its Bruni-Comal Line which consists of approximately 108.3 miles of 14-inch, 18-inch and 20-inch pipe and the tie cross-over between the Bruni-Comal Line and Pettus Junction which consists of approximately 3.7 miles of 16-inch pipe.

It appears that gas is presently transported in interstate commerce from Applicant's Southwest Zone to its Central Zone by means of its certificated Agua Dulce-Sterlington Line. At the present time gas flows from the San Antonio District to the Agua Dulce-Sterlington Line from several sources, two of them being Applicant's 18-inch Orange Grove-Agua Dulce Line and 18-inch Pettus-Refugio Line. Applicant proposes to connect the Bruni-Comal Line, together with the fields connected thereto, to the Agua Dulce-Sterlington Line through the Orange Grove-Agua Dulce Line.

Applicant states that, as a result of the loss of a major intrastate load in San Antonio, it has an excess supply of gas in its San Antonio District, a portion of which is connected to its Bruni-Comal Line. Applicant further states that it is necessary from time to time to augment the supply of gas for the Agua Dulce-Sterlington Line, and therefore, it proposes to take approximately 29,652 Mcf on a peak day of the excess gas in the Bruni-Comal Line and flow it into the Agua Dulce-Sterlington Line.

The total cost to convert the subject facilities is estimated to be under $25,000. Said costs represent certain yard and station rearrangements at Agua Dulce.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 3).

(2) The existing facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the conversion and operation of said existing facilities and the transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The conversion and operation of the existing facilities and the transportation of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas

Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to convert and operate the subject existing facilities and to transport natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The subject existing facilities shall be converted and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within two months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65–105

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 4, 1965)

On October 19, 1964, United Gas Pipe Line Company (Applicant), P.O. Box 1407, Shreveport, Louisiana, 71102, filed in Docket No. CP65–105 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation and sale of natural gas in interstate commerce to Humble Oil & Refining Company (Humble) in Cherokee County, Texas, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 75 feet of 2-inch pipe line and sales meter and regulator station and appurtenant equipment near Milepost 55.9 on the 6-inch Longview Compressor Station to Huntsville lateral, being all in the James H. Shaw A–769 Survey, Cherokee County, Texas.

Applicant proposes to use the above described facilities to provide for the sale and delivery of natural gas to Humble for use as make-up gas in Humble's gas lift operations in Neches Oil Field, Cherokee County, Texas. Estimated peak day and annual requirements of Humble of 300 Mcf and 50,000 Mcf respectively, will be purchased at a cost of 34.3 cents per Mcf.

The cost of the proposed facilities is $1,841, which will be defrayed by Applicant out of its current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The proposed construction and operation of facilities and sale and delivery of natural gas by Applicant to Humble Oil & Refining Company as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation and delivery of natural gas to Humble Oil & Refining Company as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within 60 days of the date on which this order issues.

AREA RATE PROCEEDING, DOCKET NO. AR61-1

STATEMENT OF COMMISSIONER BLACK IN RESPONSE TO "MOTION AND AFFIDAVIT TO DISQUALIFY VICE CHAIRMAN DAVID S. BLACK"*

A group of producer parties has moved that I withdraw from participation in this proceeding; or alternatively that the Commission disqualify me. It would appear that before the Commission considers whether I should be ordered to withdraw, it is appropriate that I arrive at my individual determination concerning my voluntary withdrawal.

---

*See Opinion No. 447, *infra*, p. 43.

For the reasons set forth below I must refuse to disqualify myself and, in the absence of an order of the Commission directing otherwise, I will discharge my duties as a Member of this Commission and participate fully in the decision of this case.

Movants state two separate grounds for my disqualification. They urge first that I have prejudged an issue in this case and second that I have "evinced personal bias and prejudice." The motion is based upon an address I delivered to the annual convention of the Pacific Coast Gas Association in Coronado, California on September 16, 1964. In that address I expressed my views concerning the Commission's jurisdiction over sales by independent producers in interstate commerce and the importance of this jurisdiction to consumers and to the retail distributors who serve them. I sought to answer various arguments which had been advanced in articles appearing in trade journals of the gas industry to the effect that regulation of such sales by the Federal Power Commission was unnecessary and in fact harmful to the industry and that therefore the Congress should enact legislation terminating our jurisdiction. One such argument maintains that the economic forces of competition in a free market will stabilize gas prices and keep them at a reasonable and fair level. I attempted to refute this argument stating it to be my opinion that there does not in fact exist an effective competitive market which would provide an acceptable substitute for Commission jurisdiction.

Movants assert that they have introduced evidence on the matter of competition in AR61–1, that it is an issue in these proceedings and that my remarks demonstrate that I have prejudged this issue.

My remarks were directed solely to a defense of the Commission's jurisdictional responsibility to regulate independent producer sales under the law as it has been interpreted by the United States Supreme Court (which, of course, is not and could not be an issue in AR61–1). I expressed the view that our regulatory jurisdiction should be preserved, and urged the retail gas distributors to take an active part in resisting attempts to change the law. The intent of my speech was concerned only with *whether* producer sales should be regulated; not *how* they should be regulated. If the record in this case demonstrates a quality or quantum of competition which would affect the method of regulation of producer sales in interstate commerce, this factor must be and will be considered in arriving at our decision. I have no question as to my ability to focus impartial and open minded attention on evidence of this nature.

Broad social and economic concepts pervade most of our work as regulators and are threaded through the scores of litigated cases which come before us for decision. From time to time, we may address ourselves publicly to a matter upon which, it turns out, evidence has been or is subsequently, introduced at the hearing stage in a litigated case which will eventually reach us for decision. We can, I suppose, discontinue all public statements except in the form of Commission orders to avoid this eventuality, but I do not think that this would be in the public interest. And in any event this approach would not really answer Movants' complaint. It is not the fact of the public utterance to which they object; it is the fact that the view or the opinion is held at all.

The views I expressed relative to competition were drawn from my observations as a Commissioner over the past year and a half, from participation in the regulatory process, and exposure to a large volume of published material in the press. It would be surprising if I had not formed some opinion concerning this most fundamental and much discussed question. But surely opinion is not incompatible with our obligation to make a fair and objective evaluation of the record in a formal proceeding and to render a decision based on that record. I regret that any public statements that I have made should bring into question my ability to do so. I recognize this to be my responsibility and reaffirm it without qualification.

Movants also assert that I have demonstrated personal bias against independent producers and cite in support of this contention a number of passages from my speech. They say that it is "clear from the face of the address that Commissioner Black is firmly convinced that independent producers must be tightly shackled at every turn." Personal bias is essentially a subjective matter and I can only deny that I entertain any such convictions which Movants impute to me or that my speech was intended to reflect any such sentiment. A fair reading of the speech in its entirety shows neither prejudgment of any issue in AR61–1 nor hostility to the independent producers of natural gas. It sets forth a defense of the Commission's responsibility under the law to regulate sales in interstate commerce by independent producers of natural gas, and states my disagreement with the arguments which have been advanced to end our regulatory jurisdiction. I disavow any implication which might be drawn from my remarks that I cannot or will not give full and fair consideration to the arguments of the producers who are parties to this case concerning the method by which they should be regulated to the extent such arguments are supported by the record.

For these reasons I decline to withdraw from participation in the remaining stages of this proceeding.

DAVID S. BLACK,
Commissioner.

JANUARY 5, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP65–126

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 5, 1965)

On November 5, 1964, Columbia Gulf Transmission Company (Applicant), filed in Docket No. CP65–126 a budget-type application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity, authorizing the construction and operation of facilities, all as more fully set forth in the application.

Applicant seeks authorization to construct and operate during the calendar year 1965 certain facilities necessary to take into its main line system natural gas purchased by United Fuel Gas Company from producers in the general area of Applicant's existing transmission system.

The application proposes total construction not to exceed $500,000, with no single project to exceed $125,000. The proposed construction of facilities will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Columbia Gulf Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 5, 1958 in Docket No. G–15524 (20 FPC 681).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500,000 with no single project to exceed a cost of $125,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Columbia Gulf Transmission Company to construct during the calendar year 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $500,000, with no single project to exceed a cost of $125,000, and shall not be interpreted as authorization to attach new customers or to increase the volume of sales to existing customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

HUMBLE OIL & REFINING COMPANY, DOCKET NO. G-9287, ET AL.; NATURAL GAS PIPELINE COMPANY OF AMERICA, RP65-7; TRUNKLINE GAS COMPANY, RP65-8; MISSISSIPPI RIVER FUEL CORPORATION, RP65-9; HUMBLE GAS TRANSMISSION CORPORATION, RP65-12

ORDER RELEASING REFUNDS IN PART

(Issued January 5, 1965)

In our order issued September 29, 1964, issued in Humble Oil & Refining Co., Docket No. G-9287, *et al.*, 32 FPC 873, we directed the above-named pipeline companies to report their intended disposition of the refunds to be made by Humble Oil & Refining Company (Humble) due to the settlement of Humble's rate proceedings in Docket No. G-9287, *et al.* The reports of these companies indicate that except for *de minimis* amounts the refunds will be passed on to companies not subject to our jurisdiction.

Our order also provided that, if any state regulatory agency so requested, disbursement would be deferred until the ultimate disposition of the funds could be determined. No such requests had been received with regard to the funds to be distributed by the above-named pipeline companies.

The Commission orders:

(A) Humble and Empire Trust Company (Escrow Agent), the escrow agent appointed by Humble pursuant to Paragraph (H) of our order of July 8, 1964, issued in Humble Oil & Refining Co., Docket No. G-9287, *et al.*, 32 FPC 49, are jointly directed to release and pay over to the above-named parties the total amounts due each as specified in Refund Report filed by Humble on September 21, 1964.

(B) Humble and the Escrow Agent are jointly directed to release and pay over to the above-named customers the net earnings of such escrow account attributable to the amounts specified.

(C) Each of the above-named pipeline companies shall distribute and pay over the amounts specified in Paragraphs (A) and (B) in accordance with the report filed pursuant to Paragraph (A) of our order in Humble Oil & Refining Company, Docket No. G-9287, *et al.*, issued September 29, 1964.

(D) Pending further order of the Commission, Humble shall retain all remaining amounts to be refunded in accordance with Paragraphs (F) and (H) of the order of July 8, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

HUMBLE OIL & REFINING COMPANY, DOCKET NO. G-9287, ET AL.; NATURAL GAS PIPELINE COMPANY OF AMERICA, RP65-25; FLORIDA GAS TRANSMISSION COMPANY, RP65-26; TEXAS EASTERN TRANSMISSION CORPORATION, RP65-27; AMERICAN LOUISIANA PIPE LINE COMPANY, RP65-28; THE OHIO FUEL GAS COMPANY, RP65-29; NORTHERN NATURAL GAS COMPANY, RP65-30; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, RP65-31; MISSISSIPPI RIVER FUEL CORPORATION, RP65-32; SOUTHERN NATURAL GAS COMPANY, RP65-33; TEXAS GAS TRANSMISSION CORPORATION, RP65-34

ORDER REQUIRING REPORT OF INTENDED DISPOSITION OF REFUNDS

(Issued January 5, 1965)

In our order issued September 29, 1964, in *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, 32 FPC 873, we directed the pipeline customers of Humble Oil & Refining Company to report their intended disposition of the refunds generated by the settlement of Humble's rate proceedings in Docket No. G-9287, *et al.* The reports filed with the Commission, state regulatory agencies and the customers of these pipelines (including the above-named companies) indicate that the above-named pipeline companies will receive significant amounts from one or more of Humble's direct customers.

In furtherance of the policy stated in our orders of July 8, 1964, 32 FPC 49, and September 29, 1964, issued in *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, we herein require that each of the above-named pipeline companies report the manner in which they intend to dispose of the amounts to be received from the customers of Humble. These reports shall state the amount to be received by the company from each such customer, whether the company intends to pass on all or part of the refund amount, the names of the parties to receive refunds and the amount each is to receive. If any of the above-named companies claims the right to all or part of the refund amount, it should give a brief statement of the legal or equitable basis for such claim. The amounts claimed shall be specifically itemized and the report shall set forth applicable time periods and docket numbers where such information is deemed relevant to the claim of retention.

The reports required herein shall be contemporaneously served on all state regulatory agencies which exercise jurisdiction over the customers of the above-named companies. These agencies are also being served with a copy of this order. If any of these agencies wants the disbursement of the refund amounts deferred for any reason, it should notify the Commission within ten days of the receipt of the reports required herein.

The Commission orders:

(A) The natural gas companies listed in the caption (except Humble) shall submit, in their respective dockets, within ten days of the issuance of this order, the report required herein and shall serve such reports on their customers and the interested state commissions.

(B) Any of the above-named companies claiming the right to retain any portion of the refund amount shall submit in addition a statement of the legal or equitable basis for such claims.

(C) Except as specifically ordered by this Commission, Humble shall retain the refund amounts in accordance with Paragraphs (F) and (H) of our order of July 8, 1964, as amended by our order of August 7, 1964, 32 FPC 542.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP65-143

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 5, 1965)

On November 19, 1964, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP65-143 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of routine field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $5,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 11, 1947, in Docket No. G-880 (6 FPC 148).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's com-

pliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

(8) The certificate hereinafter issued should not be construed as authorizing Applicant to attach new customers or to increase the volume of sales to existing customers.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Eastern Transmission Corporation, to construct during the calendar year 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $5,000,000 with no single project to exceed a cost of $500,000.

(E) The certificate issued herein shall not be construed as authorizing Applicant to attach new customers or to increase the volume of sales to existing customers.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-119

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 5, 1965)

On November 3, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP65-119 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicant during the three years commencing January 1, 1965, to construct and operate natural gas pipeline facilities and compression facilities for the testing and development of underground reservoirs for the storage of natural gas located near the route of Applicant's pipeline system in the States of Alabama, Florida, Louisiana, Mississippi and Texas, all as more fully set forth in the application in this proceeding.

Applicant agrees in this "budget-type" application (1) that the volume of natural gas to be injected into the prospective storage fields will not exceed a total of 10,000,000 Mcf with not more than 2,000,000 Mcf being injected into any single reservoir; (2) that the gas will be injected for testing purposes only during off-peak periods; (3) that with the exception of occasionally withdrawing gas for testing purposes any storage field developed pursuant to authorization received in this docket will not be utilized to render service without further authorization of the Commission; (4) the total expenditure for the three-year period will not exceed $3,000,000 with not more than $1,000,000 being spent for any one-year period, and (5) the cost of the project will be charged to Account No. 822 of Part 201, Underground Storage Exploration and Development Expenses, if such project is ultimately determined to be infeasible for storage purposes.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G–216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of subparagraphs (1), (2), (3), (4) and (5) of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit the information required by Subparagraphs (6) and (7) of Section 157.7(d) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, for a period of three years commencing January 1, 1965, to construct and operate the proposed facilities for the testing and development of underground reservoirs for the storage of natural gas as hereinbefore described, all as more fully described in the application in this proceeding and as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The certificate issued by paragraph (A) above is hereby conditioned upon Applicant's compliance with the provisions of Subparagraphs (1), (2), (3), (4) and (5) of Section 157.7(d) of the Commission's Regulations under the Natural Gas Act.

(D) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant shall submit the information required by Subparagraphs (6) and (7) of Section 157.7(d) of the aforesaid Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE ATLANTIC REFINING COMPANY, DOCKET NOS. G–9283 AND G–9284 ET AL.[1]

ORDER TERMINATING PROCEEDINGS

(Issued January 6, 1965)

On October 8, 1964, 32 FPC 933, we issued an order in these proceedings approving a rate settlement proposal, terminating proceedings and prescribing refunds. The order provided, *inter alia*, that the Section 4(e) proceedings listed in Appendix A to the order, shall terminate upon full compliance by Atlantic Refining Company (Atlantic) with all the terms and provisions of the order. Not included among the Section 4(e) proceedings set forth in Appendix A were certain of such proceedings which relate to proposed increased rates, never made effective, under certain of the rate schedules for which settlement rates were approved. Accordingly, it is appropriate that the proceedings concerning such proposed increased rates be severed from related area rate proceedings, and terminated at the same time as the proceedings set forth in Appendix A to the order of October 8, 1964, and under the same terms and provisions.

The Commission finds:

The proposed settlement of the subject proceedings having been approved by order issued October 8, 1964, and the proposed increased rates concerned therein never having been made effective, good cause exists for terminating the proceedings, and for severing certain of the proceedings from related area rate proceedings.

The Commission orders:

Upon full compliance by Atlantic with all the terms and provisions of the order issued herein on October 8, 1964, the Section 4(e) proceedings listed in the appendix hereto shall terminate, and one of said proceedings shall be severed from the consolidated proceedings in Docket No. AR64–1.

THE PERMIAN OIL AND GAS COMPANY, DOCKET NO. G–13603

ORDER AMENDING ORDER AS AMENDED

(Issued January 6, 1965)

On October 8, 1964, the Permian Oil and Gas Company (Petitioner) filed a petition to amend the order issued by the Commission on December 19, 1957, 18 FPC 815, as amended by subsequent orders of the Commission dated September 29, 1958, 20 FPC 439 and July 24, 1959, 22 FPC 124, respectively, in Docket No. G–13603.

Petitioner is the successor in interest by virtue of corporate merger of Sandar Corporation and the Home Utilities Company. The original order above mentioned was issued upon the application filed by Home Utilities Company under Section 7(a) of the Natural Gas Act. By the order of July 24, 1959 The Ohio Fuel Gas Company was directed to sell and deliver to Petitioner, volumes of natural gas up to 179 Mcf per day.

Applicant now seeks to have the volumes increased from 179 Mcf per day to 195 Mcf per day in 1965, 205 Mcf per day in 1966, 208 Mcf per day in 1967, 212 Mcf per day in 1968 and 215 Mcf per day in 1969 upon the grounds that the projected growth of its market requires the additional volumes in order to meet its demands and that it has installed facilities capable of performing the additional gas service.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 3, 1964 (29 F.R. 16232). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate in Docket No. G–13603 as amended by subsequent orders as above stated, should be further changed and amended as requested by the petition in this proceeding.

The Commission orders:

(A) The order in Docket No. G–13603 issued on December 19, 1957 as amended by orders issued on September 29, 1958 and July 24, 1959 as they pertain to the maximum peak day delivery of natural gas to Petitioner, is hereby further amended so as to increase the volumes of peak day deliveries each year beginning in 1965 through 1969 as herein above stated.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP65–98

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 6, 1965)

On October 12, 1964, Southern Natural Gas Company (Applicant) filed in Docket No. CP65–98, an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities near Ragland, St. Clair County, Alabama, all as more fully set forth in the application.

Specifically, Applicant seeks authority to construct and operate a line tap, measuring station, and 0.284 mile of 4½-inch tap line, all for the purpose of making deliveries of natural gas to a new plant of Cement Asbestos Products Company, being constructed near Ragland, Alabama. Estimated annual and peak day requirements are 162,000 Mcf and 862 Mcf, respectively. All deliveries are to be on an interruptible basis.

The estimated total cost of Applicant's proposed construction is $22,560, and will be financed with internal funds.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on December 22, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The certificate issued hereinafter should be granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Southern Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(D) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 60 days from the date of the issuance of this order.

[LETTER-ORDER REJECTING RATE FILING]

January 6, 1965.*

SUN OIL COMPANY,
P.O. Box 2880,
Dallas, Texas, 75221.
Attention: Mr. R. L. Sullivan

GENTLEMEN: This is with reference to your submittals on December 9, 1964, of notices of change under your FPC Gas Rate Schedule Nos. 125, 131 and 133, proposing rate increases to level exceeding 18.0¢ per Mcf for the sale of gas to Tennessee Gas Transmission Company from various fields in Texas R.R. District No. 4.

Permanent certificates authorizing such sales were issued in Docket No. CI61-657, CI61-1101 and CI61-1584 by Commission order of March 23, 1964 (Opinion No. 422). The order provided for a moratorium on the filing of all price increases in excess of 18.0¢ per Mcf, inclusive of tax reimbursement, pending the issuance of a final decision in the area rate proceeding in Docket No. AR64-2 or until January 1, 1968, whichever is earlier. Stay of such moratorium provisions was denied in the Commission order accompanying Opinion No. 422-A, issued May 27, 1964, 31 FPC 1315.

The proposed changes in rate are in conflict with the above-mentioned moratorium provisions of the order accompanying Opinion No. 422. Accordingly, the proposed notices of change in rate submitted December 9, 1964, are hereby rejected. One copy of each such notice is being retained in the Commission's files for informational purposes. All other copies are returned herewith.

---

*Rehearing denied March 5, 1965, 33 FPC 421.

By direction of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

INVESTMENT TAX CREDIT UNDER 1962 AND 1964 AMENDMENTS TO INTERNAL REVENUE CODE; ACCOUNTING TREATMENT BY PUBLIC UTILITIES, LICENSEES, AND NATURAL GAS COMPANIES, DOCKET NO. R-232

ORDER AMENDING ORDERS NOS. 289 AND 290

(Issued January 7, 1965)*

The Commission recently issued its Orders Nos. 289 and 290[1] in this proceeding, wherein it prescribed new accounts for public utilities and licensees, and natural gas companies to account for the investment tax credit allowed by the Internal Revenue Code.

These orders also directed the accounting to be followed by the affected companies in disposing of the amounts of accumulated investment credits in Account 253, Other Deferred Credits, which had been accumulated during the years 1962 and 1963 in accordance with the interim accounting established by the Commission in Order No. 261.

To implement adjusting entries because of accounting prescribed in Order No. 261, relating to the interim accounting for the investment tax credits, it will be necessary to amend ordering clause (F) of Orders Nos. 289 and 290. Order No. 261 required that Account 409, Income Taxes, show the actual tax amount including any investment tax credit used to reduce tax liability for the reporting period and that Account 426, Other Income Deductions, be debited with the amount of such tax reductions, thus "washing out" the effect of the tax reduction on net income. In other words, the utility operating income during the interim period was increased by the amount of the investment tax credit but the overall net income shown in annual reports to the Commission was decreased by the same amount. This was accomplished by suspending the tax credits in Account 253, Other Deferred Credits, pending final accounting disposition by the Commission. Ordering clause (F) in Orders Nos. 289 and 290 did not include entries necessary to reverse the effect of the interim accounting. We are, therefore, herein amending that clause in both Orders Nos. 289 and 290 to prevent a distortion of the tax accounts and utility operating income in 1964.

Accordingly, the Commission, acting pursuant to the authority set out in Orders Nos. 289 and 290, *orders:*

(A) The text of the opening paragraph in ordering clause (F) of Order No. 289 (29 F.R. at p. 15022) is amended to read as follows:

(F) In view of our order herein rescinding Order No. 261, issued January 9, 1963, insofar as it relates to the interim accounting of natural gas companies, such companies, to which the accounting in the following paragraphs 1, 2 and 3 are applicable for the accounting period ending December 31, 1964, shall debit Account 411.1, Investment Tax Credit Adjustments, and credit Account 421, Miscellaneous Nonoperating Income, for amounts previously debited to Account 426, Other Income Deductions, and shall dispose of the amounts of accumulated investment tax credit in Account 253, Other Deferred Credits, accumulated in accordance with Order No. 261 during 1962 and 1963, as follows:

---

*Published in the Federal Register on January 14, 1965 (30 F.R. 484).

[1] Order No. 289, issued November 2, 1964, 32 FPC 1255 (29 F.R. 15020, November 6, 1964). Order No. 290, issued December 17, 1964, 32 FPC 1470 (29 F.R. 19214, December 23, 1964).

(B) The text of the opening paragraph in ordering clause (F) of Order No. 290 (29 F.R. at p. 18215) is amended to read as follows:

(F) In view of our order herein rescinding Order No. 261, issued January 9, 1963, insofar as it relates to the interim accounting of public utilities and licensees, such companies, to which the accounting in the following paragraphs 1, 2 and 3 are applicable, for the accounting period ending December 31, 1964, shall debit Account 411.1, Investment Tax Credit Adjustments, and credit Account 421, Miscellaneous Nonoperating Income, for amounts previously debited to Account 426, Other Income Deductions, and shall dispose of the amounts of accumulated investment tax credits in Account 253, Other Deferred Credits, accumulated in accordance with Order No. 261 during 1962 and 1963, as follows:

(C) These amendments shall be effective as of the date of the issuance of the orders to which they are, respectively, amendatory.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

H. L. HAWKINS & H. L. HAWKINS, JR. (OPERATOR), ET AL., DOCKET NO. G-18077; H. B. LIVELY (OPERATOR), ET AL., DOCKET NO. CI62-1220

ORDER CONDITIONALLY APPROVING SETTLEMENT PROPOSAL AND CONDITIONALLY ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 8, 1965)

On November 3, 1964, H. B. Lively (Operator), *et al.* (Lively) filed an offer of settlement and motion for severance of its Docket No. CI62-1220 from the consolidated proceedings of H. L. Hawkins and H. L. Hawkins, Jr., Operator, *et al.*, G-18077, *et al.* and also applied for issuance of a permanent certificate of public convenience and necessity in accordance with the provisions of the proposed settlement agreement.

On April 13, 1962, Lively applied for a Certificate of Public Convenience and Necessity pursuant to Section 7(c) of the Natural Gas Act, to make sales of natural gas to Tennessee Gas Transmission Company (Tennessee) from leases located in the Columbus Field, Colorado County, Texas. The leases described in this application were acquired from Sinclair Oil and Gas Company (Sinclair).

At the time Lively acquired these leases, Sinclair was making sales of gas to Tennessee therefrom, pursuant to its certificate issued by the Commission at Docket No. G-4676, Lively, subsequent to its acquisition of these leases, on April 13, 1962, filed at Docket No. CI62-1220, an Application for Temporary and Permanent Certificate of Public Convenience and Necessity requesting authorization to continue the sale from this field to Tennessee. The Commission, on May 16, 1962, at Docket No. CI62-1220, granted Lively a temporary certificate to commence this sale.

By order issued March 30, 1964, the Commission consolidated Docket No. CI62–1220 with other pending District No. 3 certificate applications for formal hearing in the H. L. Hawkins and H. L. Hawkins, Jr. (Operator), *et al.* proceedings.

Lively received its temporary authorization to commence deliveries at a rate of 15.95016¢, conditioned to possible refunds to a floor of 13.2782¢. This condition was imposed, since Lively was assigned the acreage involved by Sinclair Oil & Gas Company, which was collecting 15.95016¢ subject to refund in Docket No. G–17141 (*i.e.*, the rate was under suspension). Sinclair's last accepted rate at the time of assignment to Lively was 13.2782¢.

Lively requests that the Commission sever its certificate application and issue a permanent certificate at an initial contract price of 15.0¢ per Mcf (less .21931¢ per Mcf dehydration charge) for the period of initial delivery to the termination of the contract. Tennessee Gas Transmission Company has joined with Lively in the submittal of the settlement proposal, under which Lively proposes to eliminate all future price escalation provisions from its Rate Schedule No. 3 and to substitute herein a life-of-contract rate of 15.0¢ (subject to a 0.21931¢ dehydration charge deduction). The primary term of the contract will expire on January 1, 1970. The proposed offer of settlement would afford Lively the same settlement rate received by Sinclair when Docket No. G–17141 was terminated in Sinclair's company-wide settlement.[1]

Lively further proposes to refund to Tennessee an amount computed by multiplying the difference between the price of 15.95016¢ per Mcf and the price of 15¢ per Mcf (less .21931¢ per Mcf dehydration charge) by the volumes of gas delivered under Lively's FPC Gas Rate Schedule No. 3 from the date of initial delivery to the date of issuance of the order herein. Interest upon said amount refunded shall be paid at the rate of 7% per annum. No interest shall accrue on this refund after November 1, 1964.

Insofar as Lively proposes to terminate the refund obligation as of November 1, 1964, the settlement proposal deviates from our standard policy. The refund obligation must extend to the date of the issuance of the order herein.

It further appears that Lively should be required to deposit the refunds due Tennessee in an appropriate number of savings accounts pending further Commission order.

The Commission finds:

(1) H. B. Lively (Operator), *et al.*, is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) H. B. Lively (Operator), *et al.*, is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the

---

[1] Order issued July 1, 1963, in Docket No. G–9261, *et al.*, 30 FPC 5.

public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Lively be required to submit the report and account for the refunds and interest as ordered below.

The Commission orders:

(A) Docket No. CI62-1220 is hereby severed from the consolidated proceedings of H. L. Hawkins and H. L. Hawkins, Jr., Operator, *et al.*, Docket No. G-18077, *et al.*

(B) A certificate of public convenience and necessity is hereby issued to H. B. Lively (Operator), *et al.*, upon the conditions set forth herein authorizing the sales of natural gas in interstate commerce for resale, as proposed, and as modified by the settlement proposal and this order, and for the construction and operation of any facilities described in the application and settlement proposal herein.

(C) The certificate herein issued is granted upon the express conditions that Lively shall (1) file an executed contract amendment eliminating all future price escalation provisions from its Rate Schedule No. 3, and substitute therein a life-of-contract rate of 15.0¢, subject to a 0.21931¢ for Mcf dehydration charge deduction; (2) file a notice of change in rate under its Rate Schedule No. 3 to reflect the proposed settlement rate; (3) compute the refunds due Tennessee in Docket No. CI62-1220 to the date of the order, and submit a report to the Commission and to Tennessee setting forth the details of such computations, showing separately the principal and applicable seven percent interest, the bases used for such determination and the period covered; and (4) Lively shall be required to deposit the refunds due Tennessee in savings accounts, as specified in this paragraph, with no further interest obligation after the date of issuance of the order herein, pending further Commission orders respecting such monies. Each savings account should not exceed $10,000 and should be made in depositories whose accounts are insured to the extent of $10,000 by an agency of the Federal Government.

(D) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposal, as supplemented.

(E) The certificates herein issued are not transferable and shall be effective only so long as Lively continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) The grant of certificates herein and approval of the settlement proposal, as supplemented, is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Lively, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Lively, the Commission staff, or any affected party herein in any other proceeding.

(G) Upon full compliance of Lively with all the terms of this order and of the settlement proposal, Lively shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(H) The certificate granted by paragraph (B) above is granted upon the express condition that Lively comply fully with the terms of this order and the settlement proposal as modified herein, which settlement is expressly approved subject to the conditions of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

HOUSTON NATURAL GAS PRODUCTION COMPANY, DOCKET NOS. RI64–799 AND RI65–1

ORDER ACCEPTING OFFERS OF SETTLEMENT AND TERMINATING PROCEEDINGS

(Issued January 8, 1965)

By orders issued June 26, 1964 in Docket No. RI64–799 and July 15, 1964 in Docket No. RI65–1 the Commission suspended for one day two increased rate proposals,[1] from 14.0¢ to 15.0¢ per Mcf, of Houston Natural Gas Production Company (Houston) for its jurisdictional sales of natural gas from various fields in Texas District No. 4 to its affiliated pipeline purchaser, Valley Gas Transmission, Inc. (Valley Gas). In these orders, the Commission deferred action on the offers of settlement which accompanied the increased rate proposals. Houston, in its offers of settlement, proposed that in return, for permitting a life-of-contract settlement rate of 15.0¢ per Mcf under the subject rate schedules, it will eliminate from the related contracts the periodic price escalation provisions.

Houston and Valley Gas, by letters to the Secretary of the Commission dated October 12, 1964 and November 17, 1964, respectively, agreed that approval of the proposed settlement would not constitute a predetermination of the issue of the proper allowance for gas purchase costs in any future Valley Gas rate proceeding. Long Island Lighting Company, the only intervener in these proceedings, has indicated it does not oppose the settlement proposals.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1 issued December 20, 1960, 24 FPC 1107 as amended by Order No. 264, issued March 27, 1963, 29 FPC 589. While we do not necessarily adhere to the policy statement in producer cases involving affiliation with the buyer, in view of the agreement tendered by Houston and Valley Gas to leave open the question of the proper allowance for gas purchase costs by Valley Gas, we think acceptance of Houston's offer would serve the public interest.

We desire to make it clear that our acceptance of Houston's offers of settlement shall not be considered determinative of the proper allowance for gas purchase costs which may arise in any future Valley Gas rate proceedings as agreed herein by Houston and Valley Gas, and shall not be construed as approval of any future increased rate filed by Houston in accordance with its reservation of the right to file increases to cover future tax increases, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate or other similar proceedings, involving Houston's rates and rate schedules.

---

[1] Designated as: Supplement No. 3 to Houston Natural Gas Production Company's FPC Gas Rate Schedule No. 5 which became effective on June 29, 1964, subject to refund in Docket No. RI64–799; and Supplement No. 5 to Houston Natural Gas Production Company (Operator), *et al.* FPC Gas Rate Schedule No. 14 which became effective on July 17, 1964, subject to refund in Docket No. RI65–1.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offers of settlement filed with the Commission by Houston in said proceedings, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offers of settlement filed with the Commission by Houston in the above-designated proceedings are hereby approved in accordance with the provisions of this order.

(B) Houston shall file, within forty-five days from the date of issuance of this order, contractual amendments eliminating the periodic price escalation provisions from its Rate Schedule Nos. 5 and 14 as specified in its offer of settlement. The contractual amendments shall be submitted in accordance with Part 154 of the Commission's regulations under the Natural Gas Act.

(C) The settlement rate of 15.0¢ per Mcf at 14.65 psia shall be effective without refund obligation as of June 29, 1964 under Houston's FPC Gas Rate Schedule No. 5, and as of July 17, 1964 under Houston's FPC Gas Rate Schedule No. 14, and the proceedings in Docket Nos. RI64–799 and RI65–1 shall be deemed terminated upon notification by the Secretary of the Commission that Houston has complied with the terms and conditions of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

HYDROELECTRIC LICENSES—APPLICATIONS—RECREATION PLAN EXHIBITS, DOCKET NO. R–269

ORDER NO. 292

CLARIFYING § 4.41, EXHIBIT R, RECREATION DEVELOPMENT PLANS, REGULATIONS UNDER THE FEDERAL POWER ACT

(Issued January 8, 1965)*

Since June 1, 1963,[1] the Commission has required applications for major licenses under Part I of the Federal Power Act to be accompanied by a recreation plan. This order effects a clarification of the requirement by specifying with more particularity the information which these exhibits should contain. The present rule, set out in § 4.41 of the Regulations under the Federal Power Act (18 CFR 4.41) provides:

> *Exhibit R.* A proposed plan for full public utilization of project waters and adjacent project lands for recreational purposes so far as consistent with proper operation of the project for the development of water power and other public purposes. For projects where lands of the United States will be affected, the proposed plan shall be prepared after consultation with the agency having supervision over those lands. On other lands, the plan shall be prepared after consultation with appropriate State and local agencies. The plan shall show the location of the project lands and waters proposed by the applicant for camping, picnicking, bathing, boating, fishing, hunting

---

*Published in the Federal Register on January 15, 1965 (30 F.R. 523).

[1] Order No. 260–A, Docket No. R–223, 29 FPC 777, 28 F.R. 4092.

and similar recreational activities. It shall include provisions for sanitary facilities, boat-launching ramps and access roads and trails. The applicant shall indicate the facilities it proposes to provide at its own cost consistent with the economics of the project and the potential recreational opportunities.

The purpose of the requirement is to enable the Commission to determine whether the recreational potential of the national resources to be devoted to licensed projects will be adequately developed, consistent with power development and other public purposes, in compliance with the directive in section 10(a) of the Federal Power Act. To be adequate for its purpose, the *Exhibit R* should include:

(1) A map of the project area; (2) a statement of the extent of consultation and cooperation with appropriate Federal, State, and local recreation authorities; (3) notations on the map of the location and nature of the present and planned facilities and which of these are to be supplied by the licensee; and, (4) estimates of public recreational utilization of the project.

The experience of the Commission indicates that under the present text of the rule, applicants are uncertain as to the nature of the requirement. Of the 64 *Exhibit R* filings received to date, only 35 at most could be considered acceptable. Though some have included maps, many have not, probably as a result of the absence of the word "map" in the present rule. In addition, many of the exhibits filed gave no indication of the extent of consultation and cooperation with appropriate government agencies, which is clearly directed by the present rule.

Our conclusion that a clarification of the requirement will bring about the submission of acceptable *Exhibit R's* is supported by the fact that those applicants who have been advised by letter that their original *Exhibit R's* were not acceptable have cooperated fully in furnishing to us the additional material needed to complete their filings.

The Commission further finds:

(1) This clarification of an existing rule which was adopted in compliance with the requirements of section 4 of the Administrative Procedure Act in a rule-making proceeding (Docket No. R-223) after notice and the opportunity to submit written comments, which were received and considered by the Commission, does not require further prior notice to be consistent and in compliance with that act.

(2) In view of the foregoing, it is necessary and appropriate for the purposes of the Federal Power Act that *Exhibit R* be clarified as set forth below.

The Commission, acting pursuant to the Federal Power Act, as amended, particularly sections 4, 9, 10, and 309 thereof (41 Stat. 1065, 1068; 49 Stat. 858; 16 U.S.C. 797, 802, 803, 825h), *Orders:*

(A) The text following the first sentence of *Exhibit R*, § 4.41, Subchapter B, Chapter I, Title 18 of the Code of Federal Regulations is amended as set out below. As so amended, the paragraph will read:

§ 4.41 Required exhibits.

* * * * * * *

Exhibit R. A proposed plan for full public utilization of project waters and adjacent lands for recreational purposes so far as consistent with proper operation of the project for the development of water power and other public purposes. The exhibit shall include:

(1) A map or maps on an appropriate scale, one of which covers the entire project area, clearly delineating by use of symbols, shading, cross-hatchings, etc.

(a) The location of project lands and waters (i) already developed, (ii) designated for initial development, and (iii) those ultimately planned for recreational use.

(b) The location, type, and number of the various recreational facilities in existence and those planned for immediate development, *i.e.*, access roads and trails, and facilities for camping, picnicking, bathing, boating and boat launching, fishing, hunting, and similar recreational activities, as well as provisions for sanitation and waste disposal.

(c) The location, type, and number of the various recreational facilities planned for future development according to anticipated demand. (These plans may be revised during the license period subject to approval by the Commission.)

(2) On the map, or on separate sheets to be filed as part of the exhibit, the following information:

(a) Which of the facilities shown are to be provided by the applicant or licensee at its sole cost, or in cooperation with others, consistent with the economics of the project and the potential recreational opportunities.

(b) Estimated present or initial recreational use and projected ultimate recreational use, in daytime or overnight visits. (These figures will be used in the economic analysis of the project.)

(c) The nature and extent of consultation and cooperation with Federal agencies having supervision over lands of the United States affected by the project and with appropriate State and local agencies. Copies of cooperative agreements entered into with such agencies shall be included as part of the *Exhibit R*.

(3) Except to the extent and in such particulars as the requirements may be expressly waived or modified by the Commission, *Exhibit R* maps are to be filed in conformity with the specifications for drawings contained in § 4.42.

(B) The amendment herein ordered shall be effective upon issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP61-92; NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP61-139

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 11, 1965)

On September 26, 1960, as amended on May 22, 1961 and September 14, 1961, El Paso Natural Gas Company (El Paso), P.O. Box 1492, El Paso, Texas, filed in Docket No. CP61-92 and on November 3, 1960, as amended on June 5, 1961 and September 15, 1961, Northern Natural Gas Company (Northern), 2223 Dodge Street, Omaha, Nebraska, filed in Docket No. CP61-139 their respective applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the construction and operation of facilities for the acquisition, exchange and transportation of certain volumes of natural gas at several points on Northern's system in Ochiltree County, Texas, as a portion of the 50,000 Mcf of gas ultimately authorized to be exchanged at the Beaver

County exchange point, as well as additional delivery points in Ochiltree County, Texas, all as more fully set forth in the applications as amended on file with the Commission.

The applications as amended reflected that, El Paso and Northern being parties to an agreement covering the exchange up to 475,000 Mcf per day of gas that El Paso is presently delivering to Northern on an exchange basis, seek authority to construct and operate facilities for the transportation, delivery and receiving in Ochiltree County, Texas, of a portion of the gas now being delivered in Beaver County, Oklahoma. El Paso proposes to construct and operate necessary pipeline of 3½–4½-inch diameters and the necessary appurtenances and Northern proposes to construct and operate the necessary taps and valves to receive such gas in its system, all as more fully set forth in the applications, supplements and amendments thereto.

The estimated cost of the facilities proposed by El Paso is about $276,300 and to Northern about $5,200 which will be financed from funds on hand.

The facilities for which authorization in the applications as supplemented and amended is sought have been constructed and placed in operation under temporary certificates of authorization issued to El Paso and Northern respectively on February 1, 1961 and December 7, 1961.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on December 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, as supplemented, submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(3) The proposed exchange and delivery of natural gas between El Paso and Northern, the construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed exchange and delivery of natural gas, construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) El Paso and Northern are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon El Paso's and Northern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same is hereby issued to El Paso and Northern, jointly, in this proceeding authorizing the exchange and delivery of natural gas, the construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding upon the terms and conditions of this order.

(B) Certificates issued by paragraph (A) above and the rights granted thereunder is hereby conditioned upon El Paso's and Northern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP61–265; TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP61–299

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 11, 1965)

On April 11, 1961, as supplemented on December 13, 1961, May 29, 1963 and June 19, 1964, El Paso Natural Gas Company (El Paso) a Delaware corporation whose mailing address is P.O. Box 1492, El Paso, Texas, filed in Docket No. CP61–265 an application for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act, as amended, authorizing the construction and operation of certain facilities to be situated in Beaver and Ellis Counties, Oklahoma, and Ochiltree, Roberts, Hemphill and Lipscomb Counties, Texas, and the delivery to Transwestern Pipeline Company (Transwestern), on an exchange basis, of natural gas produced in the foregoing counties, all as more fully set forth in the application, as supplemented, on file with the Commission.

On May 24, 1961, as supplemented on January 22, 1963, August 19, 1963 and July 6, 1964, Transwestern Pipeline Company, P.O. Box 1502, Houston 1, Texas, filed in Docket No. CP61–299 an application for a certificate of public convenience and necessity, as amended, pursuant to Section 7(c) of the Natural Gas Act as amended authorizing the construction and operation of facilities consisting of 6.89 miles of 4½-inch field lines necessary to receive gas from producers in Ochiltree County, Texas, along with necessary high pressure well ties and measuring and regulating facilities extending to its existing full transmission system and line taps with necessary measuring and regulating apparatus to be located at two points of interconnection on its transmission system in order to implement the aforementioned exchange of gas between Transwestern and El Paso, all as more fully set forth in its application, as supplemented, on file with the Commission.

El Paso and Transwestern, either through direct leasehold ownership or gas purchase agreement, have available to them sources of natural gas situated in common or proximate production properties. Those properties appear to be generally contiguous to the respective pipeline systems of either El Paso or

Transwestern in the above counties. By mutual utilization of existing or extended facilities of either party most convenient to any given source, the parties propose to gather natural gas from the subject properties into their respective systems and to make balancing deliveries, as necessary, at two points of interconnection of their facilities in Beaver County, Oklahoma.

The exchange operations will be conducted pursuant to a Gas Exchange Agreement dated February 1, 1961, as amended, which agreement is on file with the Commission as El Paso's Rate Schedule X–12, FPC Gas Tariff, Third Revised Volume No. 2, and Transwestern's Rate Schedule X–1, FPC Gas Tariff, Original Volume No. 2. As presently constituted, the said Exchange Agreement provides for the receipt and gathering of natural gas produced from twenty-seven (27) wells in which either or both parties own an interest.

Based on estimates contained in the application, as supplemented, exchange operations under the authorizations requested contemplate the maximum daily delivery by El Paso for gathering and receipt by Transwestern of approximately 15,897 Mcf (at 14.73 psia) and the maximum daily delivery by Transwestern for gathering and receipt by El Paso of 1,906 Mcf (at 14.73 psia).

The facilities proposed to be constructed by El Paso to effectuate the exchange operations consist of approximately 19 miles of 4½-inch O. D. pipelines and necessary high pressure well ties and measuring and regulating facilities. In addition to those facilities proposed to be constructed, El Paso proposes to utilize approximately 3.14 miles of existing 4½-inch O. D. pipelines and appurtenances.

The estimated cost of all the facilities encompassed in the subject dockets is as follows: El Paso, $404,081 financed out of its current working funds, supplemented by short-term bank loans as necessary; Transwestern $178,691 financed out of available funds.

The facilities for which authorization in the applications, as supplemented, is sought, have been constructed and placed in operations under temporary certificates of authorization to El Paso and Transwestern on August 8, 1961, as amended on September 18, 1963 and July 30, 1964.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on December 30, 1964, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order accompanying Opinion No. 328 issued August 10, 1959 (22 FPC 391, 402).

(3) The proposed exchange of natural gas between the Applicants, and the construction and operation of the proposed facilities for the receipt and delivery of such exchange of natural gas in interstate commerce, as hereinbefore described and as more fully described in the applications and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed exchange and delivery of natural gas and the construction and operation of facilities are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to the Applicants in this proceeding, jointly authorizing the exchange and delivery of natural gas as hereinbefore described, and the construction and operation of facilities for the exchange of such natural gas in interstate commerce, as more fully described in the applications and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) Certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and in actual operations, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within 3 months of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

INDIANA & MICHIGAN ELECTRIC COMPANY, DOCKET NO. E-7089

ORDER DENYING AN APPEAL AND GRANTING, IN PART, EXTENSION OF TIME FOR FILING OF BRIEFS ON EXCEPTIONS

(Issued January 11, 1965)

On December 28, 1964, Indiana & Michigan Electric Company (Company) filed two documents with the Commission: (1) "An Appeal From The Presiding Examiner's Ruling Of December 16, 1964 Denying Respondent's Motion Of August 24, 1964 To Defer Further Action Pending Congressional Consideration Of S. 2028 and S. 3038" (Appeal), and (2) a "Motion For Extension Of Time To File Brief On Exceptions" (Motion). On December 29, 1964, staff counsel filed its objections to both the appeal and the motion, indicating, however, no opposition to a reasonable extension of time of 10 days. We shall dispose of both filings in this order.

Company's appeal lies from its motion to the examiner to defer issuance of the initial decision in this case. Thus, technically, the initial decision having been issued, the appeal is moot. However, we shall treat the appeal as a motion to the Commission to defer further action in this case pending Congressional action on the above-cited legislative proposals.

Company submits that legislation is pending before the Congress which, if enacted, would remove the transactions here at issue from our jurisdiction. It further submits that the Commission has deferred action in similar cases now pending before the Commission in deference to the pendency of similar legislation. Specifically, it cites our order of August 6, 1964 in the *Dairyland Cooperative, et al.*, proceeding, Docket No. E–7113, 32 FPC 529. In that case we directed the examiner to defer issuing his initial decision until January 1, 1966, in order that "further Congressional consideration" could be given to the bill S. 2028 then pending before the Congress.

Our order in the *Dairyland* proceeding is clearly distinguishable from that requested by the Company here. S. 2028 was intended to clarify the Congressional intent regarding our authority to regulate rural electric cooperatives as public utilities, a matter which had never been resolved by this Commission or the courts and which constituted the essential issue in the *Dairyland* proceeding. In contrast, in the instant proceeding Company admits it is a public utility subject to the jurisdiction of this Commission and the recent *Colton* case[1] and the other U.S. Supreme Court decisions cited therein make our jurisdiction over its wholesale rates clear if the record here establishes as a matter of fact, that the sales in issue are sales for resale in interstate commerce. Thus, the Company asks us to defer the exercise of our responsibility under existing law, pending possible Congressional action to change our jurisdiction. We think any such action would clearly be inconsistent with our responsibilities under the Federal Power Act.

Company's motion requests an additional 45 days within which to file its brief on exceptions. Company asserts that this extension of time is necessary because of the pressure of other work; the complexity of this proceeding, and the magnitude of the record. Staff strongly opposes such a lengthy extension of time. As staff counsel properly points out, the case is almost two years old and it is in the public interest that it be decided as promptly as possible. It is reasonable to assume that at this stage of the proceeding the Company is fully conversant with the record. In deference to Company's urgent plea an extension of time will be granted, but only to January 28, 1965. The Secretary has already been directed to give notice thereof to Company.

The Commission finds:

(1) The deferral of further action in this proceeding, pending Congressional consideration of S. 2028 and S. 3038, would not be in the public interest.

(2) The granting of an additional 45 days for the filing of briefs on exceptions would not be in the public interest.

(3) A short extension of time for the filing of briefs on exceptions is fair and reasonable.

The Commission orders:

(A) The appeal of the Company of December 28, 1964 is hereby denied.

(B) The time for the filing of briefs on exceptions is extended to January 28, 1965.

EXPENDITURES FOR POLITICAL PURPOSES—REPORT FORMS PRESCRIBED FOR ELECTRIC UTILITIES, LICENSEES AND NATURAL GAS PIPELINE COMPANIES—FPC FORMS NOS. 1-F, 1-M AND 2-A, DOCKET NO. R-263

ORDER NO. 293

AMENDING ANNUAL REPORT FPC FORMS NOS. 1-F, 1-M AND 2-A

(Issued January 11, 1965)*

The Commission, on December 18, 1963, amended Account 426, Other income deductions, of the Uniform System of Accounts prescribed for all classes of electric utilities, licensees and natural gas companies (Order No. 276, Docket No. R-226, 30 FPC 1539, 28 F.R. 14265). At the same time new schedules relating to expenditures classified in Account 426 were prescribed for inclusion in FPC Forms Nos. 1 and 2 filed by Classes A and B electric utilities and natural gas companies. We are now in this order prescribing generally similar schedules for inclusion in the report forms required to be filed by Classes C and D electric and natural gas companies and municipal electric utilities. These amendments to the forms provide for more detailed annual reporting of the various categories of income deductions into which Account 426 was subdivided by our Order No. 276.

Following the issuance of a notice of proposed rulemaking, issued herein on June 1, 1964 (29 F.R. 7730, June 5, 1964), a single response was received—from the Department of Public Utilities, City of Tacoma, Washington. We are adopting the two clarifying changes it suggested.

The Commission finds:

(1) The amendments herein adopted are necessary and appropriate for the purposes of the administration of the Federal Power and Natural Gas Acts.

(2) Since it is desirable that the amendments to Forms 1-F, 1-M and 2-A be made available for the reporting year 1964, good cause exists for making them effective forthwith.

The Commission, acting pursuant to the authority granted by the Federal Power Act, as amended, particularly sections 4(a), 304, 309 and 311, thereof (16 U.S.C. 797(a), 825c, 825h, 825j), and by the Natural Gas Act as amended, particularly sections 10 and 16 thereof (15 U.S.C. 717i, 717o), *orders:*

(A) Paragraph (c) of the §§ 141.2, 141.7 and 260.2, Chapter I, Title 18 of the Code of Federal Regulations, are amended, respectively, by inserting, to precede the line "Verification" in §§ 141.2(c) and 260.2(c), and at the end of § 141.7(c), a line reading "Expenditures for Certain Civic, Political and Related Activities."

(B) The annual reports, F.P.C. Forms Nos. 1-F and 2-A, prescribed for Classes C and D public utilities, licensees, and natural gas companies, by such §§ 141.2 and 260.2, respectively, are amended as follows:

(1) Effective for the reporting year 1964, a new schedule "Expenditures for Certain Civic, Political and Related Activities," as set out in Attachment A hereto,** is added at an appropriate point in each of the Forms Nos. 1-F and 2-A.

(2) On page 5 of each of the said Forms Nos. 1-F and 2-A, lines 27, 28 and 29 are revised to read as follows:

"27—Miscellaneous income deductions
28—Miscellaneous amortization

---

*Published in the Federal Register on January 19, 1965 (30 F.R. 605).

**Omitted in printing.

29—Other income deductions (Subaccount 426.4 of $____ included, see page —).

(C) Effective for the reporting year 1964 the annual report for municipal electric utilities, F.P.C. Form No. 1–M, prescribed by the said § 141.7 is amended—

(1) by adding, at an appropriate point therein, a new schedule "Expenditures for Certain Civic, Political and Related Expenditures," as set out in Attachment B hereto;*

(2) by amending line 19 of the schedule "Condensed Income Statement" on page 3 of such Form 1–M to read as follows:

"19—*Other income deductions (see schedule, page —, Expenditures for Certain Civic, Political and Related Activities)."

(D) The amendments herein made shall be effective upon the issuance of this order.

(E) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Commissioner Black *concurring* for the reasons set forth in his statement accompanying Order No. 276 issued December 18, 1963, in Docket No. R–226.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP62–293

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 11, 1965)

On June 11, 1962, as supplemented on July 9, 1962, Transwestern Pipeline Company (Applicant) filed in Docket No. CP62–293 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to Pioneer Natural Gas Company (Pioneer), and the construction of certain pipeline facilities, all as more fully set forth in the application.

Applicant proposes sales to Pioneer pursuant to Applicant's right-of-way service Rate Schedule RW–1, and proposes construction of pipeline tap valves incident to the sales. Natural gas will be delivered to Pioneer at various points on Applicant's existing pipeline facilities, and will be resold by Pioneer through its distribution facilities to farm customers for domestic and irrigational purposes.

Applicant proposes to deliver gas to Pioneer at eight points where pipeline taps now exist on Applicant's 24-inch Panhandle lateral in Carson, Castro, Potter, Randall and Deaf Smith Counties, Texas. In addition, Applicant proposes to construct approximately five pipeline tap valves and deliver gas to Pioneer at such points on Applicant's 24-inch Panhandle lateral in Gray, Parmer, and the aforesaid counties as may be necessary to serve all unconnected granters of easements and rights-of-way for said lateral who have reserved a right to have a pipeline tap installed on such easement, and at such other points as may be mutually agreed upon from time to time by the parties.

The estimated annual and peak day sales to Pioneer for the initial three year period are stated to be:

	First Year	*Second Year*	*Third Year*
Annual (Mcf)	20,000	32,000	52,000
Peak Day (Mcf)	525	840	1,365

---

*Omitted in printing.

The estimated cost of the taps to be installed is as follows:

Size taps:	*Total Cost*
1-inch	$350
2-inch	750
3-inch	870
4-inch	1,025

The cost of the proposed facilities will be defrayed initially by Applicant, but Pioneer will reimburse Applicant for such costs.

A temporary certificate was issued to Applicant in this docket by Commission letter dated August 10, 1962, authorizing construction of farm taps required for irrigational purposes.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 30, 1964 the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G-14871, *et al.*, (22 FPC 391).

(2) The proposed transportation and sale of natural gas, and the proposed construction of facilities, as hereinbefore described, as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed transportation and sale of natural gas and the construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's reporting, within 30 days after each new tap is constructed, the location, actual cost, and estimated annual sales to be rendered thereby; and upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms set forth in paragraph (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Transwestern Pipeline Company, authorizing the transportation and sale of natural gas to Pioneer Natural Gas Company, and authorizing the construction and operation of the proposed facilities hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's reporting, within 30 days after each new tap is constructed, the location, actual cost, and estimated annual sales to be rendered thereby; and upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms set forth in paragraph (e) of Section 157.20 of such Regulations.

OPINION NO. 447

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61-1, ET AL.

MEMORANDUM OPINION AND ORDER REJECTING MOTION TO DISQUALIFY VICE CHAIRMAN DAVID S. BLACK

(Issued January 12, 1965)*

Syllabus

1. Where charges are made that Commissioner prejudged vital issue in case and evinced personal bias and prejudice against independent producers as a class and Commissioner filed statement denying such bias, Commission (on assumption it has requisite authority), finds no basis shown for disqualifying Commissioner from participating in proceeding. P. 44.
2. Fact that Commissioner's challenged remarks were made in context of discussion of whether existing provision of Natural Gas Act should be amended is relevant to question of prejudgment of issues. P. 44.
3. View that competition between producers is insufficient to justify repeal of regulatory jurisdiction does not imply rejection of competition as a factor in regulation nor does it prejudge question of proper rates for sales by producers in proceeding, or weight to be given to their evidence in fixing such rates. PP. 44, 45.
4. Disagreement with producer efforts to seek amendatory legislation does not demonstrate personal bias against producers as a class. P. 45.
5. There would be no basis for disqualifying Commissioner even assuming he comes to proceeding with advance views as to some important matters in issue. P. 45.
6. Even were this an adjudicatory proceeding, Commissioner's prior expression of views on a general question of fact, policy or law which might be involved would not disqualify him from further participation. P. 46.
7. In a rate-making proceeding, (essentially a legislative function and part of rule-making) an expression of views on general question which may be in issue or opposition to amendatory legislation could not be disqualifying. P. 46.
8. Commission has duty and obligation to inform Congress and general public of its programs and policies. P. 46.
9. Regulatory commissions were created by Congress in order that regulatory statutes could be administered by men who had or would acquire intimate knowledge of the industry they were regulating. P. 46.
10. *Observing* there is difference between informed and closed minds, Commission *notes* an opinion is not a prejudice or prejudgment when held by someone required and accustomed to hold all opinions subject to confirmation or rejection in light of proof. P. 47.

---

*Reconsideration and Stay denied by orders issued February 9, 1965 and February 12, 1965, 33 FPC 198, 204.

11. Regulatory process assumes that fair and intelligent decisions will be reached by Commissioners because of familiarity with special fields in which they operate and not despite it. P. 47.
12. Commission *rejects* motion to disqualify Vice Chairman David S. Black.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

On December 18, 1964, a number of the respondents in this proceeding filed a motion seeking to have Vice Chairman Black excuse himself from further participation in this proceeding or, in the alternative, for the Commission to disqualify the Commissioner from such participation. The stated grounds for the motion are that the Commissioner has prejudged a vital issue in the case and evinced personal bias and prejudice against independent producers as a class.

Commissioner Black has filed a statement, *supra*, p. 14, in which he denies any personal bias against the respondents and asserts that he will be fully able to perform his duty of reaching a proper determination in this proceeding.

While the authority of the Commission to pass upon the qualification of one of its members to participate in a particular case has not been determined,[1] we shall proceed upon the assumption that we would have such authority in an appropriate situation. We are convinced, however, that no basis has been shown here for disqualifying Commissioner Black.

The thrust of the motion is that in an address Commissioner Black made on September 16, 1964, in which he answered arguments appearing in the trade press in support of legislation then pending before Congress to repeal or limit the Commission's jurisdiction over gas producers, he expressed the view that competition among independent producers was not adequate as a substitute for price regulation by this Commission pursuant to the provisions of the Natural Gas Act. The respondents are contending in the instant proceeding involving the determination of just and reasonable producer rates that a considerable degree of competition exists among producers in the sale of gas to the interstate pipelines, and that such competitive forces should in large part be allowed to determine the just and reasonable price for gas in the Permian Basin. They now contend that the Commissioner has prejudged what they consider an essential element of their case. No contention is made that the Commissioner is personally biased against any particular producer, but it is alleged that he has shown bias against independent producers as a class in his comments in the address on the efforts of independent producers to seek legislation to remove the Commission's existing jurisdiction to fix the rates at which they sell gas in interstate commerce.

We think, contrary to the position of the respondents, that the fact that Commissioner Black's remarks were made in the content of a discussion of whether the existing provisions of the Natural Gas Act should be amended is relevant in determining whether he has prejudged the issues presented in this proceeding. Obviously the context in which his remarks were made cannot be ignored. The expression of the view that competition between independent producers is insufficient to justify repeal of our regulatory jurisdiction does not imply the rejection of competition as a factor in regulation. Such a conclusion on the legislative question is hardly a novel point of view. It has been held by the courts to be only a statement of the basic assumption underlying the existing law. Thus the Fifth Circuit Court of Appeals has indicated that "* * * the only justification for giving the Commission the duty to regulate prices was the determination by Congress that the producers have a supply that is so restricted in relation to demand that they have the economic power to bargain for prices that will be injurious to the public" (*United Gas Improvement Co.* v. *F.P.C.*, 290 F. 2d 133–135 (1961)).

---

[1] There is a division of authority among the regulatory commissions which have been required to pass upon this problem. The Federal Communications Commission (see *In the Matter of Segal and Smith*, 5 F.C.C. 3 (1937)) and the Civil Aeronautics Board (see *Colonial Airlines, Inc., Motions* 9 C.A.B. 273 (1948)) have held that they do have the power. See also *Berkshire Employees Association* v. *National Labor Relations Board*, 121 F. 2d 235–239 (CA3–1941). The Securities and Exchange Commission, on the other hand, has held that it does not (see *Otis and Co.*, 31 S.E.C. 380 (1950); *The United Corp.*, 32 S.E.C. 633 (1951)).

Obviously in making such statements neither Commissioner Black nor the court have prejudged the altogether different question of the proper rates for sales by the producers in the Permian Basin or the weight to be given the producers' evidence in fixing such rates. It would hardly seem necessary to add that disagreement with producer efforts to seek amendatory legislation does not demonstrate a personal bias against producers as a class.

Even if we assume that the Commissioner comes to this proceeding with advance views as to some of the important matters in issue, there would be no basis for his disqualification. The Supreme Court has discussed this problem in two principal cases. In *United States* v. *Morgan*, 313 U.S. 409, 420–421, an argument was made that the Secretary of Agriculture, who has the authority to fix rates of market agencies under the Packers and Stockyards Act, had shown disqualifying bias against the market agencies in a letter which he had written to the press vigorously criticizing an earlier decision of the Supreme Court which had overruled the Secretary's prior ratemaking decision. In rejecting the motion to disqualify him, the Secretary disclaimed any bias. The Supreme Court went beyond such disclaimer to hold (313 U.S. 421):

> * * * But, intrinsically, the letter did not require the Secretary's dignified denial of bias. That he not merely held, but expressed, strong views on matters believed by him to have been in issue, did not unfit him for exercising his duty in subsequent proceedings ordered by this Court * * * Cabinet officers charged by Congress with adjudicatory functions are not assumed to be flabby creatures any more than judges are. Both may have an underlying philosophy in approaching a specific case. But both are assumed to be men of conscience and intellectual discipline, capable of judging a particular controversy fairly on the basis of its own circumstances. Nothing in this record disturbs such an assumption.

Similarly, in *Federal Trade Commission* v. *Cement Institute*, 333 U.S. 683, 700–703, the Supreme Court rejected a contention of bias directed against members of the Federal Trade Commission in a case where the Commission had ruled that the use of a multiple basing-point system by members of the Institute was in violation of the Clayton Act. See also *Marquette Cement Mfg. Co.* v. *Federal Trade Commission*, 147 F. 2d 589. It was contended that the Commission, in reports to Congress and in testimony by individual commissioners before Congressional Committees, had clearly indicated in advance their view that the basing-point system was illegal and therefore were not in a position to pass upon the matter as presented by the record of a particular case. In rejecting this contention, the court stated (333 U.S. at 702–703):

> There is no warrant in the Act for reaching a conclusion which would thus frustrate its purposes. If the Commission's opinions expressed in congressionally required reports would bar its members from acting in unfair trade proceedings, it would appear that opinions expressed in the first basing point unfair trade proceeding would similarly disqualify them from ever passing on another. See *Morgan* v. *United States*, 313 U.S. 409, 421. Thus experi-

> ence acquired from their work as commissioners would be a handicap instead of an advantage. Such was not the intendment of Congress. For Congress acted on a committee report stating: "it is manifestly desirable that the terms of the commissioners shall be long enough to give them an opportunity to acquire the expertness in dealing with these special questions concerning industry that comes from experience." Report of Committee on Interstate Commerce, No. 597, June 13, 1914, 63d Cong., 2d Sess. 10–11.
>
> * * * * * * *
>
> Neither the *Tumey* decision [*Tumey* v. *Ohio*, 273 U.S. 510] nor any other decision of this Court would require us to hold that it would be a violation of procedural due process for a judge to sit in a case after he had expressed an opinion as to whether certain types of conduct were prohibited by law. In fact, judges frequently try the same case more than once and decide identical issues each time, although these involve questions both of law and fact. Certainly, the Federal Trade Commission cannot possibly be under stronger constitutional compulsions in this respect than a court.

We think these cases make clear that even if this were an adjudicatory proceeding in which the issue presented was whether the respondents had violated some provision of law which would require the imposition of sanctions, a commissioner's prior expression of his views on a general question of fact, policy or law which might be involved in the determination (as distinguished from a specific conclusion of guilt on the part of one or more of the respondents) would not disqualify him from further participation. Similarly, expression of opposition to the respondents' efforts to change the law would not show disqualifying personal bias. *A fortiori*, in a ratemaking proceeding like the present one, which Congress has recognized as an essentially legislative function and, as such, part of our rulemaking activities, an expression of views on a general question which may be in issue in the proceeding or opposition to amendatory legislation could not be disqualifying. See Administrative Procedure Act, § 2(c), 5 U.S.C. 1002(c).

In administrative agencies where commissioners are selected for their expertise, or their ability to acquire expertise with experience, it would be most surprising if a commissioner did not develop opinions on the major issues confronting his agency. To profit by his experience and to be able to explain and justify his position are important ingredients of his responsibilities. If the movants were correct in their position, Congress and the public at large could not look to the men designated to serve on the regulatory agencies for their views on the efficacy and importance of their programs or the merits of existing or proposed legislation.

The public interest would hardly be served if the Commission could be silenced on the question of whether its work is necessary and important merely by the regulated industry raising a related question as an issue in a proceeding before the Commission. The Commission is not merely determining the private rights of litigants but is charged with protecting the overall public interest. It has a duty and obligation to inform the Congress and the general public of its programs and policies.

Regulatory commissions such as the Federal Power Commission were created by Congress so that the regulatory statutes such as the Natural Gas Act could be administered by men who had or would acquire intimate knowledge of the industry they were responsible for regulating. Congress recognized that a basic fund of knowledge was an essential ingredient in making decisions which would protect the public and promote the welfare of the regulated industry. The essence of movants' motion is that the commissioners should begin their deliberation in this proceeding with a completely empty mind on the issues at stake. There is a basic contradiction between such intellectual vacuity and the expert and informed judgment which commissioners are expected to exercise.

There is also a basic difference between an informed mind and a closed one. An opinion is not a prejudice or a prejudgment, at least when held by someone required and accustomed to hold all opinions subject to confirmation or rejection in the light of the proof. Ignorance of the problems involved in the regulatory process or lack of views thereon is not the touchstone to effective and impartial exercise of regulatory judgment. The regulatory process assumes that intelligent and fair decisions will be reached by the commissioners because of their familiarity with the special field in which they operate and not despite it.

The cases cited by the movants are inapposite. Each involved an adjudicatory proceeding in which the issue was whether named respondents had violated the law. In this context it was alleged either that a commissioner (*Texaco Inc.* v. *Federal Trade Commission*, 336 F. 2d 754 (CADC)) or the Commission itself (*Gilligan, Will & Co.* v. *Securities and Exchange Commission*, 267 F. 2d 461 (CA 2)) had indicated a pre-commitment to the guilt of the accused party, or that a commissioner had previously served as a staff member in the investigation which led to the complaint (*Amos Treat & Co.* v. *Securities and Exchange Commission*, 306 F. 2d 260 (CADC); see *Securities and Exchange Commission* v. *R. A. Holman & Co.*, 323 F. 2d 284 (CADC)). The nature of the proceedings and the alleged disqualifying acts thus were essentially different from those involved here.

The motion is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIZENS UTILITIES COMPANY, DOCKET NO. E-7186

ORDER DENYING REQUEST TO NEGOTIATE SALE OF SECURITIES

(Issued January 12, 1965)

On October 15, 1964, Citizens Utilities Company (Applicant), a corporation organized under the laws of the State of Delaware and doing business in the States of Arizona, Colorado, Idaho, Maine and Vermont, with its principal business office in Stamford, Connecticut, filed an application, seeking permission to engage in negotiations for the sale or underwriting of the proposed issuance of $8,000,000 of its First Mortgage Bonds, and requesting that the proposed issuance of Bonds be exempted from the competitive bidding requirements of Section 34.1a(b) of the Commission's Regulations under the Federal Power Act.

The Commission by letter dated November 30, 1964, advised the Applicant that it was unable to grant the request for reasons which would be more fully set forth in an order to be issued.

The Commission's competitive bidding rule was adopted in 1950. Since that time, the marketing of electric utility bonds through competitive bidding has been demonstrated to be the best method of achieving the lowest probable cost in marketing electric utility bond issues of established companies seeking to issue significant amounts of securities. While we have on two prior occasions permitted public utilities proposing to issue mortgage bonds to test the market by negotiating sales, in both instances it subsequently developed that a lower cost of money could be and was achieved by competitive bidding.

The Applicant has not shown that there are any unusual circumstances of a nature that would warrant exempting the proposed bond issue from competitive bidding. The size of the proposed issue, $8,000,000, and the successful financial history of the company would appear to make the issue attractive to various segments of the market and thus conducive to the success of competitive bidding. Certainly there is no basis for assuming that any higher rate would be achieved by opening the issue to competition from other sources in addtion to those with which the company has previously done business.

The Commission finds:

Applicant has not made a sufficient showing that would warrant exempting the sale and underwriting of its proposed $8,000,000 First Mortgage Bond issue from the requirements of Section 34.1a(b) of the Commission's Regulations under the Federal Power Act and the request for exemption and permission to negotiate should be denied.

The Commission orders:

The Applicant's request for permission to negotiate the sale and underwriting of a proposed $8,000,000 Bond issue and request that the Bond issue be exempt from the requirements of Section 34.1a(b) of the Commission's Regulations under the Federal Power Act are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-113

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 12, 1965)

On October 27, 1964, as supplemented December 9, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65-113 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon and remove three 500 horsepower compressor units now installed in its Townsend Compressor Station, Lea County, New Mexico, and one 660 horsepower compressor unit installed in the Snyder Compressor Station, Scurry County, Texas.

Applicant states that the reason for seeking permission to abandon the compressor units above described is that the oil and associated casinghead gas production in the Townsend-Edison Field in Lea County, New Mexico has declined to such an extent that the three compressors in the station which handle the full volumes are no longer needed because transportation of the lesser volumes can be supplied by Warren Petroleum Corporation's Saunders Plant facilities without prior compression. Applicant further states that with respect to the abandonment of the compressor unit in the Snyder Station above-mentioned, it is not needed because the volume of gas now being bought by Applicant from three gasoline plants in Scurry County, Texas has declined to a point where the load can be handled by a single 660 horsepower compressor unit which will remain in operation in the station.

Applicant further states that the four compressor units, above referred to, will be stored and used in other compressor stations in the future.

The estimated cost of removing and storing will be $53,800 for the three Townsend Station units and $8,000 for the single Snyder Station unit, making a total of $61,800, which cost will be financed from current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application, in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment, as hereinbefore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by El Paso Natural Gas Company, of the facilities hereinbefore described, as more fully described in the application, in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of transfer of the facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65–114

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 12, 1965)

On October 27, 1964, as supplemented on December 9, 1964, El Paso Natural Gas Company (Applicant) filed in Docket No. CP65–114 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities, all as more fully set forth in the application on file with the Commission.

Applicant proposes to abandon, by sale to the Navajo Tribe, approximately 7.162 miles of 2⅜-inch O.D. pipeline, a measuring and regulating station, and a tap, all within the Navajo Indian Reservation (Reservation), Apache County, Arizona.

Applicant seeks further authorization to construct and operate a measuring and regulating station, and necessary appurtenances, located at a point adjacent to Applicant's San Juan Mainline at the origin of the pipeline hereinbefore described.

The application states that the proposed abandonment and construction are required by the fact that the Navajo Tribe is succeeding Southern Union Gas Company, (Southern) as purchaser and distributor of natural gas hereinbefore purchased and distributed by Southern to Ganado Indian School and Mission and Kin Li Chee Boarding School, both located on the Reservation. Estimated third year annual and peak day sales are 246,913 Mcf and 1,771 Mcf, respectively.

The purchase price to be paid by the Navajo Tribe for the facilities of Applicant is $20,908 which is the depreciated original cost of such facilities. The estimated cost of the facilities proposed to be constructed by Applicant is $7,260, and will be financed with current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as amended, has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, amendment and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully set forth in the application, as amended, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(6) The facilities to be abandoned by sale to the Navajo Tribe, as heretofore described, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter provided.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities, and to sell natural gas as hereinbefore described, all as more fully described in the application as amended, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable

Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which order issues.

(D) Permission for and approval of the abandonment by sale to the Navajo Tribe by Applicant of the facilities hereinbefore described, all as more fully set forth in the application, as amended, in this proceeding, be and the same are hereby granted.

(E) Applicant shall advise the Commission of the date of said abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER APPROVING REVISED EXHIBIT L DRAWING

(Issued January 12, 1965)

On September 28, 1964, Idaho Power Company, licensee for Project No. 1971, filed for Commission approval a revised tracing of Exhibit L showing temporary fish facilities for the Hells Canyon Development of Project No. 1971.

The principal change is from transporting the upstream migrant fish, after their capture in the trap at the downstream portal of the diversion tunnel over the construction area by an aerial cableway, to a plan for transporting the fish by truck.

The change in program and plans has been studied and reviewed in detail with representatives of the interested fishery agencies, both Federal and State, in a series of meetings. At the request of the fishery agencies, model tests of the proposed fish facilities were conducted by the Washington Institute of Technology, Albrook Laboratory, Pullman, Washington. The State of Idaho, Fish and Game Commission, the Oregon State Game Commission, the Fish Commission of Oregon, and the Department of the Interior, have advised us in writing of their respective concurrences in the proposed change and construction of the temporary fish facilities, as shown on the revised Exhibit L drawing for the Hells Canyon Development. Our staff has studied the revised plans for the temporary fish facilities and recommends approval.

The Commission finds:

The afore-mentioned revised Exhibit L drawing, designated and described as Exhibit L, Sheet 6 of 6 (FPC No. 1971-206), conforms to the Commission's rules and regulations and should be approved as part of the license for Project No. 1971, and Exhibit L, Sheet 6 of 6 (FPC No. 1971-200), now part of the license and which has been superseded. should be eliminated from the license for the project.

The Commission orders:

Exhibit L, Sheet 6 of 6 (FPC No. 1971-206) is hereby approved as part of the license for Project No. 1971, and superseded Exhibit L, Sheet 6 of 6 (FPC No. 1971-200) is hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2082

ORDER APPROVING GENERAL PLAN FOR FISH HATCHERY

(Issued January 12, 1965)

On October 14, 1963, Pacific Power & Light Company, licensee for Project No. 2082, filed for Commission approval a general plan for a fish hatchery to be constructed at the Iron Gate development located on the Klamath River in California.

The plan was submitted pursuant to Article 49 of the license (30 FPC 499, 503) which provides that the licensee shall construct or arrange for the construction, at its expense, of a fish hatchery at Iron Gate development. In addition the article requires the licensee to prepare plans for the hatchery in cooperation with the State of California, Department of Fish and Game of the United States Fish and Wildlife Service, Department of Interior; and to submit the plans to the Commission for approval not later than October 15, 1963. The hatchery is to be constructed within one year from the date of approval of the plans by the Commission.

The plan, which shows the general layout of the hatchery and associated facilities was prepared in cooperation with the Department of Fish and Game and the United States Fish and Wildlife Service, Department of Interior. By letter dated July 20, 1964, the Department of Interior, and by letter of June 17, 1964, the California Department of Fish and Game, advised the Commission of their concurrence in the general plan. In addition, each agency made certain recommendations with respect to the detail design plans, which are not being approved by this order. The licensee advised by letter of October 9, 1964, that it has discussed with the two agencies the several recommendations they have made with respect to detail design plans and stated that it believes that such plans can be drawn satisfactorily on a cooperative basis.

The Commission finds:

It is consistent with the public interest that the general plan for the Iron Gate Fish Hatchery be approved as hereinafter provided.

The Commission orders:

(A) The plan for the Iron Gate Fish Hatchery, as shown on Drawing No. G–9133, entitled Fish Hatchery Site Plan, a copy of which is on file with the Commission, is hereby approved, subject to such reasonable modifications as the Commission may hereafter prescribe to effectuate the provisions of Article 49 (30 FPC, 499, 503), upon the recommendation of the Secretary of the Interior or the California Department of Fish and Game.

(B) In preparing the detailed design plans, the licensee shall cooperate with the California Department of Fish and Game and the United States Fish and Wildlife Service, Department of Interior. If the Licensee and those two agencies cannot agree on the detail design plans, upon petition by any of the parties, the matter shall be resolved by the Commission, after notice and opportunity for hearing.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of this order.

Before Commissioners: Joseph C. Swidler, Chairman: L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-81

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 12, 1965)

On September 25, 1964, Southern Natural Gas Company (Applicant) filed in Docket No. CP65-81 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities, for the purpose of selling and delivering additional quantities of natural gas on both a firm and interruptible basis to Mississippi Chemical Corporation (Mississippi Chemical) at Yazoo, Mississippi, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 6.3 miles of 8⅝-inch loop line, 350 additional horsepower at Applicant's Rankin Station, and compressing facilities of 1,080 horsepower to be installed at Applicant's existing Gwinville Station.

Applicant proposes to use the above-described facilities to enable it to deliver additional quantities of natural gas to the Mississippi Chemical plant, pursuant to a letter agreement between the parties dated August 26, 1964. Present peak day deliveries to Mississippi Chemical will be increased as follows: firm, from 8,000 Mcf per day to 29,000 Mcf per day; interruptible, from 8,000 Mcf per day to 23,000 Mcf per day. Annual quantities will be increased as follows: firm, from 2,920,000 Mcf to 10,270,000 Mcf; interruptible, from 2,509,730 Mcf to 8,159,730 Mcf. All gas volumes are stated at 14.73 psia.

The estimated cost of construction of the proposed facilities is $508,340 and will be defrayed from cash on hand.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Applicant are

subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should be granted on the express condition that the interruptible service authorized hereinafter should be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(7) The certificate issued hereinafter should not entitle Mississippi Chemical to whom firm deliveries are authorized hereinafter to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Southern Natural Gas Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(E) This certificate shall not entitle Mississippi Chemical to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP64-218 (PHASE II)

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 12, 1965)

On March 30, 1964, as supplemented on May 1, July 15 and September 4, 1964, Tennessee Gas Transmission Company (Applicant), filed in Docket No. CP64-218, an application pursuant to Section 7 of the Natural Gas Act for authorization to abandon certain facilities, in part by sale and in part in place, and to construct and operate other facilities (transmission and river crossings), all as more fully set forth in the application and supplements.[1]

Applicant in Phase II of its proposal seeks authorization to (1) abandon by transfer facilities consisting of 316 miles of existing 30-inch transmission pipeline extending from Agua Dulce, Texas, to the Sabine River in Newton County, Texas, with related facilities, (part of 366.7 miles of 30-inch pipeline authorized in Docket No. G-8215, extending from a point in Nueces County, Texas, to a point in Jefferson Davis Parish, Louisiana, and known as the Agua Dulce-Kinder Line) to an affiliate and (2) construct and operate 27.19 miles of 12-inch pipeline extending from Applicant's Bay City Line to the Leabo Plant Line. The volumes of natural gas formerly transported from Agua Dulce to Louisiana for further transportation northward will be transported through its mainline facilities.

Applicant further states the assignment and transfer of the approximately 316 miles of 30-inch pipeline to its affiliate will be made at net book value estimated to be $24,943,000 as of June 30, 1964. The cost of the 27.19 miles of 12-inch pipeline to be constructed is stated to be $1,551,500 (inclusive of direct cost, contingencies, overhead and interest charges) and will be financed from funds placed in escrow resulting from the disposition of the Agua Dulce-Sabine facilities or a revolving credit fund.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorizations sought herein, and upon consideration of the record, finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket No. G-910 (6 FPC 777).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding (Phase II), are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof

---

[1] Phase I facilities proposed to be abandoned and to be constructed and operated by Applicant were authorized by order of the Commission issued June 26, 1964, 31 FPC 1590. Notice of the proposals published May 27, 1964 (29 F.R. 6967).

by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Tennessee Gas Transmission Company, to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP64-218 (Phase II), upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 9 months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP64-218 (Phase II), be and the same is hereby granted.

(E) Applicant shall advise the Commission of the date of the abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP65-132

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 13, 1965)

On November 9, 1964, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP65-132 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of natural gas facilities for the sale of natural gas to direct customers and distribution customer consumers and for miscellaneous rearrangements not resulting in any change of service rendered by means of the facilities involved, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct approximately 200 pipeline taps on its existing system to deliver natural gas to individual domestic and commerical customers or for new town border connections or rural extensions to consumers, and approximately 150 pipeline taps, and under proper conditions service lines or market laterals, for direct sales to consumers for road building, irrigation, agriculture, processing and general use in areas outside of local distributor's franchise areas. Applicant also proposes to construct facilities necessary for a maximum of 25 miscellaneous rearrangements.

The total cost of facilities proposed under this application will not exceed a maximum of $300,000 and the total deliveries to any one consumer will not exceed a maximum of 100,000 Mcf of natural gas per year.

The application indicates that the construction projects for which authorization is requested will not increase the capacity of Applicant's transmission systems and will not provide for any additional or increased gas sales volumes under jurisdictional rate schedules. Further, none of the gas delivered pursuant to this order will be used by any consumer for boiler fuel purposes, as defined by subparagraph (9) of Section 157.7(c) of the Commission's Regulations.

The estimated cost of the proposed facilities will be financed with current funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be con-

structed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with subparagraph (8) of Section 157.7(c) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter should be conditioned upon Applicant's compliance with the provisions of subparagraph (7) of Section 157.7(c) of the aforesaid Regulations.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Arkansas Louisiana Gas Company, to construct during the calendar year 1965 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities to sell natural gas to direct customers as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (8) of Section 157.7(c) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued by paragraph (A) above is expressly conditioned upon Applicant's compliance with the provisions of subparagraph (7) of Section 157.7(c) of the aforesaid Regulations and, further, shall not entitle any industrial customer to whom firm deliveries are authorized therein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP65-133

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 13, 1965)

On November 9, 1964, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP65-113 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of routine field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new and existing supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $3,505,444, with no single project to exceed a cost of $500,000, which costs are proposed to be financed from current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,505,444, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Arkansas Louisiana Gas Company, to construct during the calendar year 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,505,444, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-137

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 13, 1965)

On November 13, 1964, Cities Service Gas Company (Applicant) filed in Docket No. CP65-137 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of routine field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $3,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed from treasury cash.

On December 11, 1964, the State Corporation Commission of the State of Kansas filed a notice of intervention in the subject proceeding; however, on December 31, 1964, said notice was withdrawn.

After notice, no petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3)Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct during the calendar year 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-152

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 13, 1965)

On November 23, 1964, Cities Service Gas Company (Applicant) filed in Docket No. CP65-152 an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during calender year 1965, and operation of small field compressor units on its gathering laterals in various gas producing fields connected to Applicant's system in order to take into its certificated main pipeline system natural gas which it has contracted to take from producers in these fields, all as more fully set forth in the application in this proceeding.

The compressor units to be installed will range from 200 to 500 horsepower and the size and number of compressor units to be installed will vary from field to field. Applicant states that such compressor facilities are required due to the normal decline in well-head working pressures of the wells in various fields connected to Applicant's gathering systems, thus requiring Applicant to reduce the working pressures in such gathering systems to enable it to receive volumes of gas required to be taken from each producing area in order to meet the requirements of Applicant's customers.

The total estimated cost of the facilities to be installed will not exceed $500,000, nor will the cost of compressor units for any single producing field exceed $200,000. Applicant proposes to finance construction with treasury cash.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500.000, with no single project to exceed a cost of $200,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct during the calendar year 1965 the proposed compressor facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted by paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $500,000, with no single project to exceed a cost of $200,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP65–146

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 13, 1965)

On November 20, 1964, Colorado Interstate Gas Company (Applicant), filed in Docket No. CP65–146 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities necessary to establish a new delivery point to Plateau Natural Gas Company (Plateau) in Cimarron County, Oklahoma.

Applicant proposes to construct and operate gas measurement and regulating facilities necessary to deliver, during off-peak periods, natural gas to Plateau

Natural Gas Company (Plateau) for resale to operate seasonal irrigation pumps. Plateau does not propose to increase its presently effective contract demand quantity.

The estimated cost of the facilities is $7,260, and will be defrayed with current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) The proposed construction and operation of facilities and sale of natural gas, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, authorizing the construction and operation of facilities and the sale of natural gas as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) Applicant shall file within 30 days after the issuance of this order a superseding service agreement with Plateau Natural Gas Company executed in accordance with the Commission's Regulations reflecting the terms and conditions of the sale and delivery of natural gas to Plateau Natural Gas Company.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65–127

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 13, 1965)

On November 5, 1964, El Paso Natural Gas Company (Applicant), El Paso, Texas, filed in Docket No. CP65–127 a "budget-type" application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale and delivery of natural gas by means thereof by Applicant's Southern Division System, all as more fully set forth in the application.

Specifically, Applicant seeks authorization to construct and operate certain facilities for the sale and delivery of natural gas to its existing authorized Southern Division distributor customers, for resale and general distribution to residential, non-residential, and irrigation consumers situated in existing market areas, including rural, unincorporated areas within a franchise or service area of such customers, in the States of Texas, New Mexico, Arizona, and San Juan County, Utah. The application states that such sales and deliveries will not, however, be made to distributor customers for resale and general distribution in those market areas served, or proposed to be served, in whole or in part by another pipeline or in communities not then having natural gas service.

The sales and deliveries to be covered by this budget-type authorization will not exceed 100,000 Mcf annually through any given facility installed and the gas will not be used or resold for boiler fuel purposes. The proposed facilities will consist of thirty taps, together with standard appurtenances necessary for the operation thereof; twenty-five measuring and regulating stations, together with standard appurtenances necessary for the operation thereof; and three lateral or loop pipelines, together with standard appurtenances necessary for the operation thereof, including measuring and regulating facilities, not to exceed a maximum diameter of 8⅝-inch O. D. and a maximum length of 12 miles.

The total estimated cost of the proposed facilities is not to exceed $300,000, and will be financed with current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record, finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket No. G–242 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and/or sale of natural gas in interstate commerce and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct during the calendar year 1965 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities to sell natural gas to distributors for resale as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-128

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 13, 1965)

On November 5, 1964, El Paso Natural Gas Company (Applicant) El Paso, Texas, filed in Docket No. CP65-128 a "budget-type" application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale and delivery of natural gas by means thereof by Applicant's Northwest Division System, all as more fully set forth in the application.

Specifically, Applicant seeks authorization to construct and operate certain facilities for the sale and delivery of natural gas to its existing authorized Northwest Division distributor customers, for resale and general distribution to consumers situated in existing market areas, including rural, unincorporated areas within a franchise or service area of such customers, in the States of Colorado, Utah, Wyoming, Idaho, Oregon and Washington. The sales and deliveries will not, however, be made to distributor customers for resale and general distribution in those market areas served, or proposed to be served, in whole or in part by another pipeline company or in communities not then having natural gas service. Such sales and deliveries will not exceed 100,000 Mcf annually through any given facility installed. The gas will not be used or resold for boiler fuel purposes.

The proposed facilities will consist of twenty taps, together with standard appurtenances necessary for the operation thereof; twenty measuring and regulating stations, together with standard appurtenances necessary for the operation thereof; and three lateral or loop pipelines, together with standard appurtenances necessary for the operation thereof, including measuring and regulating facilities, not to exceed a maximum diameter of 8⅝-inch O.D. and a maximum length of 12 miles.

The total estimated cost of the proposed facilities is not to exceed $300,000, and will be financed with current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record, finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket No. G–242 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and/or sale of natural gas in interstate commerce and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $300,000, with the total deliveries to any one customer not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company to construct during the calendar year 1965 the proposed facilities hereinbefore described as more fully described in the application in this proceeding, and to operate such facilities to sell natural gas to distributors for resale as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $300,000, with the total deliveries to any one customer limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-138

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 13, 1965)

On November 13, 1964, Northern Natural Gas Company (Applicant) filed in Docket No. CP65-138 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of certain facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system. Additionally, Applicant will construct and operate horsepower and pipeline additions to present gathering systems.

The total cost of the facilities covered by this application will not exceed a maximum of $5,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed from cash on hand or from cash generated from operations.

On December 11, 1964, the State Corporation Commission of the State of Kansas filed a notice of intervention in the subject proceeding; however, on December 28, 1964, said notice was withdrawn.

After due notice, no petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct during the calendar year 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $5,000,000 with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP65-103

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 13, 1965)

On October 15, 1964, Transwestern Pipeline Company (Applicant) filed in Docket No. CP65-103 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition and operation of certain minor gas facilities which were installed by producers in Texas, Kansas and Oklahoma, all as more fully set forth in the application on file with the Commission and open to public inspection.

Applicant states that it has agreed to acquire these facilities through which gas is already being received by Applicant. No additional sales or purchases of gas are contemplated or proposed herein. The facilities to be acquired include small diameter gathering lines, dehydrators, metering and related facilities connecting wells of the producers to Applicant's system. The application indicates that none of the facilities involved will increase Applicant's mainline capacity.

The original cost of the facilities to be acquired was $138,740.51. Applicant will pay the original cost less depreciation. Said costs will be financed from funds available from company operations.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 8, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G-14871, *et al.* (22 FPC 391).

(2) The facilities hereinbefore described, as more fully described in the appli-

cation in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The acquisition and operation of the subject facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d)(1), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transwestern Pipeline Company, to acquire and operate the subject facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d)(1), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(C) The acquisition hereby authorized shall be completed and the facilities placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within three months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALABAMA POWER COMPANY, PROJECT NO. 2407

ORDER ISSUING LICENSE (MAJOR) AND DISMISSING PETITION TO INTERVENE

(Issued January 14, 1965)

Application was filed on September 10, 1963 by Alabama Power Company (Applicant) for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2407, known as the Yates Project, located on the Tallapoosa River, in Tallapoosa and Elmore Counties, Alabama, in the vicinity of Tallassee and Carrville.

According to the application for license, the project was developed initially between 1899 and 1902. In 1919 a portion of the original dam was washed out by a flood. Applicant purchased the project in 1923 and made repairs in 1924. Redevelopment was commenced in 1927. Commercial operation for the first generating unit commenced on May 17, 1928 and the second unit commenced operation on May 26, of the same year. There has been no substantial project construction since July 1, 1928.

The Yates Project is situated on the Tallapoosa River about 53 miles above its confluence with the Coosa River which joins with the Tallapoosa River to become the Alabama River. The United States has improved the Tallapoosa River for navigation from its mouth to a point 48 miles upstream therefrom.

The Yates dam height is about 70 feet from base to crest (normal pool elevation), and embraces a drainage area of 3,288 square miles. At normal pool elevation the area of the Yates reservoir is 2,000 acres. A five foot draw-down provides 8,900 acre-feet of usable storage. The Yates Project is capable of affecting the stage of the Tallapoosa River in the stretch improved for navigation and the stage of the Alabama River at the Montgomery gage situated 57 miles downstream from the project.

The Secretary of the Army and the Chief of Engineers have approved the plans of the project structures affecting navigation pursuant to Section 4(e) of the Act, and a condition was recommended for inclusion in any license for the project to insure that the project would not be operated in a manner that would nullify the provisions in the interest of navigation included as Article 8 in Applicant's license for Martin Project No. 349 located immediately upstream from the Yates Project.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, conditions in the interest of fish and wildlife and recreation.

The Department of Health, Education and Welfare has advised that no water supply or degradation problems have been observed as a result of the project or its operation and none is foreseen; also, it is not expected by the Department that the granting of any license for the project will create or intensify mosquito problems.

On December 13, 1963, Ben Walker, *et al.* filed a petition to intervene in this proceeding stating, among other things, that the petitioners are owners of lands along the Tallapoosa River which were flooded on February 24, 1961 by the release by Applicant of water from Applicant's Martin Dam.[1] Petitioners allege that as a result of such release, many head of cattle belonging to Petitioners were drowned and sand was deposited on their lands which greatly decreased their fertility and productivity. The petition also states that petitioners have instituted suits to recover damages from the flooding, which suits were, at the time of filing of the petition, pending in the Circuit Court of Macon and Elmore Counties, Alabama. On January 7, 1964, following the granting by the Commission of an extension of time to reply, Applicant filed a motion to dismiss the petition, stating, among other things, that the relief requested by petitioners relates solely to alleged civil causes of action then pending before Courts duly constituted under the laws of the State of Alabama and that the alleged relief sought in the petition relates solely to an alleged operation on one occasion of Applicant's Martin Project and not to the operations of the Yates Project No. 2407. Upon consideration of the above pleadings, we agree with Applicant that the petitioner has no interest in the present application and that its claim against Applicant is totally unrelated to the issues which we must consider in passing upon the license application. Accordingly, we are herein dismissing the petition to intervene.

While Applicant filed as part of its application an Exhibit R, it has not filed a recreational use plan appropriate for approval. By Article 33 herein we are requiring Applicant to cooperate with Federal, State and local agencies in the interest of recreation in connection with the use of project lands and waters by the public and to keep us advised at stated intervals with respect to the results.

---

[1] The Martin dam of licensed Project No. 349, is situated about 8 miles above Yates dam of Project No. 2407.

Exhibit K, Sheet 4 (FPC No. 2407-5) filed as part of the application for license does not show an unsurveyed island which is occupied by the project, and the Department of the Interior has been requested to make a field survey to determine the status of the land involved.

Applicant requests a 50-year license, effective from the date of its issuance. In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Alabama, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given as required by the Act. Except for the aforementioned petition to intervene, no protests have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 42,700 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Alabama Power Company (Licensee) of Birmingham, Alabama, under Section 4(e) of the Federal Power Act, for a period effective as of April 1, 1962 and terminating December 31, 1993, for the continued operation and maintenance of the Yates Project No. 2407, located on the Tallapoosa River, and affecting navigable waters of the United States, subject to the terms and conditions of the Act which is hereby incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) The Yates Project No. 2407 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by the following exhibits which formed a part of the application for license:

Exhibit	FPC No.	Showing

Sheet 5	2407-11	Cross section of spillway and plan of powerhouse.

Exhibit M, consisting of three typewritten pages entitled, "General Description of Mechanical, Electrical and Transmission Equipment."

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission: also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964), 32 FPC 1114, entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States," which terms and conditions, designated as Article 1 through 29, are attached hereto and made a part hereof, except for Article 25 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective as of April 1, 1962:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations in effect from time to time. The authorized installed capacity for such purposes is 42,700 horsepower.

Article 31. The Licensee shall, upon the determination by the Department of the Interior of an unsurveyed island, file with the Commission an amended Exhibit K, Sheet 4 (FPC No. 2407-5) to include such island in this license, and the Commission reserves the right to determine at a later date the annual charge, if any, for the use, occupancy and enjoyment of its lands.

Article 32. The Licensee shall not operate the Yates Project in such a manner that would nullify the provisions in the interest of navigation included in the Licensee's license for the Martin Project No. 349, located immediately upstream.

Article 33. Licensee shall cooperate with Federal, State and local agencies in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project. At the end of six (6) years from the date of issuance of this license and every sixth year thereafter, Licensee shall advise the Commission by letter of the results of cooperation with such agencies and of further recreation development at the project.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) The aforementioned petition to intervene in this proceeding filed by Ben Walker, *et al.* is hereby dismissed.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE WASHINGTON WATER POWER COMPANY, PROJECT NO. 204

ORDER ACCEPTING SURRENDER OF LICENSE

(Issued January 14, 1965)

Application was filed on January 21, 1963 by The Washington Water Power Company under Section 6 of the Federal Power Act for surrender of its license for the Grangeville Hydroelectric Project No. 204 located on the South Fork of Clearwater River in Idaho County, Idaho, and affecting lands of the United States within the Nez Perce National Forest.

The license was issued on January 19, 1923 for a period of 50 years. The project, as licensed, consists of an arched concrete dam, a wood stave penstock extending from the dam downstream to the stone powerhouse housing a generator and 1,700 horsepower turbine, a 13 kv transmission line extending from the station switchyard to the Town of Grangeville, Idaho, a switchyard, and appurtenant facilities.

The application recites that the 13 kv transmission line is to be retained by the licensee and used as a distribution line to serve several retail customers, and that application will be made to the Forest Service for a special use permit for the occupancy by the line of National Forest lands. Energy for the line will be obtained from another source, namely a 115 kv/69 kv stepdown transformer at Grangeville.

The application also recites that the project is a relatively small generating plant located on the South Fork of Clearwater River, a stream which is being developed by fish and game agencies for fish spawning, and that it is in the public interest to remove the project, except for the transmission line, in keeping with the fishery rehabilitation program already established by the Idaho Department of Fish and Game.

Public notice of the application has been given. No protests or petitions to intervene have been received.

By letter dated November 24, 1964, the U.S. Forest Service advised us that the National Forest lands occupied by the project have been restored to a condition satisfactory to the Service.

Annual charges under the license for the project, in the amount of $104.48 have been paid through the year 1963.

The Commission finds:

Acceptance of surrender of the license for the project is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the license for Project No. 204 is hereby accepted, effective as of November 24, 1964, subject to the payment of annual charges through said date in the amount of $93.92.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

IDAHO POWER COMPANY, DOCKET NO. E-7194

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued January 15, 1965)

Idaho Power Company (Applicant), incorporated under the laws of the State of Maine and doing business in the States of Oregon, Idaho and Nevada, with its principal business office at Boise, Idaho, filed an application on November 25, 1964, as supplemented on December 21, 1964 and January 4, 1965, for an order pursuant to Section 204 of the Federal Power Act authorizing the issuance of up to 250,000 shares of Common Stock par value $5 per share. Applicant requests that the proposed issuance and sale of Common Stock be given an exemption from the Commission's competitive bidding requirement.

The proposed shares of Common Stock will be offered publicly on or about January 26, 1965 at the last reported sale price of Applicant's Common Stock on the New York Stock Exchange immediately prior to the date of offering. Applicant proposes to enter into an underwriting agreement for the sale and the issue of Common Stock with the underwriting firm of Kidder, Peabody & Co., which agrees to underwrite the issue for a fee, subject to market conditions at the time of offering of $0.70 per share. The aforementioned fee represents the lowest cost of underwriting the contemplated issue on the basis of three proposals submitted to Applicant by underwriting firms. By letter dated November 20, 1964 (Docket No. IN-967), the Commission, pursuant to Section 34.2(k)(2)(ii) of its regulations under the Federal Power Act authorized Applicant to enter into negotiations for the underwriting or sale of the proposed issuance of Common Stock. Applicant now requests that the proposed issuance be exempted from competitive bidding requirements of Sections 34.1a(b) and (c) of its regulations upon findings as set forth in Section 34.1a(a)(4) thereof.

According to the application, the net proceeds from the new shares of Common Stock will be almost $9,500,000 and will be used for payment in full of the principal amount of outstanding notes which were authorized by the Commission in its order issued February 24, 1964, Docket No. E-7144, 31 FPC 450. Applicant expects that the principal amount of short-term bank loans outstanding will total $7,100,000 at the time of issuance and sale of new shares of Common Stock.

Applicant states that the balance of the proceeds from the sale of the proposed securities to be issued will be used by the Applicant to finance in part its 1965 construction program.

Applicant estimates that its construction program for 1965 will be at a cost of $31,333,000. The largest item listed in the construction program for 1965 is $11,072,000 for continuation of construction of the Hells Canyon Development of Project No. 1971. Other outstanding items are as follows: transmission facilities, $6,048,000; substation facilities, $5,556,000; distribution lines and substations, $5,911,000.

Written notice of the application has been given to the Idaho Public Utilities Commission, the Nevada Public Service Commission, the Oregon Public Utility Commissioner, and to the Governor of each of those States. Notice was also published in the Federal Register on December 25, 1964 (29 F.R. 18439), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest with the Federal Power Commission, Washington, D.C. 20426 on or before January 11, 1965. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued November 7, 1959, *Idaho Power Company*, Docket No. E-6781 (18 FPC 603).

(2) The proposed issuance of Common Stock as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) There is no affiliation, direct or indirect, through directors, officers or stockholders, or the ownership of securities or otherwise between Applicant and the underwriting firm of Kidder, Peabody & Co.

(4) The fees proposed to be paid to Kidder, Peabody & Co. in connection with the proposed issuance of Common Stock do not appear to be unreasonable.

(5) Under the circumstances of this case, sufficient cause has been shown for exempting the proposed issuance of Common Stock from competitive bidding requirements of Sections 34.1a(b) and (c) of the Commission's Regulations under the Federal Power Act.

(6) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of Common Stock, as described above, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(7) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Common Stock, as described above, upon the terms and conditions and for the purposes specified in the application, is hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Common Stock shall not be consummated until:

(i) Applicant shall have amended its application by filing with the Commission a verified copy of the underwriting agreement, as executed, between

Applicant and the aforementioned underwriters for the purchase or underwriting of the proposed issuance of Common Stock.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed Common Stock.

(C) This authorization shall expire unless the transactions hereby authorized are consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7197

ORDER AUTHORIZING ISSUANCE OF PREFERRED STOCK

(Issued January 15, 1965)

Pacific Power & Light Company (Applicant), a corporation organized under the laws of the State of Maine and qualified to transact business in the States of Oregon, Wyoming, Washington, California, Montana and Idaho, with its principal business office in Portland, Oregon, filed an application on December 11, 1964, as supplemented on December 16, 1964, for authorization pursuant to Section 204 of the Federal Power Act to issue 100,000 shares of Serial Preferred Stock of the par value of $100 per share.

Applicant is engaged primarily in generating, purchasing, transmitting and distributing electricity in more than 240 communities in the States of Oregon, Wyoming, Washington, California, Montana and Idaho. Applicant's electric operations have accounted for approximately 97% of its operating revenues during the 12 months ending October 31, 1964.

The New Preferred Stock is proposed to be issued under and pursuant to the applicable provisions of the Applicant's By-laws, as heretofore amended, and as to be further amended by an appropriate amendment thereto creating a new series and fixing its distinctive characteristics. The new Preferred Stock will be entitled to cumulative dividends at a rate per annum to be fixed by competitive bidding. The holders thereof will be entitled to one vote for each share held together with certain additional voting privileges during any periods when preferred stock dividends may be in arrears. The new Preferred Stock will be subject to redemption at the initial offering price thereof (exclusive of accumulated dividends) plus a premium of $5 per share if redeemed on or prior to February 1, 1970, $3 per share if redeemed thereafter and on or prior to February 1, 1975, and $1 per share if redeemed thereafter.

Applicant proposes on or about January 15, 1965, to invite sealed written bids for the purchase of the 100,000 shares of new Serial Preferred Stock. Each bid may be made by a single bidder or by a group of bidders and must be for the purchase of all the shares of the New Preferred Stock. Bids must be submitted to the Applicant at Room 2033, Two Rector Street, New York, New York before 12:00 Noon, New York time, on January 26, 1965, and accompanied by deposits of $300,000. Each bid shall specify the dividend rate to be borne by the new Preferred Stock which rate shall be a multiple of 1/25 of 1%; and the price to be paid to the Applicant, which price shall not be less than $100 nor more than $102.75 per share. Unless the Applicant shall reject all bids or exclude a bid or bids for reasons set forth in the Statement of Terms and Conditions Relating to the Bids it will accept the bid which provides for the lowest cost of money.

Applicant proposes to apply the net proceeds from the sale of the new Preferred Stock to the redemption of 100,000 outstanding shares of its 5.64% Serial Preferred Stock at 107% of $100 par value per share, plus unpaid accumulated dividends to the date of redemption. According to the application, the amount required to redeem these shares, exclusive of dividends accumulated after December 31, 1964, is $10,700,000.

Written notice of the application has been given to the Public Utility Commissioner of Oregon, the Public Service Commission of Wyoming, the Utilities and Transportation Commission of Washington, the Public Utilities Commission of California, the Public Service Commission of Montana, the Public Utilities Commission of Idaho, and to the Governors of each of those States. Notice has also been given by publication in the Federal Register on December 22, 1964 (29 F.R. 18191), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before January 8, 1965, with the Federal Power Commission, Washington, D.C., 20426. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore determined and set forth in the Commission's order issued April 24, 1958, *In the Matters of the California Oregon Power Company and Pacific Power & Light Company*, 19 FPC 573.

(2) The proposed issuance of Preferred Stock, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Preferred Stock, as hereinafter authorized will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(4) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Preferred Stock, as described above, is therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

The Commission orders:

(A) The proposed issuance of Preferred Stock, all as described above, upon the terms and conditions and for the purposes specified in the application, is hereby authorized subject to the provisions of this order.

(B) The proposed issuance and sale of Preferred Stock at competitive bidding shall not be consummated until:

> (i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the

Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereon.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of the issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLACKSTONE GAS COMPANY, DOCKET NO. CP65-23

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued January 18, 1965)

On July 21, 1964, as amended on October 5, 1964, Blackstone Gas Company (Applicant) filed in Docket No. CP65-23 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Tennessee Gas Transmission Company (Tennessee) to establish physical connection of its transmission facilities with the proposed distribution facilities of Applicant and to sell natural gas to it for resale and distribution in the Towns of Blackstone and Bellingham located contiguous to each other in Worcester and Norfolk Counties, Massachusetts, respectively.

Applicant proposes to construct and operate a distribution system of 4-inch pipe approximately 21,000 feet long in the said Towns of Blackstone and Bellingham at an estimated cost of $106,625, which will be financed by bank loans of $100,000 and the balance from company funds.

The application shows the combined estimated third year annual and peak day requirements for the two towns and their environs to be 24,242 Mcf and 222 Mcf respectively.

Applicant has received appropriate authorizations from the Massachusetts Department of Public Utilities and from the respective municipalities.

On September 14, 1964, Tennessee Gas Transmission Company filed its answer to the application stating that it had no objection to providing the requested service to Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on November 18, 1964 (29 F.R. 15460). No protest or petition to intervene or notice of intervention has been filed in this proceeding.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company"

within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) Applicant, Blackstone Gas Company, is a public utility company organized and existing under the laws of the State of Massachusetts and is engaged in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Tennessee be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver to Applicant up to a maximum daily volume of 222 Mcf of natural gas per day as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Tennessee within one year from the date of issuance of this order.

(5) The requirement that Tennessee Gas Transmission Company serve Applicant, as proposed, will not place any undue burden upon nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Tennessee Gas Transmission Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to deliver to Applicant up to a maximum daily volume of 222 Mcf of natural gas as hereinbefore described and as more fully described in the application.

(B) This order is conditioned that Applicant shall be prepared to receive natural gas from Tennessee, as proposed, within one year from the date of issuance of this order and that a service agreement shall be executed between Applicant and Tennessee in accordance with the Commission's Regulations under the Natural Gas Act.

(C) Tennessee Gas Transmission Company shall report to the Commission in writing the date of commencement of service to Applicant for service to the communities of Blackstone and Bellingham within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MRS. ANNA HUBER, DOCKET NO. RI65–370

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued January 18, 1965)

Mrs. Anna Huber (Huber) on December 28, 1964, filed a document styled a "Petition & Application for Reconsideration and Rehearing"[1] of the Commission's order issued December 9, 1964, which suspended the proposed increased rate of 26.0461¢ per Mcf, designated as Supplement No. 4 to Huber's FPC Gas Rate Schedule No. 1, for the sale of gas to Hope Natural Gas Company (Hope) from the Sardis Field, Harrison County, West Virginia. Huber's rate filing is unilateral in nature but Huber alleges the right to make the filing because of her letter dated October 30, 1964, to Hope purporting to terminate the contract which comprises her Rate Schedule No. 1. Hope on December 1, 1964, protested Huber's unilateral rate filing contending, among other things, that she had no right to terminate the contract. In the December 9 order Huber's proposed rate was suspended until May 10, 1965, and thereafter until such further time as it made effective in the manner prescribed by the Natural Gas Act. The order specifically set for hearing not only the question of the justness and reasonableness of Huber's rate but also the question of Huber's right to make the unilateral filing.

---

[1] An application for rehearing of an interlocutory order, such as involved here, may not properly be filed [Section 1.30(e) of the Commission's Rules of Practice and Procedure (18 CFR 1.30(e)]. The instant tender has been considered as a motion for reconsideration pursuant to Section 1.12 of the Commission's Rules of Practice and Procedure.

In support of her motion Huber claims, *inter alia*, that (1) her contract with Hope expired by reason of termination pursuant to the provisions thereof; (2) under *Sunray Mid-Continent* v. *F.P.C.*, 364 U.S. 137, a natural gas company has the power to make unilateral rate filing following termination of the contract; and (3) she should be given the opportunity to comply with the provisions of the Ninth Amendment to our Statement of General Policy No. 61-1, 32 FPC 422, which require that a contract must have a term of at least five years remaining in order for the provisions of the Seventh Amendment, 30 FPC 1370, to be applicable.

In the light of Hope's protest we considered it appropriate to include as an issue for hearing the right of Huber to make a unilateral filing, which, in turn, involves the right of Huber under her contract with Hope to terminate that contract. We shall not decide the unilateral filing issue until all parties to this proceeding have had the opportunity to offer evidence on whatever factual matters may be in dispute.

Huber's rate filing is not a settlement of the type permitted by the Seventh Amendment to the Policy Statement since no escalation clauses are being deleted from the contract. The Ninth Amendment merely requires a remaining contract term of five years for those contracts otherwise eligible for settlement under the Seventh Amendment.

The Commission orders:

For the reasons set forth above, Huber's motion for reconsideration filed on December 28, 1964, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE JUPITER CORPORATION, DOCKET NO. RI63-212; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-58

ORDER DENYING MOTION TO TERMINATE PROCEEDINGS

(Issued January 18, 1965)*

The Jupiter Corporation (Jupiter), on December 16, 1964, filed a motion to terminate the above-captioned proceedings. Long Island Lighting Company (Long Island), an intervener, and Staff Counsel filed Answers in opposition to Jupiter's motion on December 24 and December 28, 1964, respectively. Jupiter's motion is based on an offer of settlement which in effect is a proposal that the Commission issue the requested certificate to Tennessee Gas Transmission Company (Tennessee) in Docket No. CP65-58 and declare moot the investigation of Jupiter's rates in Docket No. RI63-212.

We consolidated these proceedings for the reason that the Commission's decision as to whether Tennessee's proposal to lease and operate Jupiter's transportation facilities in the Rollover Field, Louisiana, is in the public interest depends to a great extent upon our determination of a lawful rate in Jupiter's rate proceeding.[1]

---

*Rehearing denied February 15, 1965, 33 FPC 213.

Jupiter, in support of its motion, urges that the lease proposal is wholly in the public interest, since it provides significant operating and negotiating benefits to Tennessee, while granting substantial cost reductions to Tennessee and causing no harm to any interest involved. Jupiter states that the lease arrangement will enable Tennessee to schedule and balance its takes from the Rollover Field by direct dealings with producers, and to acquire possible further gas reserves in the area. Jupiter further states that the lease proposal will result in annual savings to Tennessee of $225,000 based on a comparison of the annual rental fee of $1,200,000 with Jupiter's charges to Tennessee in 1963 reflected by its current transportation rate. That these savings would have amounted to $380,000 annually based on 1962 volumes and that if Jupiter's existing facilities in the Rollover Field had been used to capacity during those years Tennessee's savings under the lease proposal would have ranged from $980,000 to $1,090,000 per year. Staff, on the other hand, contends that the lease rental fee would be about $970,000 in excess of Jupiter's charges to Tennessee in 1963 as reflected by the rate Staff proposes in its cost of service evidence served on the parties on December 8, 1964.

Jupiter further contends that its transportation rate cannot be based on a pure cost of service standard but should be fixed on the basis of the totality of its Gas Gathering Oil and Gas Division operations as an independent producer and that the unit cost per Mcf to Tennessee reflected by the rental fee is not out of line with charges for natural gas gathering operations in various areas. It is Staff's position that Jupiter's transportation rate can and should properly be fixed on a cost of service basis because Jupiter produces no gas in the Rollover Field and its transportation operation therein is a pipeline function and not a gathering operation under the Commission's holding in *Ben Bolt Gathering Company*, 26 FPC 825, affirmed in *Ben Bolt Gathering Company* v. *F.P.C.*, 323 F. 2d 610.

These contentions raise serious questions as to the proper basis on which Jupiter's transportation rate should be fixed. Jupiter's proposal would result in the Commission's summary disposal of these proceedings without consideration of the contentions advanced and evidence proposed by Staff.

Long Island, in its answer, contends that Jupiter's motion, though purporting to offer a plan of settlement, is in fact nothing more than a belated request that the Commission reconsider and reverse its order issued October 30, 1964, consolidating these proceedings. As such Long Island opposes it on the grounds that it presents no new material fact or argument not already considered by the Commission and seeks to avoid what it says the Commission has correctly held to be the crucial consideration in this case, that is the comparison of the lease rental charge and Jupiter's just and reasonable transportation rate. Both Long Island and the Staff cite the Commission's holding in the consolidation order that a comparison of the proposed annual rental fee with Tennessee's purchased gas costs can be properly made only after the Commission's determination of a just and reasonable transportation rate for Jupiter in Docket No. RI63-212. Long Island further states that to the extent that Jupiter's motion is intended as an offer of settlement it is unacceptable to it.

Our holding that a decision in the certificate proceedings depends upon our determination of the just and reasonable rate in Jupiter's rate investigation is founded upon our concern as to whether the proposed lease arrangement would operate in a way which would have an adverse effect on consumers. We held this to be one of our basic considerations in determining whether the issuance of a certificate to Tennessee is in the public interest. Jupiter's motion would not permit such consideration.

---

[1] Order issued October 30, 1964.

Jupiter declares that its offer of settlement is acceptable to all parties affected thereby. Its statement is incorrect because Long Island, intervener in these proceedings, stated in its answer that Jupiter's offer of settlement is unacceptable to it.

In view of the differences in the positions of the parties on the issues in these proceedings, as indicated above, and the objection of intervenor Long Island to Jupiter's offer of settlement, Jupiter's motion to terminate these proceedings on the basis of its settlement offer should be denied. These proceedings should therefore be expedited in accordance with the procedures for formal hearing previously ordered.

The Commission orders:

Jupiter's motion to terminate the proceedings in Docket Nos. RI63-212 and CP65-58 filed December 16, 1964, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SUN OIL COMPANY, DOCKET NO. CI65-427

ORDER DENYING APPLICATION FOR REHEARING

(Issued January 18, 1965)

On December 21, 1964, Sun Oil Company (Sun) in Docket No. CI65-427, filed an application for rehearing of the Commission's letter-order of November 19, 1964, 32 FPC 1341, which rejected Sun's application for a certificate of public convenience and necessity and its related gas purchase contract because the contract contains pricing provisions other than those permitted by Section 154.93 of the Commission's Rules and Regulations under the Natural Gas Act.

Sun does not maintain that its contract provisions comply with the regulations but rather contends that Section 154.93 is unlawful, unreasonable and arbitrary. Sun primarily argues that by proscribing the particular type of indefinite pricing provision contained in its contract, the Commission's regulation does not permit producers ". . . even an opportunity of 'keeping the intake and outgo of their revenues in proper balance'." Sun completely overlooks the fact that Section 154.93 permits changes in price to any specific amount provided it is at a definite date. We have determined that indefinite pricing provisions of the nature contained in Sun's contract are not in the public interest and our conclusion has been sustained by the Supreme Court. *F.P.C.* v. *Texaco Inc.*, 377 U.S. 33 (1964).

The Commission finds:

The assignments of error and grounds for rehearing set forth in Sun's application present no new facts or principles of law which were not considered by the Commission when it issued its letter-order of November 19, 1964, or which now having been considered, warrant any change or modification of said order.

The Commission orders:

The application for rehearing filed by Sun Oil Company on December 21, 1964, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-88

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 18, 1965)

On October 1, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP65-88 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities for the transportation of natural gas in interstate commerce to Stanton Prestressed Concrete Products, Division of Service Construction Company, Inc. (Stanton) located near Bryam, Hinds County, Mississippi, all as more fully set forth in the application.

Applicant proposes to construct and operate 400 feet of 2-inch pipeline to connect with its existing 2-inch lateral in Hinds County, and to construct and operate a meter and regulator station and appurtenant facilities in order to deliver and sell natural gas to Stanton. Stanton's fuel requirements are estimated to be 80 Mcf on a maximum day and 24,800 Mcf on an annual basis during the third year of operation.

Stanton will use the natural gas for boiler fuel to produce steam for utilization in the drying and curing of precast concrete products and other miscellaneous uses.

The total estimated cost of the subject facilities is $3,658, which will be financed out of Applicants' current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record finds as hereinafter stated.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The proposed construction and operation of facilities and delivery of natural gas by Applicant to Stanton as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and delivery of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas

Act, and particularly the general terms and conditions set forth in Paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should not entitle Stanton to whom firm deliveries are authorized hereinafter to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation and delivery of natural gas to Stanton as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations, within 120 days of the date on which this order issues.

(D) This certificate shall not entitle Stanton to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NO. CP65-63

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 19, 1965)

On September 3, 1964, Algonquin Gas Transmission Company (Applicant), Boston, Massachusetts, filed in Docket No. CP65-63, as supplemented on October 12, 1964, an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of other facilities, all as more fully set forth in the application, as supplemented, on file with the Commission.

Applicant seeks authorization to relocate approximately two miles of its lateral pipeline J-1 in Lexington, Massachusetts by abandoning in place approximately two miles of the existing 26-inch lateral pipeline and constructing approximately two miles of 30-inch pipeline to enable it to more economically serve its expanding markets in the future.

Applicant further states that the proposed relocation is necessary because it is within the existing Massachusetts State Route 2 Highway right-of-way on a revocable permit from the State of Massachusetts and that it has been notified by the Massachusetts Department of Public Works that a portion of this route in Lexington, Massachusetts is scheduled to be regraded, widened and improved commencing in the fall of 1964.

The total estimated cost of the relocation is $628,000. Applicant will be reimbursed approximately $15,000 by the Commonwealth of Massachusetts, and will finance the remaining costs with current funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as amended, has been filed.

At a hearing held on January 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Algonquin Gas Transmission Company, a Delaware corporation having its principal place of business in Boston, Massachusetts, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of February 26, 1951, in Docket No. G-1319 (10 FPC 35).

(2) The facilities hereinbefore described, as more fully set forth in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Algonquin Gas Transmission Company, to construct and operate the proposed facilities, as hereinbefore described, all as more fully set forth in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, be and the same are hereby granted.

(E) Applicant shall advise the Commission of the date of said abandonment within 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

DORCHESTER GAS PRODUCING COMPANY, DOCKET NOS. RI64-749, G-18671 AND RI60-11

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued January 19, 1965)

Dorchester Gas Producing Company (Dorchester) on December 18, 1964, filed a document styled an "application for rehearing"[1] of the Commission's order issued November 19, 1964, 32 FPC 1339, denying its request for an investigation to determine the justness and reasonableness of all of Dorchester's jurisdictional rates, including those involved in suspension proceedings in Docket Nos. G-18671 and RI60-11. Dorchester sought, among other things, an investigation under Section 5(a) into the justness and reasonableness of Dorchester's contract rate under its Rate Schedule No. 2 for the sale of gas to Natural Gas Pipeline Company of America (Natural). We pointed out in the November 19 order that Docket Nos. G-18671 (Rate Schedule No. 1) and RI60-11 were involved in the Hugoton-Anadarko area proceeding in Docket No. AR64-1 and that Dorchester's Rate Schedule No. 2 was also involved in the Section 5(a) aspects of that area proceeding. Dorchester's two important sales (Rate Schedule Nos. 1 and 2) are thus involved in the Hugoton-Anadarko proceedings. We also noted that any relief Dorchester might receive under Section 5(a) for its sale to Natural in an individual hearing would be only applicable prospectively until such time as the Commission renders a decision in Docket No. AR64-1.

In support of its motion Dorchester contends, *inter alia*, that (1) it cannot receive the relief it needs from its allegedly unreasonably low contract rate of 7.1463¢ per Mcf for the sale to Natural in the area rate proceeding; (2) decision in the area proceeding will be long delayed thus denying it relief; and (3) the Commission has discriminated against it by not setting this matter for separate hearing when viewed against the background of Commission's action in setting matters for hearing when dealing with increased rates which would cause wholesale triggering of other producer rates in a given area if the increased rate were permitted to go in effect subject to refund.

In arguing that it will not receive any relief in the area proceeding under Section 5(a) with respect to its sale to Natural, Dorchester assumes that we do not have the power in such a proceeding to grant any relief under Section 5(a) to which a party may be entitled. We are unwilling to make any such assumption. The very questions raised here by Dorchester as to action under the *Sierra*[3] doctrine to relieve producers of low fixed price contracts are involved in the Permian Basin area rate proceeding in Docket No. AR61-1, which is now pending before us on exceptions to the examiner's decision. Such questions will, no doubt, also be raised in the Hugoton-Anadarko proceeding. In the area proceeding Dorchester will receive full consideration of its claims to relief under Section 5(a).

---

[1] An application for rehearing with respect to Commission action on a discretionary matter, such as involved here under Section 5(a) of the Act, may not properly be filed [Section 1.30(e) of the Rules of Practice and Procedure (18 CFR 1.30(e)]. The instant tender has been considered as a motion for reconsideration pursuant to Section 1.12 of the Commission's Rules of Practice and Procedure.

Dorchester suggests that decision in the area proceeding will not be reached for many years, while a final decision in the individual hearing requested by Dorchester could be made in a matter of six months. Aside from the question of the accuracy of Dorchester's prediction, we believe that the novel and intricate question of the circumstances, if any, in which producers should be permitted to seek rates higher than those permissible under their contracts with a pipeline lend themselves at least initially to an area proceeding where we can evaluate the effect of one such action upon other sales agreements in the area.

As Dorchester points out, we have set a number of cases involving producer increased rates for individual hearing subsequent to the institution of area rate proceedings. These cases involved situations where other producer rates in the area would be triggered in the event the producer rate increases set for hearing were to go in effect subject to refund, and where such triggering might involve millions of dollars in higher purchased gas costs. In these circumstances it was incumbent upon us to take the extraordinary action of setting these matters for separate formal hearing. The situation here does not present compelling circumstances of the triggering cases.

The Commission orders:

For the reasons set forth above, Dorchester's motion for reconsideration is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NOS. G-17849, CP63-207 AND CP64-292

ORDER AMENDING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 19, 1965)

On October 28, 1964, El Paso Natural Gas Company (El Paso) filed a petition, pursuant to the Natural Gas Act and the regulations thereunder, for amendment of certificates of public convenience and necessity issued in Docket Nos. G-17849, CP63-207 and CP64-292 on June 19, 1963, 29 FPC 1175, April 15, 1963, 29 FPC 742, and July 31, 1964, 32 FPC 474, respectively, all as more particularly described in said petition which is on file with the Commission.

In Docket No. G-17849, El Paso requests that it be permitted to substitute three used 165 horsepower compressor units at the Beaver Compressor Station in lieu of the single 440 horsepower unit authorized therein; in Docket No. CP63-207, requests authorization to use a 2,400 horsepower compressor unit at its existing Blanco Compressor Station in lieu of a 2,500 horsepower unit authorized to be constructed and operated therein; and in Docket No. CP64–292, to substitute Arizona Public Service Company as its customer for sale and distribution to domestic and irrigation customers by means of the authorized Aravaipa Canyon tap in lieu of Southwest Gas Corporation originally authorized therein.

---

[3] *F.P.C. v. Sierra Pacific Power Co.*, 350 U.S. 348.

El Paso alleges that savings under estimated costs in Docket Nos. G–17849 and CP63–207 would amount to $126,930 with no appreciable diminution in design capacity.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 29, 1964 (29 F.R. 18527). No protest or petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission orders issued June 19, 1963, April 15, 1963, and July 31, 1964 in Docket Nos. G–17849, CP63–207 and CP64–292, respectively, be amended as hereinafter ordered.

The Commission orders:

(A) The certificates of convenience and necessity issued to El Paso in the Commission orders of June 19, 1963, accompanying Opinion No. 390 in Docket No. G–17849; of April 15, 1963, in Docket No. CP63–207; and of July 31, 1964, in Docket No. CP64–292 be and the same are hereby amended so as to authorize the changes El Paso requests as is more particularly described in the aforementioned petition which is on file with the Commission.

(B) In all other respects the orders in Docket Nos. G–17849, CP63–207 and CP64–292 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

FLORIDA GAS TRANSMISSION COMPANY AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP65–124

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued January 19, 1965)

On November 5, 1964, Florida Gas Transmission Company (Florida Gas), and Texas Eastern Transmission Corporation (Texas Eastern) filed in Docket No. CP65–124 a joint application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing the operation of certain facilities, all as more fully set forth in the application.

Florida Gas and Texas Eastern seek authorization (1) to operate an emergency interconnection between the pipeline systems of the two companies (facilities proposed to be so operated are presently in existence, located in Matagorda County Texas) and in the event of an emergency to exchange natural gas, and (2) to remove the interconnecting facilities in Brazoria County.

By order of the Commission issued June 21, 1963, in Docket No. CP61–302, 29 FPC 1243, authorization was granted for the operation of said facilities, and for metering and regulating facilities located in South Alvin Field, Brazoria County, Texas, for the sale and delivery of natural gas by Florida Gas to Texas

Eastern up to a maximum of 13,292,573 Mcf until June 30, 1963, when such authorization terminated.

At a hearing held on January 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 3, 1963, in Docket No. CP63-277 (30 FPC 27).

(2) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in docket No. G–1089 (8 FPC 228).

(3) The proposed exchange and delivery of natural gas between Florida Gas and Texas Eastern, the operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed exchange and delivery of natural gas, operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The facilities proposed to be abandoned by Applicants, as hereinbefore described and as more fully described in the application filed in this proceeding, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(6) The proposed abandonment of the aforesaid facilities in Brazoria County, Texas, is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(7) Florida Gas and Texas Eastern are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Florida Gas' and Texas Eastern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby jointly issued to Florida Gas and Texas Eastern in this proceeding authorizing the exchange and delivery of natural gas, the operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder is hereby conditioned upon Florida Gas' and Texas Eastern's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Permission for and approval of the abandonment by Florida Gas and Texas Eastern of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted.

(D) Florida Gas and Texas Eastern shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (C) above within ten days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE MANUFACTURERS LIGHT AND HEAT COMPANY, DOCKET NO. CP65–84; TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP65–85

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 19, 1965)

On September 30, 1964, The Manufacturers Light and Heat Company (Manufacturers) filed in Docket No. CP65–84, and Texas Eastern Transmission Corporation (Texas Eastern), filed in Docket No. CP65–85, their respective applications pursuant to Section 7 of the Natural Gas Act for certificates of public convenience and necessity authorizing the construction and operation of facilities, the sale and delivery of natural gas, and modification of Commission orders, all as more fully set forth in the applications.

Manufacturers proposes to provide an additional delivery point for the sale and delivery of a volume of natural gas to United Gas Improvement (UGI) ranging from 46,800 Mcf annually in 1965 to 74,300 Mcf annually in 1969, for resale in the Borough of Bally, Pennsylvania, and surrounding area.

Texas Eastern proposes (1) to construct and operate measuring and regulating facilities on its 30-inch Penn-Jersey pipeline at a delivery point in Berks County, Pennsylvania, and make additional deliveries to UGI for the account of Manufacturers, (2) to increase its maximum daily deliveries of natural gas to the City of Pulaski, Tennessee by 600 Mcf, (3) reduce and convert the maximum daily quantity of firm gas allocated to the City Gas Company of New Jersey (City Gas)[1] from 4,000 Mcf daily under Rate Schedule SGS–D to 1,260 Mcf daily under Rate Schedule GS–D and 840 Mcf daily under Rate Schedule WS for a total reduction of 1,900 Mcf, and (4) reduce the volume of gas authorized to be sold to Equitable Gas Company by the amount contracted for by Waynesburg Home Gas Company prior to the merger of Waynesburg with Equitable, *i.e.*, 2,150 Mcf daily under Texas Eastern's Rate Schedule GS and of 330 Mcf daily under Texas Eastern's Rate Schedule WS for a total reduction to Equitable of 2,480 Mcf daily.

The cost of the measuring and regulating facilities to be constructed by Texas Eastern is estimated to be $27,000.00. Manufacturers will reimburse Texas for the cost thereof.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits submitted in support of the authorizations, and upon consideration of the record finds and orders as hereinafter stated.

---

[1] Modification of the order of the Commission issued in Docket No. G–9784 on October 9, 1956, in connection with Opinion No. 296, authorizing an increase of Maximum Daily Quantity to City Gas Company of New Jersey under Texas Eastern's SGS–D Rate Schedule up to 4,000 Mcf daily (16 FPC 27, 51).

The Commission finds:

(1) Applicant, The Manufacturers Light and Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G–593, *et al.* (4 FPC 821).

(2) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–1089 (8 FPC 228).

(3) The proposed construction and operation of facilities, modifications of Commission orders and the sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the applications and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities, modification of Commission orders and sale and delivery of natural gas and reduction in volume of deliveries to Equitable and City Gas are required by the public convenience and necessity and certificates therefor should be issued and orders modified as hereinafter ordered and conditioned.

(5) Manufacturers and Texas Eastern are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Manufacturers and Texas Eastern's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Manufacturers and Texas Eastern in this proceeding, authorizing the sale and delivery of natural gas as hereinbefore described, and the construction and operation of facilities by Manufacturers and Texas Eastern, as more fully described in the applications and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be constructed and placed in operation within 12 months from the date on which this order issues.

(D) The Commission order issued October 9, 1956, in Docket No. G–9784 in connection with Opinion No. 296, be and the same is hereby modified so as to reduce authorized sales to City Gas in the amount of 1,900 Mcf daily, as proposed by Texas Eastern.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NOS. G–17485, G–17486;[1] TOWN OF MANILLA, IOWA, RP64–46; NORTHERN NATURAL GAS COMPANY, CP64–255 (PHASE II); MICHIGAN CONSOLIDATED GAS COMPANY, CP65–38; MICHIGAN WISCONSIN PIPE LINE COMPANY, CP65–39

ORDER DENYING MOTION FOR CONTINUANCE OF HEARING IN DOCKET NO. G–17485, ET AL., BUT GRANTING ALTERNATIVE RELIEF

(Issued January 19, 1965)

On December 10, 1964, Minneapolis Gas Company (Minnegasco) filed in the proceeding in Docket No. G–17485, *et al.*, a motion requesting that the hearing scheduled to commence therein on January 26, 1965, be continued to March 2, 1965, in order that Minnegasco's limited personnel may be able to participate in the hearing in Docket No. G–17485, *et al.*, as well as the separate hearing in Docket No. CP64–255, *et al.*, which is also scheduled to commence January 26, 1965. Minnegasco claims that the continuance requested in Docket No. G–17485, *et al.*, is necessary in order to eliminate the conflict in the hearing date of January 26, 1965, which is common to both proceedings.

Since the proceeding in Docket No. CP64–255, *et al.*, may involve many issues and parties, Minnegasco assumes that the hearing in that proceeding will not be completed before March 2, 1965, and therefore Minneapolis requests that the commencement date of the hearing in Docket No. G–17485, *et al.*, be continued approximately five weeks so that the hearing in Docket No. CP64–255, *et al.*, may be completed prior to the commencement of the hearing in Docket No. G–17485, *et al.*

On December 10, 1964, Iowa Power and Light Company filed a telegram in support of Minnegasco's motion for continuance of the hearing in Docket No. G–17485, *et al.*

On December 14, 1964, the Emmetsburg Municipal Gasworks (Gasworks) filed an answer in opposition to Minnegasco's motion for continuance stating that Gasworks will incur about $1,500 of additional expense if the continuance is granted and that the continuance would work extreme hardships on Gasworks' witnesses and attorney who have already made arrangements to be in Washington, D.C., on January 26, 1965.

On December 16, 1964, the Towns of Cascade, Manilla, and Woodbine, Iowa, jointly filed an answer in opposition to the granting of Minnegasco's motion for continuance. They aver that the position taken by Northern Natural Gas Company (Northern) as to the imposition of overrun penalties makes it important that a decision be reached on their requests to reduce contract demands as soon as possible. They state that Northern has informed them that they will be charged the overrun penalty rate for any gas used above the reduced contract demand volumes they are seeking in Docket No. G–17485, *et al.*, if such gas is taken on any day when Northern has curtailed its customers to taking only the contract demand volumes provided for in their service agreements. They state that if their requests for reduction of contract demands are granted, they will not be injured because Northern has agreed to refund the difference in revenues between their purchasing the third-year contract demand volumes now in effect and the reduced contract demands they are seeking. However, if their requests for reduction are denied, they contend that in the meantime (by curtailing interruptibles to avoid the possibility of having to pay overrun penalties) they will have lost the revenues which otherwise would have been available from making sales to interruptible customers by use of gas from that portion of their contract demands which is not needed for firm service but which they are actually buying until such time as their requests to reduce contract demands have been acted upon by the Commission.

---

[1] The listing in the caption of this order of Docket Nos. G–17485, G–17486, and RP64–46 with Docket No. CP64–255, *et al.*, is *not* to be interpreted as a consolidation of the hearing in Docket No. G–17485, *et al.*, with the entirely separate proceeding in Docket No. CP64–255, *et al.*

Minnegasco admits in its motion for continuance that it is only estimating that the hearing in Docket No. CP64–255, *et al.*, will be concluded within a period of five weeks. If the hearing in Docket No. CP64–255, *et al.*, should not be completed by March 2, 1965, the hearing in Docket No. G–17485, *et al.*, would presumably have to be delayed again in order to prevent a conflict in hearings pending the final completion of the hearing in Docket No. CP64–255, *et al.* As compared with the issues in the proceeding in Docket No. CP64–255, *et al.*, the issues in Docket No. G–17485, *et al.*, appear to be extremely limited in scope and it would seem that the hearing in Docket No. G–17485, *et al.*, should not require more than five hearing days from commencement to conclusion. Therefore, we shall deny Minnegasco's motion for continuance of the hearing in Docket No. G–17485, *et al.*, and instead, grant the alternative relief of continuing the commencement of the hearing in Docket No. CP64–255, *et al.*, to February 2, 1965, thereby allowing a period of five full hearing days in which to permit the hearing in Docket No. G–17485, *et al.*, to be concluded prior to the new date to be fixed for the commencement of the hearing in Docket No. CP64–255, *et al.*

The Examiner in Docket No. G–17485, *et al.*, may provide for longer than normal hearing days if it appears that the hearing in Docket No. G–17485, *et al.*, cannot be completed within the five-day period provided for herein. In any event, the hearing in Docket No. CP64–255, *et al.*, shall go forward on February 2, 1965, even if the hearing in Docket No. G–17485, *et al.*, has not been concluded by that time.

The Commission finds:

(1) Minnegasco's motion for continuance of the hearing in Docket No. G–17485, *et al.*, to March 2, 1965, should be denied because good cause has not been shown for delaying the commencement of the hearing in Docket No. G–17485, *et al.*, for a period of approximately five weeks.

(2) Commencement of the hearing in Docket No. CP64–255, *et al.*, should be continued to February 2, 1965, in order to eliminate the conflict in hearing dates between the hearing in Docket No. G–17485, *et al.*, and the hearing in Docket No. CP64–255, *et al.*

The Commission orders:

(A) Minneapolis Gas Company's motion for continuance filed December 10, 1964, in Docket No. G–17485, *et al.*, is hereby denied.

(B) The commencement date for the hearing in Docket No. CP64–255, *et al.*, is hereby continued to February 2, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-116

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued January 19, 1965)

On October 28, 1964, Northern Natural Gas Company (Applicant) filed in Docket No. CP65-116 an application pursuant to Subsections (b) and (c) of Section 7 of the Natural Gas Act, for permission and approval to abandon two 1,800 horsepower units no longer required at the Andrews Compressor Station located in Andrews County, Texas, and for a certificate of public convenience and necessity authorizing it to install and operate these two units in the Florey Station of the Applicant located on the Permian system.

Applicant states that because of declining volumes of gas coming into the Andrews Station the two units above mentioned are not needed there but that such units are required at the Florey Station to insure proper maintenance of service and to permit overhaul of the equipment without interruption of service during such periods.

The estimated cost of the proposed removal and reinstallation of the facilities is $685,200, which includes $314,300 for materials and equipment to be transferred from the Andrews Station, which said cost will be financed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the motion to amend has been filed.

At a hearing held on January 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the motion to amend filed on October 28, 1964, and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware Corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and the installation and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The installation and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in Paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) Public convenience and necessity at present or in the future do not require the maintenance or operation of those two compressor units hereinbefore

described. Therefore permission and approval of the proposed abandonment by Applicant should be allowed.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to install and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such regulations.

(C) The facilities hereby authorized shall be completed and placed in operation not later than January 1, 1966, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations aforesaid.

(D) Permission for and approval of the abandonment by Applicant of the pipeline facilities hereinbefore described and as more fully described in the application, in this proceeding, be and the same are granted.

(E) Applicant shall advise the Commission of the date of removal of those facilities and the date of their installment within 10 days of such removal and such installment respectively.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-121

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 19, 1965)

On November 4, 1964, Northern Natural Gas Company (Applicant) filed in Docket No. CP65-121 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain measuring, regulating and appurtenant facilities to establish a new delivery point for Peoples Natural Gas Division of Applicant's natural gas system for use in making delivery of natural gas to the Dekalb Agricultural Association to be consumed in its new plant near Dumas, Moore County, Texas, all as more fully described in the application above mentioned.

The estimated cost of the proposed facilities is $3,570, which Applicant will finance from funds on hand.

Applicant proposes to sell and deliver peak-day volumes up to 295 Mcf on a firm basis to Dekalb Agricultural Association for various uses in the Association's plant, as above stated.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 15, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate facilities and to deliver natural gas in interstate commerce as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) This certificate shall not entitle Dekalb Agricultural Association, to whom firm deliveries of gas are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increase in their requirements.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTH GEORGIA NATURAL GAS COMPANY, DOCKET NO. CP64–110

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 19, 1965)

On November 25, 1964, South Georgia Natural Gas Company (Applicant) filed an application in Docket No. CP64–110 for permission and approval to abandon by sale an additional segment of its facility referred to as its Line No. 7, located in the city limits of Dawson, Georgia, and used to deliver natural gas to the City of Dawson, all as more fully set forth in the application.

Heretofore on January 16, 1964, 31 FPC 148, the Commission issued an order in the subject docket authorizing the Applicant to abandon by sale a portion of its facility (Line No. 7) to the City of Dawson, Georgia. Said muncipality seeks to acquire the additional 1572 feet of pipeline and to have the Applicant move its meter and regulating station 1572 feet easterly along the Line No. 7 so as to be located on the boundary line outside the city limits to allow for the development of a new section of the city and to allow for paving a street over the course of the segment of said pipeline.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December 16, 1964 (29 F.R. 17858). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order of January 16, 1964, in Docket No. CP64–110 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued on January 16, 1964 in Docket No. CP64–110 be and the same is hereby amended by permitting and approving the abandonment by Applicant of an additional 1572 feet of pipeline described as Line No. 7 located in the city limits of Dawson, Georgia, and by authorizing the relocation of the meter and regulating station at a point outside the city boundaries, all as more fully set forth in the application.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA), DOCKET NO. AR64–1, ET AL.; AREA RATE PROCEEDING, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64–2, ET AL.

ORDER DENYING MOTIONS FOR RECONSIDERATION AND CLARIFYING ORDER

(Issued January 22, 1965)

On December 24, 1964, The Atlantic Refining Company and seventeen other respondents filed an "Alternative Motion for Reconsideration or Clarification," and on December 28, 1964, Hunt Oil Company and fourteen other respondents filed an "Application for Rehearing and Reconsideration," both with respect to our Order Prescribing Procedure issued November 27, 1964. The staff filed an answer on January 4, 1965. In our order of November 27, 1964, 32 FPC 1373, we directed the examiners in the above proceedings to induce the parties to incorporate evidence by reference to the records in the prior area proceedings, AR61–1, AR61–2, and to hold joint prehearing conferences and joint hearing sessions, and we prescribed May 15, 1965, as the date for submitting all evidence proposed other than cost evidence derived from the questionnaires circulated to the producers and rate design evidence. Oklahoma Independent Petroleum Association (OIPA), *et al.*, on January 15, 1965, filed a motion for clarification or reconsideration of the order of November 27, 1964. OIPA points out that cost data collected by private parties utilizing FPC Form No. 20 pursuant to our order herein of November 4, 1964, has not been specifically excluded from the May 15, 1965, data for submission of evidence. We shall so provide.

The arguments of the producers with respect to continuing with these proceedings have already been answered in our November 27, 1964, order, and need not be considered further.

The producers suggest many difficulties in incorporation by reference of evidentiary material. These objections are premature, for we have provided opportunity to explore the feasibility of incorporation by reference before the examiners, who have called a joint prehearing conference on January 26, 1965, to consider this matter among others. We are aware that incorporation presents difficulties but they must be considered in light of the time and expense involved in retrying issues on which a full record has already been made. We expect all parties to cooperate in efforts to overcome the difficulties so that an expensive and time-consuming retrial of many issues can be avoided. Accordingly, we have directed the examiners to use every effort to work with the parties in attempting to resolve the problem of incorporation in the public interest and to report to us if progress is not made where incorporation would be feasible and non-prejudicial if the parties would cooperate.

Atlantic, *et al.*, points out that there is considerable evidence related to the cost phase of the case which is not directly derived from the cost questionnaires yet should be submitted with the cost phase. The motion mentions rate of return evidence by way of illustration. While it is true that return on investment is a component in cost studies, it is separately derived in almost all instances and such evidentiary presentations should not be delayed pending the unrelated development of the remaining cost components. Moreover, our experience alerts us to the fact that this evidence typically requires long periods of cross-examination which, of course, should be commenced at the earliest possible date. In this connection, we note that some nonassociated gas cost studies presented in prior proceedings (and possibly again in these) do not depend primarily upon questionnaire data. These data have been in the Commission's public reference room since they were filed and accordingly have been continuously available to the parties to these proceedings as well as the public generally. We are of the view, therefore, that only cost exhibits which are primarily dependent upon data derived from the all areas questionnaire or data derived from the utilization by private parties of FPC Form No. 20 should be deferred beyond May 15, 1965. As we stated in our November 27, 1964, order, other presentations should be made on May 15, 1965.

Arguments addressed by Hunt and OIPA to our not issuing a report form to small producers are not appropriate here. On November 4, 1964, 32 FPC 1266, we issued our order declining to issue such a report form and denied reconsideration by our order issued December 29, 1964, 32 FPC 1536. OIPA's further request that we make provision now for exhibits aimed at the "justification * * * of the rate of individual producers" is denied for the reasons outlined heretofore in our "Order Denying Motions For Reconsideration," issued January 30, 1964, *Area Rate Proceeding*, *et al.*, Docket No. AR64-1, *et al.*, 31 FPC 197.

The Commission finds:

The assignments of error and grounds for reconsideration set forth in the motions of Atlantic, *et al.*, Hunt, *et al.*, and OIPA, *et al.*, filed in this proceeding present no facts or legal principles which would warrant any change or modification in the Commission's order of November 27, 1964, except as hereinbefore indicated.

The Commission orders:

The motions for reconsideration filed by Atlantic, *et al.*, Hunt, *et al.*, and OIPA, *et al.*, are hereby denied, but the order of November 27, 1964, is hereby clarified as noted above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

AREA RATE PROCEEDINGS, ET AL. (HUGOTON-ANADARKO AREA), DOCKET NO. AR64-1, ET AL.; AREA RATE PROCEEDINGS, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64-2, ET AL.

ORDER GRANTING REQUESTS FOR COPIES OF FPC FORM 20 FOR USE AS TRIAL AID

(Issued January 25, 1965)

By letter filed January 6, 1965, the Hunt Oil Company and fourteen associated respondents to these proceedings (Hunt) requested the Commission to provide them with approximately 5,000 copies of FPC Form 20 entitled "Cost and Statistics of Oil and Gas Production and Exploration for the Year 1962." Upon receipt of these copies, Hunt states that it proposed to "transmit four (4) copies of the questionnaire, together with two (2) copies of the instructions to each of the respondents who were not required to file an 'All Area Questionnaire' and request and urge that such questionnaire be properly completed and promptly returned to us [*i.e.*, the Hunt Oil Company] in triplicate." In the alternative, Hunt requests that its letter be treated as a motion for reconsideration of two recent orders issued herein, *infra*.

The Commission received a joint letter dated January 14, 1965 from Phillips Petroleum Company and thirty other respondents to these proceedings supporting Hunt's request and stating that they also had planned to make a request of the Commission identical to that of Hunt, but that a duplicate request would not now appear to be necessary. Phillips states, however, that it desires "reasonable access to all responses to the questionnaires to be circulated by Hunt Oil Company, *et al.*" and offers to cooperate with Hunt in circulating and compiling the data as well as sharing the attendant expenses.

On January 18, 1965, Oklahoma Independent Petroleum Association (OIPA) requested 500 copies of Form 20 for circulation to a group of producers.

By order issued herein on November 4, 1964, 32 FPC 1266 (reconsideration denied, December 29, 1964, 32 FPC 1536), we declined to prescribe the small producer report form (FPC Form 20) but issued it for informational purposes and provided that copies of the form would be made available in reasonable numbers upon request in order to facilitate the private gathering and presentation of representative and material small producer group data in the proceedings.

In view of the fact that the Hunt request contemplates the collection of such data from all small producer respondents for presentation in these proceedings, the necessary copies should be made available for that purpose. The OIPA request for circulation to a more limited number of producers should also be granted. Hunt and OIPA shall state in their letters of transmittal of the form that the information is being requested by them and not by the Federal Power Commission.

The Commission orders:

The Secretary is directed to furnish (1) to Hunt and OIPA the necessary copies of FPC Form 20 requested and (2) as to Hunt a list of the names and addresses of the respondents to these two proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

BACA GAS GATHERING SYSTEM, INC., DOCKET NO. CP65-57

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 25, 1965)

On August 28, 1964, as supplemented on September 30, 1964, and October 21, 1964, Baca Gas Gathering System, Inc. (Applicant), filed in Docket No. CP65-57 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of natural gas in interstate commerce, all as more fully set forth in the application, as supplemented, which is on file with the Commission.

Applicant proposes to construct and operate approximately 38 miles of natural gas pipeline to transport gas which will be purchased by Applicant from producers in Baca County, Colorado, and sold to Panhandle Eastern Pipe Line Company (Panhandle) in Morton County, Kansas. The subject facilities will provide a market for heretofore uncommitted gas supplies from an area in which there are no existing interstate natural gas pipelines.

Applicant estimates that 43,602 Mcf of gas at 14.73 psia are dedicated to the project. The gas will be purchased by Applicant from the producers at an initial rate of 12 cents per Mcf at 14.65 psia and sold to Panhandle at an initial rate of 16 cents per Mcf at 14.65 psia.

The estimated cost of the proposed facilities is $530,000, including approximately $50,000 of organization expenses, which will be financed by the issuance of common stock, convertible debentures, and notes. In a letter to the Commission dated December 9, 1964, Applicant agreed to accept a certificate with the following conditions:

1. No dividends shall be paid on the common stock for as long as the convertible debentures are outstanding unless the total long-term debt, inclusive of debentures, is less than 75 percent of the total capitalization.
2. The common equity shall be maintained at not less than 15 percent of the total capitalization.
3. Applicant's rate for sales to Panhandle shall not at any time exceed the sum of four cents plus any rate lawfully in effect for the sale of gas to Applicant by the producers.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been received.

At a hearing held on January 22, 1965, the Commission received and made a part of the record in this proceeding all evidence, including the application as supplemented and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Baca Gas Gathering System, Inc., a Texas corporation having its principal place of business in Dallas, Texas, will be a "natural-gas company" within the meaning of the Natural Gas Act upon completion of construction and commencement of the transportation of natural gas hereinafter authorized.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction of facilities and transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction of facilities and the transportation and sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the certificate issued hereinafter should be conditioned by imposing the dividend, equity and rate restrictions hereinbefore described.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Baca Gas Gathering System, Inc., to construct facilities and transport and sell natural gas in interstate commerce as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) The certificate issued by paragraph (A) above is conditioned as follows:

1. No dividends shall be paid on the common stock for as long as the convertible debentures are outstanding unless the total long-term debt, inclusive of debentures, is less than 75 percent of the total capitalization.

2. The common equity shall be maintained at not less than 15 percent of the total capitalization.

3. Applicant's rate for sales to Panhandle shall not at any time exceed the sum of four cents plus any rate lawfully in effect for the sale of gas to Applicant by the producers.

(E) Applicant shall file pursuant to Part 154 of the Regulations under the Natural Gas Act not less than thirty nor more than sixty days prior to the commencement of the sale of natural gas an appropriate rate schedule which rate schedule shall include *inter alia* "3" in paragraph (D) above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP65-24

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 25, 1965)

On July 22, 1964, The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP65-24 an application, as amended on October 13, 1964, pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in order to provide a total of seven additional delivery points to three existing customers, The Dayton Power and Light Company (Dayton), West Ohio Gas Company (West Ohio) and Columbia Gas of Ohio, Inc. (Columbia of Ohio), all as more fully set forth in the application, as amended.

Specifically, Applicant proposes to construct and operate the following facilities for (1) Dayton: a tap on Line A-97, regulator and measuring station for delivery of gas for resale and distribution in the unincorporated community of Frederick and environs, Miami County, Ohio; (2) West Ohio: a tap on Line D-322, regulator and measuring station for delivery of gas for resale and distribution in the unincorporated community of Westminster and environs, Allen County, Ohio, and (3) Columbia of Ohio: (a) a tap and measuring station on Line D for delivery of gas for resale and distribution in the incorporated community of Fulton and environs, Morrow County, Ohio, (b) a tap on Line D-35 for delivery of gas for resale and distribution in the unincorporated community of Adrian and environs, Seneca County, Ohio, (c) a tap on Line V-100 for delivery of gas for resale to Snow Bowl, Inc., for use by the latter in its ski lodge and resort presently under construction in Harrison County, Ohio, and (d) a tap on Line Z-8 for delivery of gas for resale to International Harvester Company at the latter's new factory in Clark County, Ohio; International Harvester will use natural gas for washing, drying, paint drying, space heating and air conditioning at its new truck manufacturing plant, and (e) a tap on Line FE-345 and measuring station for delivery of gas for resale in the unincorporated community of Reedsville and environs, Meigs County, Ohio.

The estimated third year peak day and annual natural gas requirements for the proposed services are:

Customer	Market	Peak day (Mcf)	Annual (Mcf)
Dayton	Frederick	84	8,530
West Ohio	Westminster	205	28,063
Columbia of Ohio	Fulton	133	15,600
	Adrian	45	5,300
	Snow Bowl, Inc.	89	13,000
	International Harvester	2,700	407,000
	Reedsville	138	17,760
Total		3,394	495,253

Applicant's customers have requested the proposed additional delivery points in order to serve their potential customers in communities and environs contiguous to their respective service areas not presently supplied with natural gas.

The total estimated cost of the proposed facilities is $20,671, which cost will be financed from cash on hand.

Applicant states that the present contractual commitments with the subject customers are considered adequate to provide for the initial service; therefore, no increase in contract demands is contemplated.

By letters dated September 25 and November 19, 1964, Applicant was issued temporary certificates authorizing the construction and operation of facilities necessary to provide five of the proposed delivery points.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as amended, has been filed.

At a hearing held on January 22, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, amendment and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G–371 (4 FPC 1033).

(2) The facilities hereinbefore described, as more fully described in the application, as amended, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Ohio Fuel Gas Company, to construct and operate the proposed facilities in order to sell and deliver natural gas as hereinbefore described, all as more fully described in the application, as amended, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized which have not been authorized by temporary certificates shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within three (3) months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

MARTHA FEATHERSTONE, ET AL., DOCKET NO. CI64-591, ET AL.; GRAHAM B. MORRISON AND GLEN W. PRYOR, TRUSTEES, DOCKET NO. G-18884

ORDER DENYING MOTION FOR RECONSIDERATION OF ORDER DENYING MOTION FOR SEVERANCE AND REJECTING OFFER OF SETTLEMENT

(Issued January 26, 1965)

On June 29, 1959, Mountain States Drilling Company (Mountain States) filed in Docket No. G-18884 an application for a certificate of public convenience and necessity pursuant to Section 7 of the Natural Gas Act, for authority to sell and deliver natural gas to Pacific Northwest Pipeline Corporation (now El Paso Natural Gas Company) and to construct facilities necessary therefor, from acreage located in Sublette County, Wyoming, at a proposed initial price of 18.5¢ per Mcf at 15.025 psia.

Temporary authorization to commence this sale was granted to Mountain States by letter dated August 12, 1959, containing a condition, among others, that Mountain States should refund any amount in excess of the amount resulting from the rate finally determined to be proper in Docket No. G-18884.

Two assignments of the property were executed by Mountain States to Graham B. Morrison and Glen W. Pryor, Trustees for Richard Stoll Shannon III, *et al.* (Applicants) and the transfer became effective on January 1, 1964.

Accordingly, on February 19, 1964, applicants amended the application by filing a motion to be substituted for the predecessor, Mountain States.

Temporary authority to continue the sale was granted to applicants by letter dated April 24, 1964, containing a condition, among others, that applicants should refund any amount in excess of the amount resulting from the rate finally determined to be proper in Docket No. G-18884. By letter dated April 24, 1964, the Commission advised Mountain States of its responsibility for any refunds for sales prior to the date of transfer of the property.

By order issued July 29, 1964, the above-docketed proceedings were consolidated and a hearing thereon was held on October 5, 1964, terminating on October 8, 1964.

In the interim, on September 29, 1964, Applicants filed a motion for severance of Docket No. G-18884 from Docket No. CI64-25, *et al.*, and an offer of settlement. The Applicants agreed therein to accept a certificate of public convenience and necessity containing a condition that the initial rate should not exceed 15.384¢ per Mcf for the period subsequent to December 1, 1962. The motion was denied by order issued November 18, 1964, 32 FPC 1335.

As set forth in the order, Applicants' determination of the period for which refunds should be made was predicated on a refund period found proper in the disposition of a proceeding involving Section 4(e) of the Act (Socony Mobil Oil Company, Inc., Docket No. G-16710), whereas we are here concerned with an application for a certificate of public convenience and necessity filed pursuant to Section 7(c) of the Act, and a refund-conditioned temporary authorization.

On December 15, 1964, Applicants filed a motion for reconsideration of the order denying motion for severance and rejecting offer of settlement. Applicants contend that, by expressed contractual commitment, the rate they are entitled to charge El Paso was to be the rate approved by the Commission, in Docket No. G-16710. Based on this contractual commitment, trustees say that the rate in the instant docket (G-18884) should be the settlement rate approved for Socony in Docket No. G-16710. We deny such motion for the following reasons.

Contrary to the above contractual agreement of the parties, the temporary certificate issued to Applicant, like that issued to its predecessor Mountain States, contained a specific condition requiring Applicants to refund "to the purchaser any amounts collected for the proposed sale, plus interest at 7 percent per annum * * *, in excess of the amount resulting from the rate found to be required by the public convenience and necessity in Docket No. G–18884." The temporary certificate so-conditioned was accepted by Applicants and operations commenced thereunder. The condition in the temporary certificate is clear, the amount of the refund was to depend upon the "public convenience and necessity" rate determined to be proper in Docket No. G–18884, and not upon the rate finally allowed in Socony Mobil Oil Company, Inc. proceeding, Docket No. G–16710. It is well established that the Commission is obligated to approve rates no higher than those found to be required by the public convenience and necessity, notwithstanding the private contractual agreements of the parties. Furthermore, the acreage from which the natural gas is being sold by Applicants was not subject to the G–16710 proceeding.

The Commission finds:

The public interest would not be served by acceptance of the offer of settlement as proposed.

The Commission orders:

The motion for reconsideration of order denying motion for severance and rejecting offer of settlement is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

IDAHO POWER COMPANY, DOCKET NO. E–7194

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued January 26, 1965)

By order issued January 15, 1965, *supra*, p. 76, in the above-entitled matter, the Commission authorized Idaho Power Company (Applicant) to issue and sell 250,000 shares of Common Stock, par value $5 per share, subject, among others, to the provisions set forth in Paragraph (B) of that order as follows:

(B) The proposed issuance and sale of Common Stock shall not be consummated until:

(i) Applicant shall have amended its application by filing with the Commission a verified copy of the underwriting agreement, as executed, between Applicant and the aforementioned underwriters for the purchase or underwriting of the proposed issuance of Common Stock.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed Common Stock.

Applicant, on January 25, 1965, filed an amendment, pursuant to the requirements of the aforementioned order, in which it stated that the price to Applicant for the Common Stock will be $39.175 per share, and the initial public offering price will be $39.875 per share.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of Paragraph (B) of the Commission's order issued January 15, 1965 in the above-entitled

docket, and the price to be received by Applicant for the Common Stock is reasonable.

(2) The proposed issuance and sale of Common Stock, as hereinafter authorized will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the Common Stock as referred to above, is approved as reasonable.

(B) The proposed issuance and sale of Common Stock referred to above upon the terms and conditions, and for the purposes specified in the application as supplemented by the amendment referred to above, are authorized, subject only to the provisions of Paragraph (A), (C), (D), and (E) of the Commission's order issued January 15, 1965 in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7197

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF PREFERRED STOCK

(Issued January 26, 1965)

By order issued January 15, 1965, *supra*, p. 78, in the above-entitled matter, the Commission authorized Pacific Power & Light Company (Applicant), to issue and sell at competitive bidding 100,000 shares of Serial Preferred Stock, par value $100 per share, subject to the provisions, among others set forth in Paragraph (B) of that order as follows:

(B) The proposed issuance and sale of Preferred Stock at competitive bidding shall not be consummated until:

> (i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.
>
> (ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereon.

Applicant, on January 26, 1965, filed an amendment, pursuant to the requirements of the aforementioned Commission order, in which it states, among other things, that it proposes to accept, as representing the lowest cost of money, the bid of Kidder, Peabody & Co., Incorporated, Eastman Dillon, Union Securities & Co. to purchase the Preferred Stock, par value $100 per share at a price of 100.24 per share and an annual dividend of 4.56%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements contained in Paragraph (B) of the Commission's order issued January 15, 1965, in the above-

entitled docket; and under the respective bids it proposes to accept for the issuance of Preferred Stock, the price per share to be received by Applicant for the Preferred Stock and its dividend rate are reasonable.

(2) The proposed issuance and sale of Preferred Stock, as hereinafter authorized, will be for a lawful object, within the corporate purpose of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price per share to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereof, are approved as reasonable.

(B) The proposed issuance and sale of Preferred Stock, referred to above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized, subject only to the provisions of Paragraphs (C), (D), and (E) of the Commission's order issued January 15, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and David S. Black.

THE CINCINNATI GAS & ELECTRIC COMPANY, DOCKET NO. E-7125; THE UNION LIGHT, HEAT AND POWER COMPANY, DOCKET NO. E-7203

ORDER ACCEPTING RATE SCHEDULE FILINGS, TERMINATING RATE INVESTIGATION AND SCHEDULING HEARING ON JURISDICTIONAL ISSUES

(Issued January 27, 1965)

This order accepts a settlement proposal of The Cincinnati Gas & Electric Company (CG&E), whereby the Company would reduce its wholesale electric rates and charges to its corporate affiliate The Union Light, Heat and Power Company (Union) by approximately $670,000 annually commencing December 1, 1964, and would reduce its wholesale electric rates and charges to five municipally owned electric distribution systems operating in the State of Ohio (Bethel, Blanchester, Georgetown, Hamersville and Ripley) and another corporate affiliate, West Harrison Gas & Electric Company in the event those wholesale sales are determined to be within the regulatory jurisdiction of this Commission, Sections 205 and 206 of the Federal Power Act, such reductions to be in an estimated aggregate amount of $80,560 annually, and retroactive to December 1, 1964.

By order issued September 4, 1963, 30 FPC 641, the Commission directed an investigation and hearing as to the lawfulness of CG&E's wholesale electric rates and charges and the issue of whether that Company by its failure to establish and maintain rate schedules for service to certain of its wholesale customers is in violation of the provisions of Sections 205 and 206 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder.

The settlement proposal of CG&E and accompanying schedules of rates were submitted for filing January 18, 1965. That Company's rates and charges to Union would become effective December 1, 1964. Likewise CG&E's rates and charges to other wholesale customers would become effective December 1, 1964, but only in the event they are determined to be jurisdictional.[1]

CG&E requests that the jurisdictional questions arising from our September 4, 1963 order of investigation and hearing, be set for hearing commencing May 4, 1965, following service and exchange of prepared testimony with Commission staff. Also, that Company and Union propose that the jurisdictional status of CG&E's wholesale electric service to Bethel, Ohio and West Harrison Gas & Electric Company and of Union's wholesale electric service to Williamstown, Kentucky [2] be set for hearing and resolved as a part of a consolidated proceeding. The Commission's order of investigation and hearing, Docket No. E-7125, issued September 4, 1963, was predicated on information then on file with the Commission which did not reflect the fact that CG&E had at that time, contracted for service to Bethel, Ohio. CG&E's service to West Harrison Gas & Electric Company has been pursuant to a filed rate schedule of the Company, but CG&E now challenges this Commission's jurisdiction thereover.

Commission staff join in the foregoing proposals. No other parties appear of record in Docket No. E-7125.

We believe that the rate issues raised in Docket No. E-7125 should be disposed of through the acceptance of the proposed rate schedules, subject to the conditions hereafter stated. The proffered schedules with their consequent rate reductions result from our Order to Show Cause, and reflect staff and Company investigations as to cost of service. The settlement proposal was formulated following numerous conferences between the staff and representatives of CG&E and Union. In disposing of these questions, we take note of the rate relief to be afforded. Moreover, this order will expedite the determination of the jurisdictional questions associated with CG&E and Union.

Our acceptance of the proffered rate schedules in determination of the rate questions in this proceeding is not to be taken as indicative of our views as to the allowability of any of the items in CG&E's cost of service, nor should it be taken as indicative of what rate of return we might allow CG&E were these rate issues to be fully tried and decided on the merits as to all contested issues.

The Commission finds:

(1) Good cause has been shown that the prior notice period provided in Section 205(d) of the Federal Power Act be waived with respect to CG&E's Rate Schedule FPC No. 2, Supp. No. 5 (Union), and it be allowed to take effect as of December 1, 1964.

(2) It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 201, 205, 206, 308 and 309 thereof, to terminate further investigation and hearing on issues other than those of Commission jurisdiction pursuant to Sections 205 and 206 of the Act, all as raised by order of the Commission issued September 4, 1963, Docket No. E-7125.

(3) It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 201, 205, 206, 308 and 309, that CG&E be directed to show cause why the Commission should not find and determine that its sale at wholesale for resale to West Harrison Gas & Electric Company, and to the afore-mentioned Ohio municipalities, are sales at wholesale in interstate commerce, subject to the jurisdiction of this Commission under the provisions of

---

[1] Under the settlement proposal, the difference between charges under CG&E's existing and proffered rates, together with simple interest at the rate of 6⅛% per annum, is subject to refund to the appropriate municipal customers and West Harrison Gas & Electric Company.

[2] In 1952, Union filed with this Commission its contract for the wholesale sale of electric energy to the City of Williamstown, designated in the files of the Commission as Union's Rate Schedule FPC No. 6.

the Federal Power Act, for which CG&E must file appropriate rate schedules in the manner provided under Part 35 of the Commission's Regulations under that Act.

(4) It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 201, 205, 206, 308 and 309 that Union be directed to show cause why the Commission should not find and determine that its sale at wholesale for resale to the City of Williamstown, Kentucky is a sale at wholesale in interstate commerce, subject to the jurisdiction of this Commission under the provisions of the Federal Power Act for which Union must file an appropriate rate schedule in the manner provided in Part 35 of the Commission's Regulations under that Act.

(5) It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205 and 206 thereof, that the following rate schedules be accepted for filing to become effective December 1, 1964, in the event of a determination of the regulatory jurisdiction of this Commission thereover pursuant to Sections 205 and 206 of the Act, in the manner hereinafter provided:

Rate schedule designation:	*Other party*
FPC No. 22	Village of Bethel, Ohio.
FPC No. 23	Village of Blanchester, Ohio.
FPC No. 24	Village of Georgetown, Ohio.
FPC No. 25	Village of Hamersville, Ohio.
FPC No. 26	Village of Ripley, Ohio.
Supplement No. 2 to FPC No. 15	West Harrison Gas & Electric Co.

(6) It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 201, 205, 206, 308 and 309 thereof, that the jurisdictional issues to be determined as referred to in findings (2), (3) and (4) above be consolidated for hearing purposes as hereinafter provided.

The Commission orders:

(A) The prior notice period provided in Section 205(d) of the Federal Power Act is hereby waived with respect to the proffered rate schedule referred to in finding (1) above, and it is hereby allowed to take effect as of December 1, 1964.

(B) The issuance of this order shall constitute full notice of the filing and publication of the rate schedule referred to in Paragraph (A) insofar as its effective date is concerned.

(C) The proffered rate schedules for service to Bethel, Blanchester, Georgetown, Hamersville, and Ripley, Ohio and West Harrison Gas & Electric Company, referred to in finding (5) above, are accepted for filing to become effective December 1, 1964, subject to a determination of jurisdiction of this Commission thereover and exhaustion of judicial review of any such Commission determination, or the time within which to seek that review. CG&E shall refund to those customers any charges collected in excess of amounts payable under the foregoing rate schedules if applied on and after December 1, 1964, together with simple interest of 6⅛% per annum.

(D) Acceptance of CG&E's rate schedules as herein provided is without prejudice to any findings or orders which have been or hereafter may be made by this Commission in any proceeding by or against the aforementioned companies. Moreover, nothing in this order shall be construed as a waiver in any other respect of the requirements of Section 205(d) of the Federal Power Act or Part 35 of the Commission's Regulations under the Act, provided however that with respect to the rate schedules referred to in Paragraph (C) above, CG&E need not file any additional supporting cost of service information as otherwise might be required by Section 35.12 or 35.13 of those Regulations in the event that such schedules are used for billing purposes under conditions as contemplated herein, but CG&E shall file all rules, regulations, classifications, and practices together with all contracts which affect or relate to those services.

(E) A public hearing shall be held at the time and place specified hereafter (Docket No. E-7125), at which CG&E shall show cause why the Commission should not:

(1) Find and determine that CG&E's sales at wholesale for resale to Bethel, Blanchester, Georgetown, Hamersville and Ripley, Ohio, to the West Harrison Gas & Electric Company, City of Hamilton, Ohio, Dayton Power and Light Company, and Inter County REA, are sales of electric energy at wholesale for resale in interstate commerce, subject to the provisions of Section 201, 205 and 206 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder.

(2) Find and determine that CG&E has been violating or proposes to violate Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder;

(3) Order CG&E to file and maintain rate schedules with this Commission for service to the purchasers named above in accordance with the provisions of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder; and

(4) Issue such other orders and take such other actions as may be necessary or appropriate to bring about compliance with the Federal Power Act and the Commission's Regulations thereunder.

(F) A public hearing shall be held at the time and place specified hereinafter, (Docket No. E-7203), at which Union shall show cause why the Commission should not:

(1) Find and determine that Union's sale at wholesale for resale to Williamstown, Kentucky is a sale at wholesale for resale in interstate commerce, subject to the provisions of Section 201, 205 and 206 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder;

(2) Find and determine that Union has been violating or proposes to violate Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder;

(3) Order Union to file and maintain a rate schedule with this Commission for service to Williamstown, Kentucky in accordance with the provisions of Section 205 of the Act and Part 35 of the Commission's Regulations thereunder; and

(4) Issue such other orders and take such other actions as may be necessary or appropriate to bring about compliance with the Federal Power Act and the Commission's Regulations thereunder.

(G) A public hearing shall be held commencing May 4, 1965, 10:00 A.M. (EST) in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C., respecting the matters raised by this order, Paragraphs (E) and (F) above, and for hearing purposes Docket Nos. E-7125 and E-7203 are hereby consolidated.

(H) The following procedure is prescribed for that public hearing:

(1) Commission staff shall file its prepared direct case not later than February 15, 1965, ten copies to be served on CG&E and Union;

(2) CG&E and Union shall file their prepared case in chief and answering case not later than April 15, 1965, ten copies to be served on Commission staff;

(3) All of the testimony, except exhibits, shall be in question and answer form.

(4) Each witness shall execute an affidavit adopting the testimony for which he assumes responsibility and an original and two conformed copies of such affidavit shall be filed with his prepared testimony.

(5) The Presiding Examiner shall specify the order of cross-examination for the information of the parties in making their respective witnesses available for cross-examination. At the conclusion of cross-examination, the Presiding Examiner shall set the date for filing of Staff's prepared rebuttal case, if Staff desires to present rebuttal evidence.

(I) The Commission's Rules of Practice and Procedure shall apply in this proceeding except to the extent that they are modified or supplemented herein.

(J) Notices of intervention or petitions to intervene in this proceeding as presently constituted may be filed with the Federal Power Commission, Washington, D.C., 20426 on or before February 15, 1965, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

(K) The proceeding in Docket No. E-7125 is hereby terminated except for those issues specified in Paragraph (E) above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. G-16401; HOME GAS COMPANY, G-16402; KENTUCKY GAS TRANSMISSION CORPORATION, G-16403; THE MANUFACTURERS LIGHT AND HEAT COMPANY, G-16404

ORDER REOPENING PROCEEDINGS, PROVIDING FOR FURTHER HEARING AND DENYING PETITION FOR DECLARATORY ORDER

(Issued January 28, 1965)*

On June 26, 1964, the United States Court of Appeals for the District of Columbia Circuit, in *Lynchburg Gas Company* v. *F.P.C.*, 336 F. 2d 942, by *per curiam* order set aside and remanded for further proceedings the Commission's Opinion No. 368 and order in Docket No. G-16401, *et al.*, issued November 27, 1962, 28 FPC 860. The Commission, in that opinion, modified and approved a partial requirements rate schedule, designated CDS-PR, proposed by four affiliates of the Columbia Gas System: Atlantic Seaboard Corporation (Seaboard), Home Gas Company (Home), The Manufacturers Light and Heat Company (Manufacturers), and Kentucky Gas Transmission Corporation (Kentucky). The proposed CDS-PR rate schedules, applicable to those customers securing a part of their requirements from other sources, provided for the same monthly demand and commodity charges as contained in the respective company's CDS rate schedule, and in addition provided for minimum monthly and annual commodity charges. The Commission modified the rate schedule proposed by the four companies to provide that the minimum monthly and annual commodity charge would be based on 80% of the number of days' use of the purchaser's contract demand in the base month and base period, as defined in the schedule. The

---

*Rehearing and Reconsideration denied March 25, 1965, 33 FPC 619.

Commission further provided for redetermination of the days' use in the base month and base period in the event of a 10% increase or decrease in the purchaser's sales of gas for industrial purposes.

The court, in remanding the case to the Commission for further proceedings, holds that the Commission's opinion lacked the subsidiary findings sufficient to support the Commission's conclusion as to the necessity of the PR rate schedule and as to the propriety of the redetermination provision inserted by the Commission. The several opinions indicate a number of areas of inquiry and point to matters that the various members of the court believe the Commission must consider in order to determine that the PR rate is consistent with the welfare of ultimate consumers.

Upon review of the record of these proceedings, it appears that the evidence may be insufficient to support findings in all the areas of inquiry referred to in the court's separate opinions. Accordingly, we believe that it is necessary and appropriate that these proceedings be reopened and that we provide for further hearing herein in order that all parties and the Commission staff will have the opportunity to present evidence directed to the issues raised by the court's order.

Lynchburg Gas Company (Lynchburg), a purchaser from Seaboard of part of its natural gas requirements, on August 31, 1964, filed a Petition for Declaratory Order on Remand in which it requests the Commission to issue an order declaring that the only valid and effective rate schedule under which Seaboard may bill its customers for contract demand volumes is its CDS (Contract Demand Service) Rate Schedule. The aforementioned Columbia Companies filed an answer to Lynchburg's petition on September 21, 1964.

In support of its petition, Lynchburg argues (1) that the Commission in its order found the PR schedules as originally filed by the Columbia Companies were not just and reasonable; (2) that the Commission in the same order found the PR schedules as modified by the Commission were just and reasonable; (3) that the judgment of the court "reiterating the language of the opinion, specifically provided: 'The order of the Federal Power Commission on review in this case is *set aside*' (emphasis added)"; (4) that the same words of the judgment, as quoted by Lynchburg, simultaneously invalidated the Commission's holding that the revised PR was just and reasonable and confirmed the holding that original PR was not just and reasonable.

This argument is clearly without merit. The court in its opinion does not declare the PR rate to be null and void or suggest that it was remanding the case to the Commission for the mere ministerial act of dismissing and terminating the proceedings. On the contrary, the court set aside the Commission's order because it believed that the Commission's findings were inadequate to support its conclusions and remanded the case to the Commission "for further proceedings not inconsistent with the opinion of this Court", *i.e.*, to inquire into the various issues specified in the court's opinion. This action does have the effect of voiding at least temporarily the modified CDS–PR rate prescribed by the Commission, since that rate has no legal status save in the Commission's order, which has been set aside. It does not, however, void the basic CDS–PR schedule as originally instituted by the Columbia System Companies since this rate has been made effective, subject to refund, pursuant to the statutory procedure prescribed by Section 4 of the Natural Gas Act and remains the filed rate until superseded by lawful final order.

Accordingly, it is our conclusion that pending the further proceedings consistent with the court's opinion and our decision therein, the PR rate schedules of the aforementioned companies which became effective pursuant to our order issued October 1, 1958, subject to refund, continue in effect subject to the same conditions contained in that order, provided, however, that monthly demand and commodity charges therein during the period involved shall continue to be no higher than those effective under the individual company's applicable CDS rate schedules during the same period. We may note, in passing, that this result cannot harm Lynchburg since even assuming that the minimum bill provisions actually apply to it prior to final action in this proceeding, any excess payment required thereby would be subject to refund, with interest.

The Commission orders:

(A) The proceedings in the above-captioned dockets hereby are reopened and further hearing shall be held to permit all the parties to adduce and present such evidence as they deem necessary and appropriate to meet the issues set forth in the above-referenced court's opinion.

(B) Atlantic Seaboard Corporation, Home Gas Company, Kentucky Gas Transmission Corporation and The Manufacturers Light and Heat Company, respondents, shall serve their prepared testimony and exhibits constituting their direct case upon all parties on or before February 23, 1965.

(C) The Commission staff and all interveners proposing to present evidence shall serve their prepared testimony and exhibits upon all parties as follows: Staff, on or before March 17, 1965. Interveners, on or before March 26, 1965.

(D) Presiding Examiner Howell Purdue, or any other officer or officers of the Commission designated by the Chief Examiner for that purpose (see Delegation of Authority, 27 F.R. 4276, etc.), shall fix the date of hearing by notice thereof; shall preside at the prehearing conference herein provided; at any other conferences he may find it appropriate to convene, and at the hearing in this matter, pursuant to the Commission's Rules of Practice and Procedure and as further provided by this order.

(E) Pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner shall commence at 10:00 a.m. (EST) on April 6, 1965, in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C., 20426, for the purpose of reaching such agreements as will expedite the determination to be made herein, including, but not limited to, stipulation of facts, and establishment of dates for the service of rebuttal testimony and for the cross-examination of all testimony, and of considering such other matters as may be properly dealt with to aid in expediting the orderly conduct and disposition of these proceedings.

(F) Lynchburg's Petition for Declaratory Order on Remand, filed August 31, 1964, is denied and the CDS–PR Rate Schedules of Seaboard, Home, Kentucky and Manufacturers filed on August 20, 1958, are reinstated as legally effective rate schedules subject to the conditions of the Commission's order in these proceedings issued October 1, 1958, and provided, further, that during the period involved the monthly demand and commodity charges in those PR rate schedules shall not be higher than the monthly demand and commodity charges effective under the individual company's applicable CDS rate schedules during the same period.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COMMUNITY NATURAL GAS COMPANY, INC., DOCKET NO. CP65-62

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued January 28, 1965)

On September 3, 1964, Community Natural Gas Company, Inc. (Applicant), filed in Docket No. CP65-62 an application, as supplemented on October 16 and December 2, 1964, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing the American Louisiana Pipe Line Company (American Louisiana) to establish physical connection of its transmission facilities with the proposed facilities of Applicant and to sell and deliver natural gas to Applicant for resale and distribution in the Town of Dale, Indiana and its environs including the unincorporated town of Mariah Hill.

The facilities proposed to be constructed by Applicant consist of the distribution lines and 2.6 miles of 3-inch lateral transmission pipeline at an estimated cost of $145,000 which cost will be financed by the issuance and sale of bonds and a bank loan.

Applicant shows that it has obtained from the Public Service Commission of Indiana a certificate authorizing it to render natural gas service in Spencer County and to borrow the sum of $87,000 from a bank.

The daily volume of gas to applicant is estimated at 426 Mcf for distribution and resale.

On September 17, 1964, American Louisiana filed its answer to the application stating that it had no objection to the rendition of the gas service requirements of Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December, 22, 1964 (29 F.R. 18189). No protest or petition to intervene or notice of intervention has been filed in this proceeding.

The Commission finds:

(1) Applicant, American Louisiana Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order accompanying Opinion No. 276 in Docket No. G-2306, *et al.*, issued October 1, 1954 (13 FPC 380).

(2) Applicant is a public utility company organized and existing under the laws of the State of Indiana and is engaged in the business of distributing and selling natural gas within said state.

(3) It is necessary and desirable in the public interest that American Louisiana Pipe Line Company be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver to Applicant its gas requirements of up to a maximum daily volume of 426 Mcf of Natural gas as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from American Louisiana Pipe Line Company within one year from the date of issuance of this order.

(5) The requirement that American Louisiana Pipe Line Company serve Applicant, as proposed, will not place any undue burden upon nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) American Louisiana Pipe Line Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to deliver to Applicant its gas requirements up to a maximum daily volume of 426 Mcf of natural gas as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from American Louisiana Pipe Line Company within one year from the date of issuance of this order.

(C) American Louisiana Pipe Line Company shall report to the Commission in writing the date of commencement of service to Applicant for service to the Town of Dale, Indiana and environs within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MISSISSIPPI RIVER TRANSMISSION CORPORATION,* DOCKET NO. CP64–265

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 28, 1965)

On April 30, 1964, Mississippi River Transmission Corporation (Applicant) filed in Docket No. CP64–265 an application, as supplemented on November 2, 1964, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation and delivery, on an interruptible basis, of natural gas, all as more fully set forth in the application on file with the Commission and open to public inspection.

Specifically, Applicant proposes to install a tap connection on its existing 12¾-inch O.D. pipeline in Jefferson County, Missouri, and to construct and operate 1.31 miles of 6⅝-inch O.D. line from said connection to a proposed portland cement manufacturing plant being constructed near Festus, Jefferson County, Missouri, by River Cement Company, a Division of Stewart Concrete and Material Company. The latter company is a wholly-owned subsidiary of Mississippi River Fuel Corporation. Applicant will utilize the proposed facilities to transport and deliver natural gas for use in firing a rotary cement-burning kiln, driers and other equipment incidental to the operation of said plant.

The estimated third year annual and maximum day deliveries are 1,840,000 Mcf and 10,000 Mcf, respectively.

---

*The original application was filed by Mississippi River Fuel Corporation. However, in Docket No. CP63–12, by Commission order issued August 7, 1964, 32 FPC 551, Mississippi River Transmission Corporation was authorized to acquire, among other things, the pipeline facilities of Mississippi River Fuel Corporation. Accordingly, Mississippi River Transmission Corporation will be substituted as Applicant in the instant docket.

Pursuant to a contract dated October 26, 1964, gas will be sold at a rate of 48 cents per Mcf for all gas used in other than rotary kilns and raw material drying equipment; gas used in rotary kilns and raw material drying equipment will be sold at a rate of 35 cents per Mcf during the period from November 15 through March 15 and 21½ cents per Mcf during the period from March 16 through November 14 of each year.

The estimated cost of the proposed construction is $58,900, which cost will be financed with cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on January 27, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mississppi River Transmission Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1960, in Docket No. CP60–95 (24 FPC 1020).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should be granted on the express condition that the interruptible service authorized hereinafter shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Mississippi River Transmission Corporation for firm service to its customers.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Mississippi River Transmission Corporation, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) The certificate issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Mississippi River Transmission Corporation for firm service to its customers.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC GAS TRANSMISSION COMPANY, DOCKET NO. CP62-59

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 28, 1965)

On November 19, 1964, Pacific Gas Transmission Company (Applicant), 245 Market Street, San Francisco, California, 94106, filed in Docket No. CP62-59 an application to amend the certificate granted therein by extending authorization for an additional three years to provide for the construction, maintenance and operation of taps and metering facilities to enable it to deliver gas transported for the account of El Paso Natural Gas Company (El Paso) to certain of the latter's distribution customers in its Northwest Division, pursuant to authorizations to be obtained by El Paso from time to time, all as more fully set forth in the application to amend.

On April 6, 1962, 27 FPC 671, in Docket No. CP62-59 the Commission issued Applicant the certificate of public convenience and necessity which it seeks to amend.

The application to amend states that under its tariff El Paso will pay for the construction costs, not to exceed $15,000 at any delivery point.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 29, 1964 (29 F.R. 18533). No protest or petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission order issued April 6, 1962, in Docket No. CP62-59 be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Pacific Gas Transmission Company in the Commission order of April 6, 1962, in Docket No. CP62-59 be and the same is hereby amended so as to authorize the changes it requests as is more particularly described in the aforementioned application which is on file with the Commission.

(B) In all other respects the order in Docket No. CP62–59 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP65–148; CITIES SERVICE GAS COMPANY, DOCKET NO. CP65–150

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 28, 1965)

On November 23, 1964, Transwestern Pipeline Company (Transwestern) filed in Docket No. CP65–148 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale of natural gas, all as more fully set forth in the application.

Transwestern proposes to construct and operate a 6-inch tap valve and appurtenant facilities, to be located at the point where its existing 10-inch Laverne lateral crosses the 26-inch Oklahoma-Hugoton line of Cities Service Gas Company (Cities Service), and to sell such volumes of natural gas to Cities Service as Transwestern may have available, up to 50,000 Mcf per day, pursuant to an agreement between the parties dated November 6, 1964.[1] The proposed sales are to extend for a period ending six months after the date of first deliveries under said agreement or the date Transwestern is ready to commence deliveries pursuant to authorization pending in Docket No. CP64–104, whichever is earlier.

On November 23, 1964, Cities Service Gas Company (Cities Service) filed in Docket No. CP65–150 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities, all as more fully set forth in the application.

Cities Service proposes to construct and operate metering and regulating facilities at a point in Harper County, Oklahoma, where Transwestern's 10-inch Laverne lateral crosses Cities' 26-inch Oklahoma-Hugoton pipeline for the purpose of obtaining an additional supply of gas for the coming winter to supplement Cities' present supplies.

Transwestern agrees to sell and deliver to Cities Service, pursuant to the agreement dated November 6, 1964, such quantities of natural gas as Cities Service may require and as Transwestern may have available for delivery up to 50,000 Mcf per day for a period ending six months after the date of first deliveries under the agreement or the date Transwestern is ready to commence deliveries of gas pursuant to authorization issued in Docket No. CP64–104, whichever date is earlier.

The estimated cost of the proposed facilities of Cities Service is $10,000 and of Transwestern is $1,860, which it is proposed to be financed with treasury cash.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

---

[1] Temporary authorization issued by the Commission on December 23, 1964.

At a hearing held on January 27, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued October 10, 1963 in Docket No. CP63-290 (30 FPC 997).

(2) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(3) The proposed construction and operation of facilities and sale of natural gas by Transwestern and construction and operation of facilities and transportation of natural gas by Cities Service, as hereinbefore described and as more fully described in the applications and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities, transportation and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Transwestern and Cities Service are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Transwestern and Cities Service's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (c)(3, (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Transwestern and Cities Service authorizing the construction and operation of facilities and the sale of natural gas by Transwestern and the construction and operation of facilities and transportation of natural gas by Cities Service as more fully described in the applications in these proceedings,[2] subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

---

[2] For a period ending six months after the date of first deliveries under agreement of November 6, 1964, or the date Transwestern is ready to commence deliveries pursuant to authorization pending in Docket No. CP64-104, whichever is earlier.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRUNKLINE GAS COMPANY, DOCKET NO. CP65-174

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 28, 1965)

On December 14, 1964, Trunkline Gas Company (Applicant) filed in Docket No. CP65-174 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of miscellaneous field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new and present supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $2,500,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 27, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G-882 (8 FPC 250).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Trunkline Gas Company, to construct during the calendar year 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED FUEL GAS COMPANY, DOCKET NO. G-20270; ATLANTIC SEABOARD CORPORATION, DOCKET NO. G-20272

ORDER DENYING APPLICATION FOR REHEARING

(Issued January 28, 1965)*

On December 31, 1964, Lynchburg Gas Company (Lynchburg) filed an application for rehearing and reconsideration of the Commission's order issued herein December 24, 1964, 32 FPC 1529, to the extent that such order denied Lynchburg's request to reject certain rate schedules. That order accepted for filing revised tariff sheets tendered by Atlantic Seaboard Corporation (Seaboard) on November 20, 1964, and also accepted Seaboard's plans of refunds and rate reductions filed in compliance with Opinion Nos. 430, 31 FPC 1342, and 430-A, 32 FPC 1106.

Among the revised tariff sheets filed by Seaboard on November 20, 1964, were eight sheets containing provisions for service under Seaboard's Partial Requirements (PR) Rate Schedules, with rate levels as reduced pursuant to Opinion Nos. 430 and 430-A. The prior effective tariff sheets comprising the PR rate schedules had been filed by Seaboard in compliance with Opinion No. 368 in Docket No. G-16401, *et al.*, 28 FPC 860, to supersede those which became effective subject to refund pursuant to our order issued October 1, 1958, in those proceedings.

---

*Reconsideration denied March 25, 1965, 33 FPC 619.

On November 27, 1964, Lynchburg, which buys a part of its natural gas requirements from Seaboard, filed a protest in these proceedings contending that the court in the *Lynchburg* case[1] had invalidated the PR rate schedules when it set aside and remanded for further proceedings the Commission's Opinion No. 368 and therefore Seaboard's inclusion of PR rate schedules in its filing of November 20, 1964, was unlawful. Lynchburg requested the Commission to reject the tendered PR rate schedules. In the order issued December 24, 1964, the Commission denied this request, stating that, without prejudgment of the issues on remand in the proceedings in Docket No. G–16401, *et al.*, it was appropriate for Seaboard to file a reduction in the rate levels contained in the PR rate schedules corresponding to the reduction in the other contract demand rate schedules as required by order in Docket No. G–20270, *et al.*, subject to further proceedings in Docket No. G–16401, *et al.*

Pursuant to the court's remand in the *Lynchburg* case, we have issued an order reopening the proceedings in Docket No. G–16401, *et al.*, to give all parties an opportunity to present evidence pertinent to the issues set forth in the court's opinion. That order also denies Lynchburg's petition for a declaratory order in those dockets and reinstates, as legally effective rate schedules pending the reopened proceedings and our decision therein, the PR rate schedules originally proposed by Seaboard (and three other Columbia System affiliates) subject to the conditions of our order issued October 1, 1958, which made those rate schedules effective, subject to refund.

We believe our findings and conclusions in that order are fully dispositive of the contentions made by Lynchburg in its application for rehearing in these proceedings. Based upon those findings and conclusions, which are here incorporated, we find that Lynchburg's application for rehearing filed December 31, 1964, should be denied.

The Commission orders:

The application for rehearing and reconsideration filed by Lynchburg on December 31, 1964, hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65–111

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 28, 1965)

On October 26, 1964, as supplemented on November 13, 1964, United Gas Pipe Line Company (Applicant), filed in Docket No. CP65–111 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the transportation thereof, all as more fully set forth in the application.

Applicant seeks authorization to construct and operate approximately .8 mile of 6-inch pipe line, .7 mile of 4-inch pipe line, and a sales meter and appurtenant facilities, located in Harrison County, Mississippi, for the purpose of enabling Applicant to deliver natural gas on a firm basis to Reichhold Chemicals, Inc. for use in its chemical plant near Gulfport, Harrison County, Mississippi.

---

[1] *Lynchburg Gas Company* v. *Federal Power Commission*, 336 F. 2d 942 (issued June 26, 1964).

Estimated annual and peak day requirements for the initial three-year period are stated to be:

Mcf:	*First year*	*Second year*	*Third year*
Annual	201,600	302,400	403,200
Peak day	700	1,400	1,400

The estimated cost of Applicant's construction is $56,456, which will be financed with current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 27, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application as supplemented, and exhibits submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The proposed construction and operation of facilities and transportation of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation of natural gas as more fully described in the application as supplemented, and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within 6 months of the date on which this order issues.

(D) The certificate issued hereby shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-255 (PHASE I)

ORDER DENYING PETITION FOR REHEARING AND AMENDMENT OF COMMISSION'S FINDINGS AND ORDER

(Issued January 29, 1965)

On January 4, 1965, Iron Ranges Natural Gas Company (Petitioner) filed in Docket No. CP64-255 (Phase I) a petition for rehearing and amendment of the Commission's findings and order issued December 21, 1964, 32 FPC 1491, in said docket.

The order of December 21, 1964, issued a certificate of public convenience and necessity to Northern Natural Gas Company (Northern) authorizing the construction and operation of certain pipeline facilities in order to provide initial natural gas service to the Mesabi Iron Range Area of Minnesota. Findings paragraph (8) and ordering paragraph (F) of said order reserved an excess mainline capacity of 2,233 Mcf per day for service to the Hanna Mining Company (Hanna) ". . . provided Hanna advises Applicant on or before January 1, 1965, that it will construct a plant and enter into a contract to purchase natural gas from Applicant."

Petitioner requests that the order of December 21, 1964, be amended by adding the words "or from a supplier purchasing natural gas from Applicant for this purpose" at the end of the above quoted phrase. Petitioner alleges that Hanna proposes to construct two plants. Further, it is alleged that one of such plants will be constructed within the limits of a certain village and the other beyond the limits of another certain village and that Petitioner has a public utility franchise to distribute natural gas within both villages. Petitioner states that by amending the order of December 21, 1964, as proposed, petitioner will not be precluded from making the sale to Hanna.

Northern's application in Phase I of this docket contains a letter of intent, dated March 17, 1964, wherein Hanna agrees to purchase up to 3,300 Mcf of natural gas per day from Northern for use in a plant proposed to be constructed, provided, however, among other things, that Hanna does in fact build such a plant and that Hanna determines that natural gas is the most feasible and economical fuel.

On January 4, 1965, Northern filed a letter, dated December 28, 1964, from Hanna wherein Hanna states that it will construct a plant and use natural gas and will proceed to enter into a contract for the purchase of such gas from Northern. Accordingly, it appears that the conditions of finding (8) and ordering paragraph (F) of the order of December 21, 1964, have been met.

In its application Northern clearly manifests its intent to serve Hanna directly. The market projected for Iron Ranges does not include any sales to Hanna. The notice of application issued on October 30, 1964, made clear that Northern was proposing direct service to Hanna. On June 1, 1964, Petitioner filed a petition to intervene in this docket. Said petition supported Northern's application and did not object to the proposed direct sale to Hanna. Petitioner makes no showing now which it could not have made earlier. Under these circumstances we see no reason to reopen the proceeding to consider the merits of petitioner's argument.

Accordingly, the petition for rehearing and amendment should be denied.

The Commission orders:

Iron Ranges Natural Gas Company's petition for rehearing and amendment of the Commission's findings and order issued December 21, 1964, in Docket No. CP64-255 (Phase I), is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-164

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued January 29, 1965)

On December 8, 1964, Northern Natural Gas Company (Applicant), 2223 Dodge Street, Omaha, Nebraska, filed in Docket No. CP65-164 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain facilities in Dakota County, Minnesota, all as more fully set forth in the application on file with the Commission.

Applicant proposes to abandon measuring and regulating facilities and appurtenances originally installed to enable Minneapolis Gas Company (Minneapolis) to serve the Orest and Crystall View Heights Housing Additions (Orest) in Dakota County, Minnesota.

The application states that due to current highway construction Minneapolis extended its distribution system in order to avoid interruption of service to Orest, and is presently serving the area through another existing measuring station, located approximately one mile south of the Orest Station. Since Minneapolis is no longer utilizing the Orest Station, Applicant requests permission and approval to abandon and remove this station.

The application further states that Minneapolis contributed the entire cost of constructing the Orest Station, and that Applicant will, therefore, refund to Minneapolis the original cost of the Station less depreciation and the cost of removal. The adjusted refund to Minneapolis is stated to be $1,804.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on January 27, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities authorized in paragraph (A) above within ten days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SUNRAY DX OIL COMPANY, DOCKET NO. G-6822, ET AL.[1]

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued January 29, 1965)

There is before us for consideration a Motion for Approval of Settlement Proposal and Termination of Proceedings filed on December 29, 1964, by Sunray DX Oil Company (Sunray) encompassing the rates for 155 of Sunray's currently effective FPC Gas Rate Schedules. Comments have been filed by some of the parties to these proceedings, all of which have been given due consideration. In summary, the settlement proposal as filed by Sunray provides:

(1) Settlement rates, including tax reimbursement, equal to or less than the Commission's applicable area ceilings with three exceptions hereinafter discussed;

(2) Sunray waives the right to make effective contractually authorized increased rates until June 1, 1972, for Rate Schedules Nos. 159, 186, 215 and 216 and to file for contractually authorized increase rates until January 1, 1968, for the remainder of the rate schedules. Sunray reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels established by an order or rule of the Commission, or to file for any contractually authorized increase in tax reimbursement;

(3) Sunray would delete any favored-nation, price redetermination and periodic escalation clauses contained in Rate Schedule Nos. 1, 3, 5, 20, 37, 53, 60, 72, 74, 151, 190, 194 and 208, and additionally would delete the favored-nation and price redetermination clauses in Rate Schedule Nos. 45 and 175.

---

[1] The additional dockets involved herein are set forth in Appendices A, B, and C attached hereto.

(4) Refunds with interest, at the applicable rates, to December 31, 1964, under rate schedules where collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance, commencing with December 31, 1962, to the date upon which the settlement rates become effective.

(5) Exclusion from the settlement proposal of sales in the Permian Basin; fifteen sales related to previous offers of settlement accepted by the Commission; seven sales to other producers who make jurisdictional sales for resale; one sale consolidated in certificate proceedings that are presently under court review; two sales in an area where the Commission has fixed no area rate ceiling, and those matters relating to Rate Schedule Nos. 109, 161 and 189, insofar as the dockets thereunder pertain to the New Mexico Emergency School Tax reimbursement portions of the rates.[2]

In support of its proposal, Sunray states that the settlement rates, refunds, moratorium periods and other provisions thereof, not specifically noted herein, are in the public interest in that they are reasonable, and will provide price stability for a long period of time for natural gas moving in interstate commerce.

With respect to refunds, the parties to the settlement conferences utilized cost of service studies and company revenues to determine Sunray's revenue-cost relationship. These studies indicate that it is appropriate that we require that refunds should be computed for sales made on and after December 31, 1962. Applicable interest shall be paid on all of the refunds through December 31, 1964. Such refunds will be approximately $2,000,000, exclusive of interest. Sunray's future revenues will be decreased approximately $1,400,000 annually as a result of the settlement.

Sunray's total refund obligation under the settlement shall be computed as hereinbefore described. For the purpose of distributing the total refunds amount, Sunray shall compute: (1) The excess revenue collected (subject to refund) above the settlement rate under each rate schedule to January 1, 1965: (2) The total of all excess revenues collected under (1) above. The total refund amount shall be refunded to each purchaser (where collections have been made subject to refund) in the proportion that each rate schedule's excess revenue computed under (1) above bears to the total excess revenue computed under (2) above. When the refund obligation is determined, such refund shall be first applied to Sunray's sales in the most recent month and then to each preceding month until the full refund amount under that rate schedule is made.

The purchasers of gas under the various rate schedules to which this settlement proposal relates are all natural gas pipeline companies subject to our jurisdiction under the Natural Gas Act, and many of such purchasers in turn have customers who are natural gas pipelines. Some of these pipeline customers of Sunray or Sunray's customers are required under express provisions of outstanding orders of this Commission to flow-through to their jurisdictional customers all or any part of the refunds they may receive from Sunray as a result of this settlement; others may choose so to do in the absence of such express provisions. For all of the reasons set forth in our order in Humble Oil & Refining Company Docket Nos. G-9287 and G-9288, *et al.* 32 FPC 49 (order issued July 8, 1964) we shall require Sunray to retain the amounts of refund ordered herein until further order directing the nature of their disposition, and also to submit within 45 days of this order to the Commission and each jurisdictional customer a detailed report setting out, by purchasers, the amount of refund related to each rate schedule, the volume of gas sold thereunder and the period covered. We shall also by separate action direct each of the pipeline purchasers within ten days from the receipt of such report, to submit a report of their own setting forth whether they intend to pass on all or part of such refund amounts to their jurisdictional customers and the names of such customers and amounts of refund each would receive, or, if they claim the right to retain any portion of the refunds, a brief statement as to the legal or equitable basis for such claim. In the event such reports indicate that the refunds will flow-through to ultimate consumers or distribution companies not subject to the Commission's jurisdiction, the Commission will authorize the release of such refund sums by Sunray (unless a state regulatory authority after notification of the sum to be made available to a company subject to its regulatory jurisdiction asks us to defer releasing the funds until it can determine their ultimate disposition). In the event a pipeline purchaser from Sunray (or a pipeline customer of such a pipeline) indicates that it is asserting a claim to retain substantial refund sums the Commission will by further order prescribe the procedure for determining the relative rights to such funds of such pipeline or its customers.

---

[2] Sunray proposes that 4(e) proceedings involving Rate Schedule Nos. 109, 161 and 189 (Docket Nos. RI63-482, RI63-488, RI64-381 and RI64-390) be settled as to all questions except the proper reimbursement of the New Mexico Emergency School Tax, which became effective April 1, 1963.

Settlement rates which are exceptions to the applicable area ceiling are proposed by Sunray for a sale to United Gas Pipe Line Company (United) in the Gibson and East Gibson Fields, Terrebonne Parish, under Sunray's FPC Gas Rate Schedule No. 186, and two sales to Transcontinental Gas Pipe Line Corporation (Transco), one being a sale in the South Duson Field, Lafayette Parish, under Sunray's FPC Gas Rate Schedule No. 215, and the other a sale in the Church Point Field, Acadia Parish, under Sunray's FPC Gas Rate Schedule No. 216. Each of the sales are made in South Louisiana. The circumstances surrounding the sale to United are substantially the same as those we considered in *Sinclair Oil & Gas Company*, Docket Nos. G–9291, G–9292, *et al.*, 30 FPC 5, where we there approved the same settlement rate for a sale to United in the same field as Sunray herein proposes. Therefore, we shall approve Sunray's proposal to reduce the currently effective rate of 23.3¢ per Mcf to 18.5¢ per Mcf for this sale.

As to the sales to Transco, Sunray proposes to reduce the currently effective rates of 23.55¢ per Mcf to 18.0¢ per Mcf. The permanently certificated initial rate for each of these sales is 17.5¢ per Mcf. As justification for approval of settlement rates above the applicable increased rate ceiling, or the last firm rate, Sunray cites the fact that it agreed to elimination of the indefinite pricing provisions from its contracts with Transco when such contracts were renegotiated in 1961. Sunray states that such elimination prevented favored-nation increases in rates paid by Transco for its purchases of natural gas in the area from other producers. Additionally, Sunray states that the renegotiated contracts were for terms of twenty years which were to run until 1974 and 1975, and that by renegotiation it agreed to new twenty-year contracts to expire in 1981, thus, in effect, extending the old contracts for a period of approximately seven years in addition to eliminating the indefinite pricing provisions. However, in no past producer rate settlements which we have approved, have exceptions to the applicable area ceilings been made solely on the grounds of past elimination of indefinite pricing provisions. In fact, a similar proposal was made in *Shell Oil Company, et al.*, Docket No. G–9446, *et al.*, 28 FPC 257, for a sale by Shell in South Louisiana under its FPC Gas Rate Schedule No. 153, and we there conditioned our approval of Shell's settlement proposal to require that the settlement rate should conform to the area ceiling. Indeed, it should be noted that in *Shell* it proposed to eliminate the indefinite pricing provisions as a part of its proposal, and only if we approved the proposed settlement rate. We stated in *Shell* that although we recognized the desirability of a firm rate over an extended period of time, we did not find it sufficiently persuasive to warrant a breach of the applicable ceiling (*ibid.*, p. 259). Here, we do not have the elimination of the indefinite pricing provisions proposed as a part of the settlement, but have merely the fact that they were removed in the past as a part of contract renegotiations as justification for departure from our established policy.

For the reasons set forth in our order in *Shell*, and also because we are asked here to approve a settlement rate which is 0.5¢ per Mcf above the initial rate, which is itself above the prescribed increased rate ceiling, we do not find that the reasons given for a departure from past policy warrant our so doing. Additionally, there is no instance where such an exception has been approved because of the extension of the term of a renegotiated contract with or without elimination of such pricing provisions.

We shall therefore condition our approval of Sunray's settlement proposal to require it to charge a settlement rate of 17.5¢ per Mcf, the initial rate, for its sales of natural gas to Transco under its FPC Gas Rate Schedule Nos. 215 and 216, subject to the filing moratorium on rate increases until January 1, 1968.

The settlement proposal includes rates for which issuance of related permanent certificates is pending, some of which are for sales presently being made under temporary certificates. We shall set such applications for abridged hearing in accordance with Section 7 of the Natural Gas Act, providing that the settlement rate, in each instance, shall be the initial rate.

Our approval of Sunray's proposal results in Sunray refunding approximately 56% of the amounts it has collected subject to refund above the settlement rates and the reduced rates of approximately $1,400,000 annually will constitute disallowance of approximately 46% of the increased rates currently being collected in Section 4(e) proceedings. In addition, approximately $69,000 annual reduction will result from our approval of a settlement rate for one sale where the settlement rate is below the "last firm rate", and no Section 4(e) proceeding is pending therefor.[3]

We believe that the principles underlying the present settlement proposal, as conditioned herein, are consistent with those utilized in previous major independent producer rate settlements.

Our action herein should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in future proceedings, including area rate or similar proceedings, involving Sunray's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein as more fully set forth in the settlement proposal filed by Sunray on December 29, 1964, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act, that it be approved and made effective as hereinafter ordered, and good cause exists for approving the settlement rates, for severing and terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The settlement of these proceedings on the basis of the settlement proposal, filed by Sunray on December 29, 1964, and as conditioned herein, is approved.

(B) The applicable settlement rates set out in Appendix A hereto, and those involving Section 4(e) proceedings set forth in Appendix B hereto, are approved, subject to the conditions herein, and such rates shall be effective as of January 1, 1965. Sunray shall substitute in lieu of its proposed settlement rate of 18¢ per Mcf a rate of 17.5¢ per Mcf under its FPC Gas Rate Schedule Nos. 215 and 216, which shall be subject to the filing moratorium on rate increases until January 1, 1968.

---

[3] Sunray's Rate Schedule No. 159 which involves a sale to United in the Ridge Field, Lafayette Parish, South Louisiana.

(C) The approved settlement rates shall be applicable, during the moratoria periods herein provided for, to all sales of natural gas from all acreage dedicated as of the date of issuance of this order under each of the rate schedules currently on file with the Commission whether such sales are made by Sunray, its successors or assignees.

(D) Sunray shall compute the difference between the rates collected subject to refund and the related settlement rates for the period from December 31, 1962 to the date of this order, together with interest as specified by order of the Commission in each docket to December 31, 1964. Sunray shall within 45 days from the date of this order submit a report to the Commission, and serve a copy on each of the purchases involved, setting out by purchasers the amount of refunds related to each rate schedule (showing separately the principal and applicable interest), the bases used for such determination, the periods covered, the proposed distribution of such amounts and letters from the purchasers agreeing to the correctness of such amounts.

(E) Sunray shall retain the amounts shown in the report required under paragraph (D) above, subject to further order of the Commission directing the disposition of those amounts.

(F) If Sunray elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 6% per annum on all funds thus available from March 19, 1965 to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission.

(G) If Sunray elects to deposit the retained refunds in a special escrow account, Sunray shall tender for filing on or before March 19, 1965, an executed Escrow Agreement, conditioned as set out below, accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Sunray and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Sunray, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in Paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the trust company for the quarterly period.

(H) The pending certificate proceedings set out in Appendix B hereto shall not be terminated on the basis of the approval of the settlement proposal, but shall be determined after hearing in accordance with Section 7 of the Natural Gas Act.

(I) Sunray shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order, including specifically the rate as conditioned herein, and the subsequent increased refund requirements under its Rate Schedule Nos. 215 and 216.

(J) Any party to the proceedings or settlement negotiations having objections to the terms of this order shall within 30 days from the date of issuance of this order set forth such objections in writing to the Commission (original and one copy), and by serving copies on the other parties.

(K) If as a result of any objections filed pursuant to paragraph (J) hereof, the Commission by subsequent order changes Sunray's duties and obligations hereunder, Sunray's acceptance of this settlement order shall not be binding on it without its express agreement.

(L) Within 90 days from the date of this order, Sunray shall make such filings under its rate schedule as are required to make effective the terms of the settlement proposal as modified, including those Rate Schedules in Appendix B.

(M) Upon full compliance by Sunray with all the terms and provisions of this order, the Section 4(e) proceedings listed in Appendices A and B hereto shall terminate except those related to Rate Schedule Nos. 109, 161 and 189 (Docket Nos. RI63–482, RI63–488, RI64–381 and RI64–390) insofar as those proceedings relate to the proper tax reimbursement of the New Mexico Emergency School Tax; and except for the interests of Ashland Oil & Refining Company and Seneca Oil Company in Docket No. RI62–178, insofar as that proceeding pertains to the sale of natural gas to Northern Natural Gas Company in the Southeast Dower Field, Beaver County, Oklahoma, from properties assigned to said producing companies by Sunray.

(N) Upon termination of the Section 4(e) proceedings listed in Appendix C hereto, in accordance with Paragraph (M) above, said proceedings shall be severed from the consolidated proceedings in Docket Nos. AR61–2, AR64–1, and AR64–2, respectively; the Section 7(c) proceedings listed in Appendix C are hereby severed from the consolidated proceeding *Sunray DX Oil Company, et al.*, Docket No. G–4281, *et al.*, subject to final determination in Docket No. R–200.

(O) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Sunray, the Commission staff, or any affected party hereto, in any proceedings now pending, including area rate or similar proceedings, or hereafter instituted by or against Sunray or any other companies, person or parties affected by this order.

*Initial Rate.

**Rate subject to upward Btu adjustment.

***The settlement rates set out herein, unless otherwise noted, are base rates, subject to reductions in the manner and in the amounts set out in the respective rate schedules, where applicable under conditions of sale and/or delivery.

[1] Sunray to delete any favored-nation, price redetermination and fixed price escalation provisions from the rate schedule.

[2] Rate at contract pressure base, 16.4 psia.

[3] Supplement adding acreage.

[4] Supplement adding acreage in Beaver County, Oklahoma.

[5] 16.0¢ rate in effect 11–1–64, Docket RI64–686.

[6] 21.5¢ rate suspended until 4–1–65, Docket RI65–238.

[7] The last firm rate of 11.00123¢ for this rate schedule (109) consists of a 11.0¢ base rate and 0.00123¢ tax reimbursement. In RI63–482, a rate of 11.25286¢ was made effective, consisting of 11.0¢ base rate and 0.25286¢ tax reimbursement. On January 1, 1964, the rate became 12.23085¢ under the contract, consisting of 12.0¢ base and 0.23085¢ tax reimbursement, though through error, a rate of 12.22965¢ was filed in RI64–381 (See Footnote 8). The computation of tax reimbursement is, of course, based upon Sunray's construction of the contract.

[8] The proposed settlement rate represents a corrected computation of the current contract rate, inclusive of tax reimbursement, pursuant to Sunray's construction of the contract. The rate shown in effect 10–1–64 is the filed rate, which contains an arithmetical error in computation of current contract rate.

[9] The last firm rate of 12.0¢ for this rate schedule (161) consists of a 12.0¢ base rate only. In RI63–488, a rate of 12.2295¢ became effective, consisting of 12.0¢ base rate and 0.2295¢ tax reimbursement. In RI64–390, the rate became 13.2486¢, consisting of 13.0¢ based and 0.2486¢ tax reimbursement. In addition, this contract provides a minimum guarantee of 1.0¢ per Mcf for liquids (See Footnote 10). The computation of tax reimbursement is, of course, based upon Sunray's construction of the contract.

[10] Sunray to delete the provision of the contract which guarantees 1.0¢/Mcf for liquids.

[11] The last firm rate of 13.0¢ for this rate schedule (189) consists of a 13.0¢ base rate only. In RI63–482, a rate of 13.24856¢ became effective consisting of 13.0¢ base rate and 0.24856¢ tax reimbursement. In RI64–390, the rate became 14.26775¢, consisting of 14.0¢ base and 0.26775¢ tax reimbursement. The computation of tax reimbursement is, of course, based upon Sunray's construction of the contract.

[12] Listed under both Oklahoma Panhandle and Texas RRC Dist. No. 10.

[13] 17.0¢ settlement rate for gas sold in Oklahoma Panhandle area and 15.0¢ settlement rate for gas sold in Oklahoma Other area.

[14] 17.0¢ rate in effect 11–2–64, Docket No. RI65–182.

[15] Sunray to amend its contract so as to extend the term to expire five (5) years from December 29, 1964.

[16] Abandonment authorized in Docket No. CI62–368.

[17] 17.0¢ rate in effect 11–2–64, Docket No. RI65–183.

[18] Rate stated at 16.7 psia.

[19] Sunray to delete any favored-nation or price redetermination provisions in the rate schedule.

[20] Rates include 0.25¢/Mcf reimbursement for dehydration which is paid by seller to plant processor.

[21] 12.0¢ rate suspended until 3–5–65, Docket No. RI65–226.

[22] Rate increase suspended and made effective subject to refund in Rate Schedule No. 77, which was superseded by Rate Schedule No. 215.

[23] Rate increase suspended and made effective subject to refund in Rate Schedule No. 108 which was superseded by Rate Schedule No. 216.

[24] The Section 4(e) proceedings for this Rate Schedule shall remain open for the determination of the portion of the New Mexico Emergency School Tax which Sunray is entitled to by way of reimbursement.

[25] Docket No. RI62–178 terminated except for the interests of Ashland Oil and Refining Company and Seneca Oil Company.

VERMONT GAS SYSTEMS, INC., DOCKET NOS. CP65–141 AND CP65–142

ORDER DENYING INTERVENTION

(Issued January 29, 1965)

On November 17, 1964, Vermont Gas Systems, Inc. (Applicant) filed in Docket No. CP65–142 an application pursuant to Section 3 of the Natural Gas Act for authorization to import natural gas into the United States from Canada. Concurrently with said application Applicant filed in Docket No. CP65–141 an application pursuant to Executive Order No. 10485 for a permit authorizing the construction and operation of natural gas pipeline facilities at the international boundary between the United States and Canada near Highgate Springs, Vermont, to be used for the importation of natural gas. Applicant proposes to purchase from Trans-Canada Pipe Lines, Limited, and to import into the United States natural gas for distribution in Northwestern Vermont.

On December 28, 1964, Falcon Seaboard Drilling Company (Petitioner) filed in Docket Nos. CP65–141 and CP65–142 a petition pursuant to Section 1.8 of the Commission's Rules of Practice and Procedure for leave to intervene in said proceedings. Petitioner states that it and another company associated with it presently own or have options for oil and gas leases in northwestern Vermont, that it is presently drilling a test well in that area, and that "as a result of drilling operations presently conducted by it, it will be possible to make a reasonable estimate of the likelihood of finding natural gas in this area of Vermont within a reasonable period of time." Petitioner states further that Applicant's proposal for the importation of natural gas represents a direct, immediate and severe economic detriment to Petitioner as a prospective producer of natural gas and competitor for the natural gas market in Vermont.

Section 15(a) of the Natural Gas Act and Section 1.8(b) of the Commission's Rules of Practice and Procedure promulgated thereunder permit intervention by, *inter alia,* (1) competitors whose interest may be directly affected, not adequately represented by existing parties, and as to which interest a petitioner may be bound by the Commission's action in the proceeding, and (2) any other petitioner whose interest is of such nature that its participation may be in the public interest. Petitioner states that it will be bound by the Commission's action in the subject proceedings and aggrieved by the granting of orders as requested by Applicant. Although Petitioner describes itself as a prospective producer of natural gas and competitor for the natural gas market in Vermont, it does not hold itself out as presently ready and able to serve the market. Petitioner has no natural gas to offer for sale and has made no showing that if it ever were to develop natural gas in marketable quantities, grant of the present applications would substantially impair its ability to dispose of the gas at a fair price.

We are not here dealing with competition between pipelines to serve a market where a grant to one may in fact mean the exclusion of the other and where competition can be said to exist where two companies have the potential to bid for future market increments. See *United States* v. *El Paso Natural Gas Co.*, 376 U.S. 651. (Even in such situations, it should be noted, Section 157.11 of our Regulations under the Natural Gas Act provides that an applicant in order to secure comparative consideration must file its competing application not less than 15 days prior to the date of the hearing on the first filed application.) On the contrary, our entire experience has shown that the authorization of some producer sales does not impair the ability of other producers to sell marketable gas. If producers in the exploration or development stage of new operations could, without showing anything more, intervene in any application to bring gas into the general area of their activity it is clear that a serious and quite unnecessary road block would be set up against the efficient administration of the Natural Gas Act. The fact that the present situation involves a protest against applications under section 3 of the Act and Executive Order No. 10485 does not materially change the situation; there is no showing, and no reason to believe, that Applicant's importation of the specified amount of gas would preclude Petitioner from selling any gas it might subsequently develop in marketable quantities to Applicant, to say nothing of other potential purchasers in the area.

Aside from its claims as a potential "competitor" discussed above, the petition to intervene presents nothing to indicate that its grant or petitioner's participation in the proceeding will be in the public interest. Accordingly, we will deny the petition.

The Commission finds:

(1) Petitioner is not a competitor of Applicant's with an interest which may be directly affected and which is not adequately represented by existing parties and as to which petitioners may be bound by the Commission's action in these proceedings.

(2) It is not appropriate in the proper administration of the Natural Gas Act or in the public interest to allow Petitioner, Falcon Seaboard Drilling Company, to intervene in these proceedings.

The Commission orders:

The petition to intervene filed by Falcon Seaboard Drilling Company on December 28, 1964, be and the same is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE SUPERIOR OIL COMPANY v. TRUNKLINE GAS COMPANY, UNION OIL COMPANY OF CALIFORNIA, AND PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI65-300

ORDER DENYING MOTIONS TO DISMISS COMPLAINT UNDER SECTION 5(C) OF THE OUTER CONTINENTAL SHELF LANDS ACT; NOTICE OF AND SETTING PROCEDURES FOR HEARING OF COMPLAINT; AND DISPOSING OF APPLICATIONS FOR SUBPOENAS

(Issued February 1, 1965)*

On September 24, 1964, The Superior Oil Company (Superior) filed a complaint pursuant to Section 5(c)[1] of the Outer Continental Shelf Lands Act (67 Stat. 462) and Section 16 of the Natural Gas Act against Trunkline Gas Company (Trunkline), Union Oil Company of California (Union Oil), and Pan American Petroleum Corporation (Pan American), alleging discrimination arising out of the refusal by Trunkline to buy or transport gas produced by Superior from submerged lands within the vicinity of Trunkline's pipelines while at the same time purchasing natural gas from Union Oil and Pan American from adjoining acreage.

It appears that Trunkline now purchases and transports gas produced by Union Oil and Pan American in the Block 14 Field which is located within the Outer Continental Shelf. The complaint charges, *inter alia*, that Trunkline has discriminated against Superior by depriving Superior of its proportionate rights in the sale of natural gas from Block 14 Field, contrary to Section 5(c) of the Outer Continental Shelf Lands Act, and contrary to the conditions assumed by Trunkline in accepting right-of-way grants for the construction and operation of its natural gas pipelines from the Secretary of Interior. Superior states that it is willing and able to sell its proportionate share of the natural gas underlying the Block 14 Field to Trunkline on such nondiscriminatory terms and in such amounts as the Federal Power Commission may find reasonable.

Superior further alleges that Trunkline would not negotiate with Superior for the purchase and transportation of Superior's natural gas in Block 14 Field upon any terms. (This allegation is denied by Trunkline in its answer.) Superior asserts that the total volume of gas purchased by Trunkline has been produced from horizons and formations underlying Union and Pan American wells, which also underlie and are common with those to which Superior's wells and leases in Block 14 Field are drilled and completed. Superior sets forth its estimate of the total original recoverable natural gas reserves in all of the developed offshore blocks included within the Block 14 Field, and concludes that the proportionate ownership of the parties in interconnected reservoirs of said Block 14 Field, based upon original recoverable gas reserves underlying the leases of the parties is approximately one-third each, *i.e.*, Superior, Union and Pan American.

---

*Reconsideration denied by order issued March 24, 1965, 33 FPC 615.

[1] Section 5(c) of the Outer Continental Shelf Lands Act (OCSLA) provides that:

> Rights-of-way through the submerged lands of the Outer Continental Shelf, whether or not such lands are included in a lease maintained or issued pursuant to this Act, may be granted by the Secretary for pipeline purposes for the transportation of oil, natural gas, or other minerals under such regulations and upon such conditions as the application therefor and the survey, location and width thereof as may be prescribed by the Secretary, and upon the express condition that such oil or gas pipelines shall transport or purchase without discrimination, oil or natural gas produced from said submerged lands in the vicinity of the pipeline in such proportionate amounts as the Federal Power Commission, in the case of gas and the Interstate Commerce Commission, in the case of oil, may, after a full hearing with due notice thereof to the interested parties, determine to be reasonable, taking into account, among other things, conservation and the prevention of waste. Failure to comply with the provisions of this section or the regulations and conditions prescribed thereunder shall be ground for forfeiture of the grant in an appropriate judicial proceeding instituted by the United States in any United States district court having jurisdiction under the provisions of Section 4(b) of this Act.

Superior maintains further that Trunkline is obligated to purchase from Superior, Superior's proportionate share of the whole amount of gas Trunkline has agreed to purchase from Union and Pan American in said Block 14 Field, based upon the respective percentages of the total field recoverable gas reserves underlying the respective leases of said three producers, at the same price, delivery conditions and all other terms of the agreements with Union and Pan American. Superior represents that it will conform to the provisions of the Natural Gas Act and the regulations of this Commission thereunder, in connection with such sale as the Commission may herein see fit to require and authorize.

Answers and motions to dismiss the complaint were filed by all of the respondents. The various grounds for dismissal may be summarized as follows:

(1) Since Superior's leases are located in Zone 2, within the so-called "disputed area" the Federal Power Commission lacks authority to decide the question of whether Superior's leases are subject to the provisions of Section 5(c) of the OCSLA. Enforcement of the Outer Continental Shelf Lands Act must be held in abeyance until a definitive resolution has been reached in *United States* v. *Louisiana*, 363 U.S. 1 (1960) with respect to Louisiana's boundary.

(2) Superior has no standing to invoke the provisions of Section 5(c) of the OCSLA, since it had a purchaser, American-Louisiana (Am-La) ready, willing and able, to purchase its natural gas underlying Block 14 Field. Superior sought and received a certificate from this Commission, dated July 23, 1964, in Opinion No. 437, Docket No. G–6067, 32 FPC 241, to deliver and sell gas to Am-La at an initial price of 18½¢ per Mcf. Superior, however, rejected the certificate because it believed the initial price was too low. In these circumstances the defendants allege that Superior is manifestly employing a complaint under Section 5(c) as a device to attempt to secure a higher price for its gas. This allegation rests upon the fact that in its complaint Superior maintains that in order to be nondiscriminatory, Trunkline is obligated to purchase Superior's proportionate share of the whole amount of gas Trunkline has agreed to purchase from Union and Pan American in Block 14 Field, "at the same price, delivery conditions and all other terms of the agreements with Union and Pan Am." Since Trunkline is paying Pan American and Union for their Block 14 gas 19.5¢ per Mcf pursuant to the Commission's order of March 20, 1964, 31 FPC 616 (Pan American Petroleum Corporation, *et al.*, Docket No. G–15438, *et al.*) Superior would apparently contend that it too is entitled to 19.5¢ per Mcf. This price was a settlement rate in which Pan American and Union Oil were permitted to charge an initial price of 19.5¢ per Mcf for gas being newly certificated from certain deeper horizons in Block 14, and simultaneously agreed to reduce their effective rates of 22½¢ per Mcf for gas being sold from the "shallow rights" under permanent certificates issued prior to the establishment of ceilings for new gas in the Southern Louisiana area.

(3) Superior's leases are not located "in the vicinity" of Trunkline's pipeline within the meaning of those terms in Section 5(c) of the OCSLA and at

least one other natural gas pipeline is located substantially closer to Superior's leases than Trunkline. Additionally, Trunkline's pipeline does not run "through" or traverse leases held by Superior in the Offshore Vermilion Block 14 Field and therefore Trunkline cannot be required under Section 5(c) of the OCSLA to transport or purchase Superior's natural gas. Superior's remedy, if any, must be secured from pipelines with rights-of-way over its leases or at least from the pipeline which has pipeline facilities which are nearest to its lands, alleged to be Transco.

(4) Superior has waived its right to protest the certification by this Commission's order of May 22, 1959, of Union Oil's sales to Trunkline in Docket No. G–15486 and Pan American's sales to Trunkline in Docket No. G–15487 by its failure, after due notice, to petition to intervene in said docket.[3] Superior is barred by laches from asserting any claim against Union Oil, Pan American, and Trunkline under the OCSLA for the reason that the sales of gas of which it now complains were certificated by the Federal Power Commission and begun nearly five years ago. A decision by the Commission permitting Superior now collaterally to attack the valid and permanent certificates which were issued therein would retroactively violate the producers' rights under the Constitution of the United States and the Natural Gas Act.

(5) If Superior is seeking an order which would have the effect of compelling involuntary expansion or construction of additional facilities by Trunkline, Superior is seeking an order which this Commission may not lawfully issue under Section 7 of the Natural Gas Act.

We have concluded that none of the various reasons advanced for dismissing the complaint are sound and that the matter should be set for hearing as contemplated by the provisions of Section 5 of the Outer Continental Shelf Lands Act.

(1) The fact that an issue which is relevant to our determination is also pending before the Supreme Court cannot constitute grounds for dismissing the complaint. The OCSLA, and specifically Section 5 thereof, is presently in effect and Superior's rights to a Commission determination thereunder are not tolled by the absence of any Supreme Court resolution of the jurisdictional status of the lands in question, any more than rights under any other statute are in abeyance while the cases involving their constitutionality or meaning are pending before the Supreme Court. There is nothing in any of the decisions or orders of the Supreme Court throughout the Tidelands' litigation which directs or even suggests that agencies of the federal government refrain from taking actions required of them by the OCSLA pending the Court's resolution of the jurisdictional question left for its subsequent consideration.

Unlike some of the problems created by the unresolved contest between the United States and the State of Louisiana over title to the lands in question, the exercise of our responsibilities under Section 5 of the OCSLA cannot affect the relative rights of the United States and Louisiana to tax or other revenues from operations thereon. Moreover, it is to be noted that the United States and the State of Louisiana have worked out a mutually satisfactory arrangement under which operations may continue in the disputed area pending resolution of the jurisdictional issue. See agreement between United States and State of Louisiana pursuant to OCSLA, dated October 12, 1956.

If the jurisdictional question were the only issue involved in resolving Superior's complaint it could be contended that the Commission should defer setting the matter for hearing until the Supreme Court acts, though even in such circumstances Superior might well argue that it was entitled to an immediate Commission determination since only through such a first-step determination could its alleged rights be ultimately protected. However, the complaint and the answers thereto raise a large number of other difficult questions of first impression, resolution of which will necessarily take time. In view of this fact, it would clearly be improper to defer setting the matter for hearing merely because it is possible that action by the Supreme Court during the pendency of our proceeding might require dismissal of the complaint or otherwise affect our consideration of the issue.

---

[3] Trunkline Gas Company, *et al.*, Docket No. G–15394, *et al.*, Opinion No. 321, 21 FPC 704, issued May 22, 1959.

(2) The related arguments that the complaint must be dismissed because Superior has in American-Louisiana a willing and able pipeline purchaser for its Block 14 gas and that the entire complaint in reality is merely an attempt to secure a higher price for its gas than the Commission was willing to grant it in the proceeding in which it certificated Superior's sale to American-Louisiana, are also without validity. American-Louisiana is not and has never been an existing pipeline having rights-of-way "in the vicinity" of Superior's leases in Block 14 granted by the Secretary of Interior through the submerged lands of the Outer Continental Shelf under Section 5 of the OCSLA. Superior's proposal in its application to sell a specified amount of gas to American-Louisiana contemplated that Superior would build a 28 mile line to get the gas from its off-shore platform into American-Louisiana's pipeline facilities on-shore.

Speculations as to Superior's ultimate motives in bringing the complaint cannot form the basis for dismissal. Even if the price at which it might be eventually authorized to sell gas to Trunkline was no higher than that at which the Commission authorized it to sell gas on-shore to American-Louisiana (and no larger amounts were involved), Superior would obviously be better off if it had a right to make the sale to Trunkline at or near the terminus of Trunkline's existing pipeline running to Block 14. In any event, the argument reflects a misconception as to the relationship of our responsibilities under Section 5 of the OCSLA and Section 7 of the Natural Gas Act.

The two statutes, it is clear, can and should be read so that they will be complementary to one another. Any obligation that a pipeline might have under Section 5 of the OCSLA is, we believe, limited to an obligation to contract with a producer to purchase or transport proportionate amounts of gas on nondiscriminatory terms (and to file and prosecute certificate applications with the Commission under the Natural Gas Act to effectuate such contracts); such contracts necessarily remain fully subject to modification or rejection by the Commission if, in the subsequent exercise of its authority under Section 7 of the Natural Gas Act, it is not able to conclude that the application to effectuate the contract is required by present or future public convenience or necessity. Thus, a pipeline which has contracted with a producer to purchase off-shore gas at 20¢ might be under an obligation under Section 5 of the OCSLA to contract to purchase proportionate amounts of gas from another off-shore producer at 20¢, but this would not compel the Commission to certificate the sale at the price if it were not required by public convenience and necessity—even assuming it had certificated the original sale at such price. At the same time, the likelihood or even the certainty that the Commission under established policies would not certificate a sale at an initial price of more than the 18.5¢ previously found to be appropriate for new sales in the area, would not necessarily mean that 18.5¢ would be the non-discriminatory rate to which the producer would be entitled to have the pipeline contract to pay under Section 5 of the OCSLA. In sum, the price determinations to be made under the two statutes are independent of one another and based on different standards.

(3) Several of the respondents argue that Trunkline has no right-of-way over Superior's leases, but only across submerged lands leased to Union and Pan American, and that Trunkline's obligations under Section 5(c) are limited to the transportation or purchase of natural gas produced from the lands over which it has rights-of-way. The answer to this contention is that the controlling geographical test of a pipeline's potential obligation under Section 5(c) of the OCSLA is whether its lands are located "in the vicinity" of the complainant's acreage, not whether it traverses it. Without finally resolving this issue, it is clear from the pleadings that Trunkline may reasonably be held to be "in the vicinity" of Superior's leases for the purpose of determining whether to hear Superior's complaint.

(4) Collateral to this argument is the contention that Transco has been granted a right-of-way for a pipeline that directly traverses the Superior leases in Block 14 and that it is to this allegedly closer pipeline rather than to Trunkline that Superior must look for any determination under Section 5 of the OCSLA. It can be argued that where two pipelines have rights-of-way across the submerged lands of the Outer Continental Shelf both of which are "in the vicinity" of a producer's leases, the producer has a right to seek relief under the OCSLA against either pipeline, regardless of which is closer to its leases. Regardless of the merits of any such argument we see no basis for concluding that a producer in such a situation must seek relief from the pipeline which is nearer to its lease where (as in the case with Transco) the nearer pipeline is not making any purchases "in the vicinity" and has no facilities to do so, and another nearby pipeline (as does Trunkline) is taking gas from two producers with adjoining leases in the same block, which are allegedly part of the same geological formation.

(5) Several of the respondents contend that the failure of Superior to contest or object to the original certificates issued to Pan American and Union in 1959 to sell gas to Trunkline from their Block 14 leases here in issue plus the similar failure to intervene in the recent proceeding with authorized additional sales from the deeper horizons, constitutes laches. However, the question of laches is always a factual one which except in the most unusual circumstances, not presented here, does not lend itself to a motion to dismiss. Moreover, it is clear that if the laches doctrine applies at all, it relates not to what Superior should have done with respect to the Pan American or Union certificate orders, but whether it has unduly delayed in bringing the present complaint to the prejudice of the respondents.

(6) The contention that Superior's complaint constitutes an impermissible collateral attack upon the certificates heretofore issued by the Commission to Pan American and Union is not a valid basis for dismissal. There is nothing before the Commission at present indicating that if Trunkline were to be found to be under an obligation to purchase proportionate amounts of gas from Superior, it could not do so without cutting back on the minimum amounts of gas it contracted to take from Pan American and Union in the certificated sales. Assuming, however, that this might prove to be the case, we do not believe it would necessarily bar relief to Superior under the OCSLA.

(7) In a related argument respondents contend that in order to meet Superior's claims Trunkline might have to extend or enlarge its pipeline facilities extending to Block 14, and the Commission has no authority under the Natural Gas Act to order such extensions or enlargements. On the face of the pleadings there is no reason to assume that Trunkline as a result of such an order, will, as a practical matter, be obliged to extend or enlarge its existing facilities. In any event we are not persuaded that Superior's complaint under the OCSLA should

be dismissed because the Commission lacks the power to order extensions or enlargements under the Natural Gas Act.

Finally, we turn to the question of Superior's application for subpoenas and depositions. Subsequent to the filing of the complaint, Superior applied for subpoenas duces tecum and an order authorizing the taking of depositions addressed to Union Oil Company and Pan American. Superior requests that documentary evidence be produced by Pan American and Union showing *inter alia* copies of all well logs, analysis of core samples, directional well surveys, pressure tests and geological structure maps relating to wells drilled in Blocks 14, 15, 26 and 27 and 35 offshore Vermilion Area, Louisiana. Superior alleges that the data and information sought is relevant and material to this proceeding, since the primary issue herein is the determination of the proportionate share of the natural gas which Trunkline transports or purchases from the Block 14 Field to which Superior is "reasonably entitled" under Section 5(c) of the Outer Continental Shelf Lands Act. Superior maintains that resolution of this issue will involve among other things, determination of the productive limits of the field and each horizon therein; the total gas reserves of each separate horizon, initially, and remaining; and the depth, areal extent and interconnection of such formations.

Superior also applies for an order of the Commission for the taking of oral depositions of the respective Presidents of Trunkline, Union and Pan American, for the purpose of identifying the documentary evidence sought from these defendants by the above subpoenas.

Each of the defendants has filed an answer to Superior's application for subpoenas and depositions. Union indicates that if Superior were permitted to "launch" such an "ill-conceived discovery program", the other parties would be required to protect themselves by filing equally broad and complex applications for the issuance of subpoenas against Superior's executives. Trunkline submits that Superior is not entitled to examine the data which it seeks, and that, in any event, requests for subpoenas are premature at this stage, since the Commission now has before it motions to dismiss, which, if granted will obviate the necessity to deal with the application for depositions. Furthermore, Trunkline indicates that until the issues have been delineated, fundamental questions of relevancy and materiality cannot be passed upon. In addition, Trunkline states that all of the material sought by Superior is regarded as highly confidential by each company possessing such data. Pan American in its opposition to the application for subpoenas states that Superior fails to show that there is any immediate need for these specific data for preparation of exhibits by Superior or for any other evidence Superior states it proposes or intends to offer at hearing. Pan American further indicates that Superior has failed to specify its intended use of such data with particularity, and has failed to establish the requisite foundation of relevance and materiality.

We do not doubt that there may be circumstances under which the type of information sought by Superior would be relevant to a Section 5(c) determination and, to the extent that it is solely within the knowledge or possession of the respondents, would properly be the subject of subpoenas or other discovery procedures. It is clear that, if Superior is otherwise entitled to relief, it cannot show what would be its proportionate amount of gas and may not be able to show further material but contested facts unless it has access to the otherwise confidential files of the respondents. We do not think, however, that it is either necessary or appropriate for us to pass upon the specific applications for subpoenas and depositions at this time; while the normally confidential nature of these important business documents and information would not make them immune from proper disclosure when necessary, we should not lend ourselves to the unrestricted examination of such material by competitors unless it is clearly necessary to the proof of a party's case. There could well be developments in the course of the hearing which would moot Superior's need for some or all of this information. Thus, it is by no means impossible that the parties could stipulate as to the reserves underlying their respective leases and the geological relationship of the various horizons.

Accordingly, we shall deny Superior's request for subpoenas and depositions without prejudice to their resubmission to the hearing examiner at an appropriate stage of the hearing we are now ordering. Prior to such submission, we shall expect the parties to explore among themselves and with the hearing examiner if necessary the question as to whether appropriate factual stipulations cannot be arrived at which will obviate the need for recourse to subpoenas or depositions by any of the parties.

The Commission orders:

(A) The motions to dismiss the complaint of Superior under Section 5(c) of the OCSLA should be and hereby are denied.

(B) The application for subpoenas and the request for an order to take depositions by Superior are hereby denied, subject to renewal before the hearing examiner.

(C) Superior's request that its complaint be taken as an application pursuant to Section 7 of the Natural Gas Act for authority to sell natural gas to Trunkline is hereby denied.

(D) A hearing of Superior's complaint under Section 5(c) of the OCSLA against the named respondents shall commence on March 2, 1965, 10 A.M., at a Hearing Room of the Federal Power Commission, at which time all parties named in the aforesaid complaint shall appear before a hearing examiner to be designated by the Chief Examiner of the Federal Power Commission for the purpose of (1) a pretrial hearing, (2) the clarification of issues, (3) determination of the order of presentation of evidence, (4) the determination of the relevance of any application for subpoenas and depositions to the issues of this proceeding, and setting a date for further hearing and presentation of evidence.

(E) Petitions to intervene shall be filed within 20 days from date of issuance of this order.

OPINION NO. 448

HOPE NATURAL GAS COMPANY, DOCKET NO. CP63-272

OPINION AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND DENYING REQUEST FOR ORAL ARGUMENT

(Issued February 2, 1965)*

Syllabus

1. Commission *concludes* certificate should issue authorizing merger of affiliated companies and allowing proposed accounting procedure as an interim measure, subject to specified conditions. P. 154.
2. Benefits claimed from merger are numerous and desirable—contrary to Cities' claim, evidence shows that all anticipated savings and other economies could not be accomplished in absence of complete merger. PP. 154, 155.

---

*Initial decision appears on P. 159. Rehearing denied by order issued March 22, 1965, 33 FPC. 590. Affirmed, *sub nom. Canton, Cleveland and Massilon, Ohio.* v. *F.P.C.*, 360 F. 2d 521 (CADC–1966).

3. Rejecting contention of Cities, Commission finds no evidence to support or reason to believe that rate increase would result from merger. P. 155.

4. Where no rate change will be occasioned by authorization of merger, question of propriety of existing rates which will not be adversely affected thereby, is not relevant to Section 7 determination. P. 155.

5. Permissive language of Section 4 does not require applicant to file storage accounting proposal as rate change since change necessitating revised accounting is to be change in circumstance, *i.e.* corporate merger and no "change in rate" will actually be effected. P. 155.

6. Approval of accounting procedure limited to period of three years following initiation of operations by merged company. P. 156.

7. Authorization of merger conditioned with respect to: (1) Moratorium on rate increase; (2) cost of service in future rate proceedings; (3) accounting procedures; and (4) treatment to be accorded storage costs in any future rate proceeding. P. 156.

8. Commission *issues* certificate authorizing merger of affiliated companies, in proceeding arising under Section 7 of the Natural Gas Act.

Norman A. Flaningam, Thomas A. White, C. William Cooper and *Thomas F. Brosnan* for Hope Natural Gas Company.

Lauman Martin, James O'Malley, Jr. and *Eugene B. Thomas, Jr.* for Niagara Mohawk Power Corporation.

Keith M. Pyburn, Jack D. Head, and *Bolivar Andrews* for Texas Eastern Transmission Corporation.

Louis R. Reif for Iroquois Gas Corporation.

W. K. Scott, Jr. for Empire Gas and Fuel Company, Iroquois Gas Corporation, Pennsylvania Gas Company, United Natural Gas Company.

Richard N. George, Calvin S. Kellogg, and *Francis E. Drake, Jr.* for Rochester Gas and Electric Corporation.

Franklin B. Gilmore, George Failey, F. J. Walsh, and *Norman O. Besheer* for North Penn Gas Company.

Frederic H. Lawrence and *L. W. Hasbrouck* for New York State Electric & Gas Corporation.

Thomas M. Rutter for the County of Allegheny, Pennsylvania.

Robert L. Stewart for Public Service Commission of West Virginia.

Richard G. Reichel for City of Massillon, Ohio.

James L. Harkins, Jr. and *Bronis J. Klementowicz* for City of Cleveland, Ohio.

Charles R. Brown for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

O'CONNOR, *Commissioner:*

This proceeding involves a proposal for a corporate merger without intended change in rates or services. By application filed April 5, 1963, and later supplemented on May 1, 1963 and June 12, 1964, Hope Natural Gas Company (Hope or applicant), a West Virginia corporation having its principal office in Clarksburg, West Virginia, seeks a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act authorizing it to acquire by merger and to operate all the natural gas facilities of its affiliate, New York State Natural Gas Corporation (New York Natural), a New York corporation with its principal office in Pittsburgh, Pennsylvania. Hope proposes to acquire all the assets and liabilities of New York Natural and will perform all acts, make all sales and render all services now being performed by and required of New York Natural under outstanding certificates issued by the Commission. Upon consummation of the merger and the securance of all necessary regulatory approvals the surviving corporation, with its name changed to Consolidated Gas Supply Corporation and having its principal place of business in Clarksburg, will make all sales and will render all services presently being performed by the two corporations, with one exception to be hereinafter discussed. New York Natural, having been divested of all legal rights and responsibilities, presumably will be dissolved; at least it will no longer be a "natural-gas company" as defined in the Natural Gas Act. The sales contracts and tariffs of Hope and New York Natural will be adopted by the surviving corporation, which will carry out the obligations of both companies under their respective rate filings and settlement agreements.[1] The intrastate operations now conducted by Hope in West Virginia will be carried on by the merged company in the same manner as at present but under the name of Hope Natural Gas Company, a Division of Consolidated Gas Supply Corporation.

Hope and New York Natural are two of six[2] wholly-owned operating subsidiaries of Consolidated Natural Gas Company, a registered public utility holding company, comprising an integrated natural gas system and engaging in all phases of the natural gas business. The companies are similar in many respects. Each produces and purchases natural gas, each makes purchases of substantial quantities of natural gas from the south and southwest, each maintains extensive underground gas storage pools and each owns and operates a gas transmission system and makes interstate sales, in part to common customers within the Consolidated System and in part to non-affiliated wholesale customers. As stated in the initial decision, the real difference in the systems is one of geography; Hope operates in Virginia and West Virginia while New York Natural operates in Pennsylvania and New York. The systems are interconnected at the West Virginia-Pennsylvania border.

Applicant justifies its request on the grounds that the simplified corporate structure will eliminate a substantial duplication of personnel, reduce regulatory expenses, work improvements through the unification of various technical divisions, and will provide for more efficient procurement and operational procedures. Although a nonrecurring expense of $941,887 will be incurred in connection with the merger, applicant estimates that an annual reduction of approximately $1,600,000 in the cost-of-service will be achieved by the third year of operation of the combined companies. The greatest single item of saving would result from a reduction of 175 in the number of employees required to operate the merged company. The annual payroll costs attributed to these positions is $1,720,796. Although a total of 118 vacancies existed on the personnel rolls of Hope and New York Natural as of July 31, 1964 (75 Hope and 43 New York Natural), all but 30 of the vacant regular positions were being filled by temporary employees. The unfilled vacancies were entirely within the New York Natural organization. Applicant testified that New York Natural would be unable to continue to operate on such basis for any sustained period of time without significantly impairing its operating position. Applicant's plans, described by the examiner, ameliorate to the greatest possible degree the effects on the incumbents of the reduction in force and seek to assure that few if any employees, or their families, would be adversely affected by the merger.

---

[1] As approved in *New York State Natural Gas Corporation*, Docket No. RP64-40, 32 FPC 198, issued July 17, 1964; *Hope Natural Gas Company*, Docket No. G-5474, *et al.*, 28 FPC 958.

[2] The others are The East Ohio Gas Company, The Peoples Natural Gas Company, The River Gas Company and the Lake Shore Pipe Line Company. A non-operating company, Con-Gas Service Corporation, provides certain services to the affiliated companies.

An additional decrease in the cost-of-service would be realized in the elimination of an office rental expense now incurred by New York Natural. Both this and the anticipated payroll savings would be offset to an extent by the costs involved in setting up new offices and other plant facilities. Nevertheless the evidence establishes that a very real annual saving in excess of $1.5 million may justifiably be expected from the merger.

The application is supported by Texas Eastern Transmission Corporation, a major supplier of both applicant and New York Natural and which intervened in the proceeding, and by the Commission's staff. The proposal has been opposed by the three Ohio cities of Cleveland, Canton and Massillon (Cities) which argue that the merger is unnecessary to achieve the desired cost savings and that a rate question is involved.[3] The Cities' interest in the proceeding derives from the fact that each is served exclusively by The East Ohio Gas Company, also an affiliate of the Consolidated System,[4] and that Hope and New York Natural are major suppliers to East Ohio.[5] Their contention, in essence, is that the merger should not be approved in the absence of a thorough inquiry into possible future changes in cost allocation and rate design of the merged corporation, that the examiner improperly excluded questions regarding the effect of the merger upon rates, and that approval of the merger as proposed will effect a present rate change and will almost inevitably give rise to future rate changes of unknown dimensions. Thus, they argue, the fact that a relatively "minimal" cost reduction of $1,600,000 per year may or will be achieved by the merger should not be dispositive when to permit the merger could lead to changes involving substantially greater amounts.

Notwithstanding any future plans applicant may have for changes in rates and rate design of the combined companies, none being involved in the instant proposal, one problem is presented in the plan to continue all the present sales of applicant and New York Natural at the same rates. Unlike the other rate schedules of the two companies which carry fixed prices, New York Natural's OSS Rate Schedule as contained in Volume 2 of its FPC Gas Tariff embodies a cost-of-service formula under which the charges include, as a major element, the cost of gas withdrawn from storage.[6] Approximately 12 percent of New York Natural's gas supply is purchased from Hope. With the merger, this sale naturally would cease, the two companies being one; the physical flow of gas into the former New York Natural storage pools will, however, remain wholly without change. The problem is how to continue to reflect in the OSS cost-of-service form rate schedule the cost element comprising the per Mcf price now paid by New York Natural to Hope. Sales under the OSS schedule are made to East Ohio, supplying the Cities, and to Peoples Natural Gas Company. Without the utilization of some formula designed to record a gas purchase cost equal to the price now paid Hope by New York Natural, the storage input rate charged the former New York Natural pools would not reflect all the dollar effect of the costs presently included and, as a result, the charges under the OSS rate schedule would drop significantly without any corresponding reduction in the costs to the combined companies.

---

[3] Although a number of other customer-distributors of Hope and New York Natural were granted intervention, they did not request a formal hearing on the application and were willing to have the certificate granted in a summary proceeding.

[4] Note 2, *supra*.

[5] In 1963 East Ohio purchases from Hope and New York Natural represented 40 percent of its total system requirements and 69 percent and 14 percent, respectively, of the total jurisdictional pipeline sales of these supplier companies. Over 30 percent of East Ohio's sales were made within the Cities.

[6] Natural has organized its properties into two systems—one its OSS System and the other its General System. The OSS System comprises the Oakford and South Bend storage pools near Pittsburgh and their appurtenant facilities. The remainder of Natural's properties, serving 16 nonaffiliated distributors in Pennsylvania and New York, is called its General System. The General System services the OSS System under certain conditions, not here material, but the latter provides no reciprocal service to the General System.

It was to meet this situation that applicant has proposed the following two-part procedure: (1) Consolidated Gas Supply would continue to separately price the gas stored in the former Hope and New York Natural storage pools in the same manner as presently performed, except that (2) in calculating the weighted average cost of gas acquired for the continuance of the former New York Natural operations and actually injected into those storage pools, there would be substituted for Hope's present supply to New York Natural the cost of gas now purchased by Hope in Louisiana. In other words the gas purchase costs incurred by the surviving corporation in taking over Hope's purchase obligations in Louisiana would be charged to the former New York Natural pools instead of the former Hope pools. The proposed storage accounting was tested against actual operations in 1963, the last full calendar year for which figures were available, and was projected against the estimated operations in 1965, assuming the latter to be the first year of operations of merged company. The results showed that the total effect of the proposed accounting procedure would be to decrease the charges to East Ohio and Peoples by $3,000 to $4,000 per annum, or a change of only $\frac{2}{100}$ of one percent when compared to annual billings for gas under the OSS schedule exceeding $13,000,000 per year.

The examiner, in a decision issued November 18, 1964, has recommended that the merger be approved as coming well within the public convenience and necessity standard of Section 7 of the Act. He concluded, however, that it would be necessary for Consolidated Gas Supply to file the proposed accounting method as a rate change under Section 4 and has conditioned his decision permitting the merger upon such a filing. The Cities, in excepting to the decision, continue to insist that the merger is an unnecessary means to achieve the desirable end of a cost reduction and therefore should not be permitted, particularly as the applicant "has refused to reveal the impact the merger would have on its customers." They also contend that, if the merger is approved, applicant should be required to flow-through the benefits of any cost savings to its customers, including any that result from the reduction in the federal income tax rate which recently became effective, and that the proposed accounting procedure should be rejected for not having been filed under Section 4. Finally, they contend that the examiner's decision in requiring a Section 4 filing illegally "orders" the applicant to file for a rate increase.

On consideration of the record it is our conclusion that a certificate should be issued to Hope allowing the merger to be effected and that the accounting procedure proposed by applicant may be allowed as an interim measure, subject to certain conditions as hereinafter specified.

By this application the parent Consolidated System appears to be embarking upon the same sort of corporate realignment initiated some years ago by the Columbia Gas System, Inc., and approved by the Commission in various of its facets. See *The Manufacturers Light and Heat Company*, Docket No. CP61-60, 26 FPC 537 (1961) and dockets cited; *The Ohio Fuel Gas Company*, Docket No. CP62-153, 29 FPC 1134 (1963); and *United Fuel Gas Company, et al.*, Opinion No. 377, 29 FPC 90 (1963). While the ultimate aims of the two systems may not be identical in all respects, both have among their objectives a simplification program designed to produce a corporate structure consisting of the minimum number of companies required to carry on the System's business with the greatest efficiency and in the most economical manner. The benefits claimed from the merger are numerous and desirable. Not only will significant immediate cost savings be achieved, but various duplications of functions and complex intercompany transactions will be eliminated, regulatory expenses will be reduced and, all in all, the surviving corporation will be better able to perform the business of supplying natural gas to distributing companies and gas consumers at the lowest reasonable rate. The evidence shows, contrary to the Cities' claim, that all of the anticipated savings and other economies could not be accomplished in the absence of a complete merger of the two companies. Although the record does not fix a precise dollar amount on all the various operational economies, it does indicate that savings in costs beyond those detailed will result, which will ultimately benefit the consuming public.[7]

In our opinion the examiner properly resisted the effort by the Cities to inject major cost allocation and rate design considerations into the case. The Cities were granted ample opportunity to show that a rate increase would result from the merger. No evidence to this effect was presented in the record and, based upon the facts as developed, we have no reason to believe that the merger could have such an effect. Apart from the earlier described substitution in charges under the OSS schedule, which in itself will occasion a minor decrease in charges to East Ohio, the only effect properly attributable to the merger is the anticipated $1,600,000 reduction in the cost of service. Where no rate change will be occasioned by the issuance of a certificate authorizing the merger, a question of the propriety of existing rates which will not be adversely affected by the merger, such as the allegedly excessive contract demand charged by Hope to East Ohio, is not relevant to a determination under Section 7. This and other similar matters will be considered when properly raised, as in the case of a future filing of new rates by the surviving company or in a Section 5(a) proceeding initiated by the Commission either on its own motion or on an adequately supported complaint.[8] Since there is no basis for concluding that any jurisdictional customer of Hope or New York Natural, including East Ohio, will be adversely affected by the allowance of the merger, there is no reason why the certificate should not be granted.

We do not agree with the examiner that applicant must file its storage accounting proposal as a rate change under Section 4. The change giving rise to the necessity for the revised accounting procedure is to be a change in circumstance, namely, the corporate merger, and no "change in rate" actually will be effected. Instead, the procedure will simply maintain the existing level of rates to the greatest possible degree. Moreover, the procedure will be employed only on an interim basis. Under these circumstances, the permissive language of Section 4 does not necessitate the examiner's filing requirement.

However, we do not give unconditional sanction to the costing procedure. Our determination to allow the procedure to be used is strongly influenced by the showing that only a negligible difference in charges will result during 1965. Whether this will hold true in subsequent years cannot now be determined.

---

[7] As stated in the *Ohio Fuel* case (29 FPC 1134, 1140): "The program of corporate realignment, of which the present application is a step therein, will result in a more simple and economical operation, particularly as to corporate accounting, management, and regulatory matters, all to the benefit of the ultimate consumer. The simplification of the regulatory process is in and of itself sufficient justification for the realignment."

[8] *Accord, Pacific Northwest Pipeline Corp.*, 23 FPC 350, 351 (1960), *aff'd sub nom, California* v. *F.P.C.*, 296 F. 2d 348, 352 (1961), *rev'd on other grounds*, 369 U.S. 482 (1962); *The Ohio Fuel Gas Co.*, 29 FPC 1134, 1136 (1963). See also, *City of Cleveland, Ohio* v. *Hope Natural Gas Co.* and *New York State Natural Gas Corp.*, Docket Nos. RP64-3 and RP64-14, Orders Dismissing Complaints issued July 17, 1964, 32 FPC 156, 157.

Accordingly, we shall limit our approval of the accounting procedure to a period of 3 years following the initiation of operations by the merged company. Following the submission of the actual operating figures for 1965, we will scrutinize carefully the rate structure and charges of the merged company. Further, and in keeping both with the *ad hoc* nature of the procedure and its interim status, we conclude that the following additional limitations are required in the public interest as conditions to the issuance of the certificate herein: (1) a moratorium on all future rate increase filings by the merged company so as not to be effective after suspension prior to January 1, 1967, except as necessary to reflect increases in excess of $250,000 in purchased gas costs, any such increase to be offset by any rate reduction required to be made effective at or about the same time pursuant to any obligations remaining in Docket No. G-5474, *et al.*, and RP64-40; (2) the cost-of-service filed by the surviving corporation with the Commission in any future rate proceeding shall reflect the annual savings in costs realized from the merger; (3) the maintenance of suitable accounts and subaccounts to enable the isolation of costs chargeable to the former OSS System of New York Natural and to ascertain costs by zones and geographical areas in the same manner as is presently the case for each of the two companies, such data to be available for application in any future ratemaking proceeding; and (4) that the accounting for storage method as herein allowed shall be without prejudice to applicant or this Commission as to the treatment to be accorded storage costs in any future rate proceeding involving the merged corporation. These conditions, with the moratorium extended by one-half year, are in accord with a stipulation proposed by applicant on September 25, 1964. As so conditioned it is our opinion that the certificate for which application is made should be issued.

Applicant has indicated its desire to have the merger take place as soon as possible. The merger has been approved by the Public Service Commission of the State of West Virginia and has been favorably ruled upon by the Internal Revenue Service. Approval by the Securities and Exchange Commission will be sought following the Commission's authorization. The certificate herein issued will be conditioned thereon.

In their exceptions to the initial decision, the Cities request an opportunity to present oral argument before the Commission. We conclude that no useful purpose would be served by such argument and that the request should be denied. The exceptions not discussed herein are disposed of by the examiner's discussion or are immaterial to the result in this case. Except to the extent granted herein, all exceptions filed are without substantial support or reasonable basis in law and should be denied. The examiner's decision should be modified in accordance with this opinion and as so modified should, with this opinion, constitute the decision of the Commission.

The Commission further finds:

(1) Hope Natural Gas Company, a West Virginia corporation with its principal place of business in Clarksburg, West Virginia (which is to be renamed Consolidated Gas Supply Corporation), is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) New York State Natural Gas Corporation, a New York corporation with its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities of New York State Natural Gas Corporation, as more fully described in the application and the evidence herein, are proposed to be acquired by merger and operated by Hope for the transportation and sale of natural gas

in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition and operation of these facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sales of natural gas made from and other services rendered by the facilities to be acquired from New York Natural will be in interstate commerce, subject to the jurisdiction of the Commission, and are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Subject to the requirements of this order and the conditions of the certificate issued hereunder, Hope is able and willing properly to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act, and to the requirements, rules and regulations of the Commission thereunder.

(6) The acquisition and continued operation of the facilities proposed to be acquired by Hope from New York Natural, and the sales of natural gas and other services proposed, are subject to the jurisdiction of the Commission and are required by the public convenience and necessity, and a certificate therefor should issue as hereinafter ordered and conditioned.

(7) The conditions attached to the certificate herein issued are required by the public convenience and necessity.

(8) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued, upon the terms and conditions of this order and subject to all provisions of the Natural Gas Act and the Commission's Regulations thereunder, authorizing Hope Natural Gas Company to acquire and operate, under the name of Consolidated Gas Supply Corporation, all of the natural gas facilities of New York State Natural Gas Corporation subject to the jurisdiction of the Commission, as more fully described in Hope's application in Docket No. CP63-272.

(B) The name of Consolidated Gas Supply Corporation be and the same is hereby substituted, effective as of the date of consummation of the merger of New York State Natural Gas Corporation into Hope Natural Gas Company, for that of Hope and of New York Natural in all certificate and other authorizations heretofore issued pursuant to the Natural Gas Act by this Commission to the respective companies.

(C) The certificate issued by paragraph (A) above, and the amendments to the certificates effected by paragraph (B) above, and all rights granted thereunder are conditioned upon applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (d)(1), (d)(2) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act.

(D) Substantially concurrently with the consummation of the merger contemplated by this order, Consolidated Gas Supply Corporation shall file with the Commission, in accordance with its Regulations under the Natural Gas Act, the following:

(i) Notice of Cancellation of Hope's service agreement with New York Natural in accordance with the form set forth in Schedule 1 of Exhibit 6.

(ii) Certificate of Adoption of New York Natural's FPC Gas Tariff, Third Revised Volume No. 1. together with service agreements thereunder currently in effect, and its FPC Gas Tariff, Original Volume No. 2, together with the contracts embodied therein as special rate schedules, in accordance with the form set forth in Schedule 2 of Exhibit 6.

(iii) Notice of Change of Name pertaining to Hope's FPC Gas Tariff, First Revised Volumes Nos. 1 and 2, and its related service agreements and contracts on file with the Commission, in accordance with the form set forth in Schedule 3 of Exhibit 6.

(E) Within 90 days following the filings referred to in paragraph (D) above, Consolidated Gas Supply Corporation shall file with the Commission a tariff with the sheets bearing the correct name of that company to replace the tariff of Hope continued in effect and the tariff of New York Natural previously adopted. This tariff will take the form of three volumes, as follows:

(i) *Original Volume No. 1*—will embody the rate schedules now contained in First Revised Volume No. 1 of Hope's FPC Gas Tariff and Third Revised Volume No. 1 of New York Natural's FPC Gas Tariff with appropriate company name and other formal changes, including redesignations of the rate schedules to reflect the continuation of Hope's rate zones 1 and 2 with the same designations and the continuation of New York Natural's rate zones 1 through 4 redesignated as zones 3 through 6.

(ii) *Original Volume No. 2*—will embody the special rate schedules now contained in Original Volume No. 2 of New York Natural's FPC Gas Tariff with the appropriate company name and other formal changes.

(iii) *Original Volume No. 3*—will embody the special rate schedules now included in Original Volume No. 2 of Hope's FPC Gas Tariff with appropriate company name and other formal changes.

(F) The storage accounting procedure proposed to be followed after the merger, as more fully described in the application and in the evidence herein, be and the same is hereby approved, effective from and after the merger of New York Natural into Hope, subject to the following conditions:

(i) Approval of the accounting procedure is limited to a period of three years following the initiation of operations by the merged company.

(ii) Consolidated Gas Supply Corporation shall not submit any rate increase filing to the Commission to be effective after suspension prior to January 1, 1967, except as necessary to reflect increases in excess of $250,000 in purchased gas costs, any such increase to be offset by any rate reduction required to be made effective at or about the same time pursuant to any obligations remaining in Docket No. G-5474, *et al.*, and RP64-40.

(iii) Any cost-of-service filed by the surviving corporation in any future rate proceeding shall reflect the annual savings in costs realized from the merger.

(iv) Consolidated Gas Supply Corporation shall maintain suitable accounts and subaccounts to enable the isolation of costs chargeable to the former OSS System of New York Natural and to ascertain costs by zones and geographical areas in the same manner as is presently the case for each of the two companies, such data to be available for application in any future ratemaking proceeding.

(v) Approval of the accounting method is without prejudice to Consolidated Gas Supply Corporation or the Commission as to the treatment to be accorded storage costs in any future rate proceeding involving the merged company.

(G) The effectiveness of the certificates issued and amended by paragraphs (A) and (B) above is conditioned upon the applicant's first obtaining the necessary approval from the Securities and Exchange Commission.

(H) The certificate issued in paragraph (A) above shall be accepted in writing and under oath by the applicant within 30 days of the date of issuance of this order; upon consummation of the merger applicant shall, within 10 days thereof, report such fact to the Commission, together with the effective date thereof.

(I) The certificates herein issued and amended are not transferable and shall be effective only so long as the applicant continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(J) The motion for opportunity to present oral argument before the Commission is denied.

(K) Except as herein granted, the exceptions to the examiner's decision are hereby denied.

(L) The examiner's decision, to the extent not inconsistent herewith, is hereby adopted as part of this opinion and order.

INITIAL DECISION

OF THE PRESIDING EXAMINER ON THE CERTIFICATE APPLICATION OF THE HOPE NATURAL GAS COMPANY

(Issued November 18, 1964)

I

NATURE OF THE CASE

Ellis, *Presiding Examiner:* As a step in the merger of two of the subsidiaries of the Consolidated Natural Gas System, one of the subsidiaries, the Hope Natural Gas Company, has asked for a certificate permitting it to acquire and operate the natural gas lines and facilities of the other, the New York State Natural Gas Corporation. When the merger is completed Hope will be given a new name, the "Consolidated Gas Supply Corporation",[1] and all operations of the two present companies will continue under that name, without change in program or rates. All of the customer distributors served by the two natural gas companies appear to support the merger or at least not to oppose it, but in Ohio, where another affiliate distributes a large share of the gas of both companies, the cities of Cleveland, Canton and Massillon have joined in opposition. The issues raised relate to whether the economies and other benefits will really ensue, whether they could not be achieved by other means, whether certain harm will result, and whether there is not a latent rate question which demands fuller treatment.

II

PROCEDURAL BACKGROUND

April 5, 1963: Application filed under Section 7(c) of the Natural Gas Act for a certificate authorizing Hope to acquire and operate the gas facilities of the New York State Natural Gas Corporation and to continue its sales in interstate commerce.

---

[1] Hence, herein, the surviving company is referred to as "Hope—Consolidated Gas".

May 1, 1963: Supplement filed to application, including a ruling from the Internal Revenue Service to the effect that no tax gain or loss will result from the merger.

June 12, 1964: Second supplement to application filed, including a favorable ruling from the Public Service Commission of West Virginia.

July 17, 1964: Public notice of application issued by FPC.[2]

September 24, 1964: Prehearing conference held, at which opposition was expressed by the cities of Cleveland, Massillon, and Canton, Ohio.

October 6, 1964: Public hearing begun and concluded. The Cities moved to dismiss the application.

October 22, 1964: Briefs filed by the FPC Staff and by the Ohio cities.

November 2, 1964: Reply briefs filed by the applicant and by one intervenor, the Texas Eastern Transmission Corporation.

The record is comparatively brief, consisting of 10 exhibits (which include the testimony prepared in advance), 388 pages of transcript and a few items incorporated by reference.

III

HOPE AND NEW YORK NATURAL TO MERGE

Both Hope and New York Natural are subsidiaries of the Consolidated Natural Gas Company, which is a registered public utility holding company serving a great part of the area of West Virginia, Ohio, Pennsylvania and New York. Consolidated is a house of many mansions, its other subsidiaries including the East Ohio Gas Company, which distributes through much of northeastern Ohio, the Peoples Natural Gas Company (distributing in the west Pennsylvania area), the River Gas Company, the Lake Shore Pipe Line Company and the Con-Gas Service Corporation.

Both Hope and New York Natural are very substantial concerns, each with revenues in the neighborhood of $100,000,000 per year, and they comprise a large segment of the Consolidated System, which is one of the major utilities subject to the jurisdiction of the Federal Power Commission and also—with respect to its holding company aspects—subject to the Securities and Exchange Commission.

Hope, while operating mostly in West Virginia, is a completely integrated natural gas company in that it produces natural gas; buys local production in the Appalachian area, transports natural gas in interstate commerce, purchases substantial supplies of gas in south Louisiana for transportation by others to its area, stores natural gas, and sells gas at retail in West Virginia and at wholesale at the Ohio and Pennsylvania borders. Three-fourths of its sales are to affiliated companies, predominately the East Ohio Gas Company which serves Cleveland and much of the Ohio area. Most all of the rest of its sales are to ultimate consumers in West Virginia; these, of course, are controlled by the West Virginia Commission. Hope both produces and purchases gas in Louisiana and has it transported to its Ohio River area markets by the Texas Eastern Transmission Corporation. Its total volume of sales has increased three times over the volume sold in 1940, the test year for the landmark rate case, *F.P.C.* v. *Hope Natural Gas Company* (1944), 320 U.S. 591.

---

[2] On the same day, the Commission also issued three orders of interest here:

1. Order Dismissing Rate Complaint against Hope filed by the City of Cleveland, Ohio, on July 9, 1963 in Docket No. RP64-3, 32 FPC 156;

2. Order Dismissing Rate Complaint against New York Natural filed by the City of Cleveland, Ohio, on December 4, 1963 in Docket No. RP64-14, 32 FPC 157; and

3. Order accepting the $1,006,000 annual rate reduction by New York Natural effective June 1, 1964 in Docket No. RP64-40, 32 FPC 198.

New York Natural is the other principal supply source in the Consolidated System. Its pipeline interconnects with Hope's at the border of West Virginia and Pennsylvania, continuing northward through Pennsylvania and New York State as far as Albany.

New York Natural has significant local production sources in western Pennsylvania and New York, also makes substantial purchases from pipelines leading from the Gulf area and maintains extensive underground gas storage facilities. Four-fifths of its business is with 16 nonaffiliated utilities in Pennsylvania and New York. The remainder of its business is the operation of its storage pools and other facilities to deliver gas to its affiliates, East Ohio and Peoples Natural Gas Company, the service to these companies being on a "cost of service" type of tariff. All of New York Natural's sales are in interstate commerce for resale and thus are subject to the jurisdiction of the Federal Power Commission. The two companies concerned in the merger are identical in ownership, since both are wholly owned by the Consolidated System, and their operations are remarkably similar and in about the same volume. The real difference is only one of geography—that is, Hope operates in West Virginia and a little in Virginia while New York Natural operates in Pennsylvania and New York State. There is no question of competition between them or of effect of the merger on competition.

Coincident with the merger of New York Natural (a New York corporation) with Hope Natural (a West Virginia corporation) the name of the latter is to become Consolidated Gas Supply Corporation, hence it is referred to herein as Hope-Consolidated Gas. The method of acquisition which has been agreed upon (Exhibit 2) is to retain the capital shares of Hope-Consolidated Gas in their present form and to convert all the capital shares of New York Natural into an equal number of shares of the new company, all, of course, to be owned by the Consolidated System. Surveillance of the merger itself is not the responsibility of the Federal Power Commission under the statute;[3] rather, it is subject to review by the state commission of West Virginia (whose order of approval is in the record) and by the Securities and Exchange Commission under the Public Utility Holding Company Act. The SEC approval is expected to be applied for and received shortly and the order herewith is conditioned upon that action.

After the merger, Hope-Consolidated Gas will make all sales and render all of the services presently being performed by New York Natural and by Hope.[4] The sales contracts and tariffs of Hope and New York Natural on file here will continue in effect after the merger under the new name of the surviving corporation, and the various obligations as well as rights of both companies under the Natural Gas Act will similarly continue. It is significant that no change whatever in actual physical operations is immediately in prospect, nor is there intended any substantive change in the rates and services. In other words, business will go on quite as usual; all that is involved is the change in the corporate structure to the end that Hope-Consolidated Gas will continue to carry on its present operations and all of those of the New York Company without change, all pursuant to the present tariffs but under the name of the Consolidated Gas Supply Corporation. In essence the change is a paper one only, with no immediate effect upon gas, pipelines or consumer dollars, and this explains the relatively narrow field of inquiry and the several limitations which were placed during the hearing upon the evidence sought to be adduced.

---

[3] *California v. F.P.C.* (1962), 369 U.S. 482, 489.

[4] The intercompany sale from Hope to New York Natural will perforce be discontinued, and this will require some adjustment as discussed below in Part VI.

IV

BENEFITS CLAIMED FROM THE MERGER

Averring that its ultimate savings in operating expenses will approximate $1,600,000 per year, with opportunity for further savings, the applicant classifies the beneficial purposes of the merger as follows:

(a) To simplify the corporate structure, substituting one management for two and eliminating duplication of administrative, accounting and operating personnel, also separate reports to governmental agencies and others. This means a more efficient utilization of personnel, facilities and equipment.

(b) To reduce regulatory expense by eliminating intercompany transactions, fewer filings of certificate applications and rate changes.

(c) To work improvements through unification of several technical departments, such as geological, engineering, storage, dispatching, and data processing.

(d) To seek more efficient procedures and organization for the purchase of additional supplies of gas (meaning, as explained at the hearing (2T244), the program for purchases in the Appalachian area).

(e) To get a better balancing of production and storage operations.

The program of reorganization has been carefully examined by the FPC Staff, whose conclusion it is that, "The consummation of the proposed merger will enable the surviving corporation to achieve significant costs savings which will ultimately redound to the benefit of the gas consumers." The annual costs savings in the neighborhood of one and a half million dollars result primarily from a reduction of seven or eight percent in the number of employees, or 175 positions. Their payroll expense (and the related cost of incidental benefits and employee headquarters) are now an important share of the cost of service of the two companies. Their reduction is an economic gain to the cost of service and must in the long run have its effect on the rates charged to the distributors and by them charged to the ultimate consumers, whose interest is, after all, the lodestar of this proceeding.

The indirect benefits of the unification may be eventually as great as the more obvious ones for which figures can be adduced. For example, the application includes an exhibit listing the outstanding certificates of the two companies, 17 pages for Hope Natural and 22 pages for New York Natural. Most of these evidently would be required whether it is two companies or one, but it is plain there is some room for reduction. One such elimination is obvious—the present sale by Hope to New York Natural in the amount of $14,000,000 per year, which is under a filed tariff.

By any measure, the personnel savings from the 175 positions eliminated must be regarded as significant; the annual cost reduction resulting, $1,720,000, is eight percent of the total cost of payroll and related benefits.

This is an obvious demonstration of the public convenience and necessity which is the statutory standard for the certificate requested, since these costs are a part of the cost of service which in the long run determines the rates.

But the elimination of the 175 positions is quite the opposite of public convenience so far as the 175 incumbents are concerned. To ameliorate that problem, the company has made a number of provisions, such as an early retirement with an extra contribution from the company to make it unnecessary to discount the amount of the pension payable. For others a severance pay allowance is provided, while for the personnel who move from Pittsburgh to West Virginia, where the entire company will be located, some provision will be made for a relocation allowance to assist in their expenses.

Quite apart from the concrete proof of savings through abolition of positions, there is ample authority for the view that simplification and streamlining of the corporate organization by itself is a good thing and "in and of itself sufficient justification for the realignment", quoting from the case of *The Ohio Fuel Gas Company*, 29 FPC 1134, 1140 (1963). This is the policy of the law generally, as expressed, for example, in the Reorganization Act of 1945.[5] It is the policy of the Congress with reference to utilities, as expressed in the Public Utility Holding Company Act;[6] and, specifically, it will lead the way toward greater flexibility, efficiency and economy in the procurement of gas produced in the area, its transmission, storage and sale (Exhibit 7, page 8). All of these, together with the savings noted, are elements in the complex of "public convenience and necessity" which Section 7 of the Natural Gas Act spells out as the guide to the issue of the certificate here requested.

V.

THE CITIES' OPPOSITION TO MERGER

It is significant that the nonaffiliated distributor customers of the Consolidated System do not oppose the merger and, in fact, most of them seem to support and recommend it. The largest distributor customer of the system is the East Ohio Gas Company, serving Cleveland and other areas in the northern and eastern part of Ohio. East Ohio is an affiliated company, also fully owned by the Consolidated System, and of course was not separately represented. Instead, there intervened and appeared at the hearing solicitors for the City of Cleveland, and joining with them on the brief are the City of Canton and the City of Massillon. Representing, in effect, the ultimate consumers, they join in roundly opposing the merger in its entirety with a further special objection to the storage pricing procedure, which is set out below.

Turning first to the cost benefit claimed—that is, the million and a half dollar reduction in the annual cost of service, mostly through reduction in the number of personnel employed—the cities' attack is entirely too much on a shotgun approach, with three shots aimed in widely diverging directions, *viz.:*

(a) The savings, even if made, are inconsequential when related to the total cost of service.

(b) The savings will not really take place at all, or at least not much of them.

(c) The same savings could be accomplished in other ways, without the merger (T87).

As to (a), the fact that the savings are a very small percentage of the total costs does not make a million and more dollars a year inconsequential. It is enough, to test the claim here made, to suppose or hypothesize, for the moment, an increase in costs instead of a decrease, that is, some doubtful or controversial increase of a million dollars in the annual costs, instead of a savings. In that event, the cities would hardly be expected to be satisfied with a reply from the company to the effect that such an increase is inconsequential and should be disregarded. Anyway, while it appears to be but one percent of the combined gross income, it is perhaps more meaningful that the savings amount to 4.8 percent of the "operating expenses" of the two companies combined.[7]

---

[5] 59 Stat. 613, Section 2(a).

[6] *Phillips* v. *S.E.C.* (CADC-1950), 185 F. 2d 746, 749.

[7] Compare Item A by reference, Volume II, Exhibit L (xii), item 6(b), page S-11, with Exhibit 3, Schedule 1, line 5, column 18.

As to (b), there is simply no evidence to support the doubts originally expressed as to whether in truth the savings will ever take place at all, since they are amply demonstrated in the company's exhibits which stand unrefuted. In fact, most of the positions being abolished are already vacant (the company's application before the West Virginia Commission having been filed over a year and a half ago), or are filled by temporary employees. Anyway, while this point was made at the prehearing conference, the cities' brief now seems only to demur on this fact in evidence, not to controvert it.

As to (c), the cities reiterate that no corporate merger is necessary, for the companies could perfectly well reorganize by combining all their functional divisions, relocate the personnel, and thus achieve the same personnel savings, while still retaining the separate corporations. They point to quite a number of functions and operations which already are being performed for the entire Consolidated System by a service subsidiary organized some time ago. These functions include overall planning and research, pipeline procurement of gas supply, also dispatching and billing. This proves that corporate merger is not necessarily the only way to achieve personnel savings through combination of like functions.

But it is obvious that many separate functions remain and are duplicated in the two companies, one located at Pittsburgh and the other at Clarksburg, West Virginia. Especially this refers to the function of procurement of Appalachian-produced gas, which involves a great deal of expense of geological survey because of the changing character of the gas development in that region. The important thing here is that it is the management's conclusion that the effective way to eliminate the duplicating functions and the unnecessary personnel is to bring them together in one headquarters under one corporation and under undivided superintendence. Such a decision is a management responsibility, not a regulatory one.

The essence of the reorganization which FPC is called upon to approve is the transfer of the properties and the sales programs from the New York Company to Hope-Consolidated Gas. The Commission's test, under the statute cited, is whether the proposed program "is or will be required by the present or future public convenience and necessity." Upon the proof that merger will significantly lower the cost of service, a basic element of public convenience and necessity is made out. It is simply no answer at all to assert that perhaps, by a different reorganization, the savings might possibly or probably be accomplished without merger. The fact is that merger is the company-selected method of achieving the essential and desirable end. Unless some ulterior and malign result can be foreseen to come from the merger as planned, it is evident that FPC's responsibility is complete and accomplished upon the finding that the savings aimed at will embody the "public convenience and necessity" the law demands, and that corporate merger is a reasonable, efficacious, and rational way to accomplish those savings. No greater surveillance or control is required of the regulatory process, or should be.

In other words, the corporate merger procedure as selected by the management is adjudged to be a lawful method of achieving the result of economical operation, which the law demands in the name of public convenience and necessity; secondly, it is a method which is seen to give every promise of being effective. Accordingly, unless it can be shown to be otherwise undesirable or against the public interest, certification is called for, indeed required, of the Federal Power Commission by the Natural Gas Act.[8]

---

[8] Compare the following language of the Third Circuit on a similar question arising under the Public Utility Holding Company Act: "It will thus be seen that the Congressional purpose is to leave open to the holding companies a broad area of discretion in

Upon the question whether the merger procedure does have some undesirable or unfavorable side effect to countervail the advantage referred to, the Cities do make some effort to claim that consolidation of the corporations will lead to obscuration, confusion and uncertainty as to costs, revenues and rates. They point to the two companies' quite different rate forms and structures, and to the disparate capital structure. The effort is not at all convincing, especially since the program calls for no revision of the rates generally. Instead, Hope-Consolidated Gas will continue in force the present Hope tariffs, and will adopt in toto New York's. What is more, the company offered at the hearing—and it is regarded as stipulated and agreed to—to continue to keep separate cost accounts so that the separate rates can be individually tested, just as they were in July of this year, when the FPC issued its rate orders approving Hope's tariff and requiring a rate reduction for New York Natural (*supra*, p. 160).[9]

Beyond this, it is not at all appropriate now to speculate on possible rate changes hereafter—it is just not true what the Cities say in their brief that "Now is the time to air the rate impacts of the merger—not after it is too late, when the companies are merged." The opinions of the Commission and of the Court of Appeals in *El Paso*[10] are ample authority for keeping general rate problems out of certificate cases, at least to the extent that the particular question is untimely, is unaffected by the specific action being certificated, and is therefore irrelevant. Even without such authority, the answer is plain that the time to air rate impacts is when rate changes are filed or rate complaints received, all as provided in Sections 4 and 5 of the Natural Gas Act. This case is under Section 7, and the short answer is that no rate impact is now proposed or is to be expected.

Upon the bases stated, it is concluded that the public convenience and necessity of the proposed acquisition and sales are established by the specific savings affirmatively demonstrated, by the corporate simplification, and by the prospect of further economies through efficiency in operation, that no harm or disadvantage in other respects has been shown to be in prospect from the merger, and that, accordingly, the company's affirmative case is established and the certificate should issue. It follows that the motion to dismiss for lack of evidence, as stated by the Cities on the record, should be and is denied.

One final point. The Cities seem to feel it is required that the company announce its eventual and comprehensive plans for its total transmission and distribution functions as a requisite to the evaluation of this specific merger proposal, and they want these plans to be announced and discussed even before they have been formulated and decided upon. But the present merger makes no changes in gas operations, transmission or distribution functions, and it is

---

determining just how they are to bring their systems into compliance with the required standards.

* * * * * * *

It is obvious that in many cases the desired results may be reached in more than one way. Congress evidently intended to permit the Commission to leave to the company involved the initiative in suggesting from among the available alternative methods that one which it deems most appropriate. *Commonwealth and Southern Corporation* v. *S.E.C.* (1942), 134 F. 2d 747, 751.

[9] From the Transcript at 2T324:

The attorney for the applicants: ". . . the books are going to be kept with sufficient sub-accounts, that the costs by zones, by areas of operation of Hope and New York Natural, the former areas, and present rate zones, will be kept in such a manner, these costs can be determined."

From page 325: "PRESIDING EXAMINER: But you are planning to keep your books in such a way that you can, when required, make a cost allocation study on the same zone method that is now in use?" To this, the applicant's financial witness responded, "Yes, sir."

[10] *Pacific Northwest* (1959) 22 FPC 1091; affirmed, *California* v. *F.P.C.* (CADC–1961), 296 F. 2d 348; reversed on other grounds (1962) 369 U.S. 482.

time enough to evaluate any such changes after they have been planned and proposed, certainly not before they are even conceived.[11]

VI

THE NEW YORK NATURAL STORAGE SALES RATE

In the company's program of continuing the present sales of Hope and New York Natural at the same rates, one difficulty arises which calls for special treatment, not entirely separable from rates. The point is that one of New York Natural's tariff rates, the one for its sale out of storage to the two affiliates (East Ohio and Peoples) is of a cost of service type, rather than a straight or block-type rate. This would cause no problem except that 10 or 15 percent of New York's storage gas is now bought from its affiliate, Hope. When Hope-Consolidated takes over, the Hope-New York Natural sale obviously ceases, they now being one company.

The problem is how to continue to reflect in the New York Natural cost of service tariff the cost element comprising the price now paid per Mcf by New York to Hope. In New York's tariff, one of the several elements that are listed to make up its "cost of service" to be collected from East Ohio and Peoples is one for the "cost of gas." Manifestly, if the Hope supply continues as planned to flow into the present New York Natural storage pools (along with the rest of New York's purchases), that portion of the total inventory would not, on the record, bear its cost since the price now being paid for it will cease to be paid. Unless some rearrangement is made, this will be a windfall to East Ohio and evidently to Peoples also—that is, without some formula designed to record a cost for that gas that will equal the price now paid by New York to Hope, or some other proper rate for that portion of New York's storage supply.

A related difficulty is that Hope also operates storage pools and, under the normal procedure, after merger both companies' sets of pools would be expected to be "rolled together" for averaging an over-all cost. This would produce certain dislocations and be quite inconsonant with the program to maintain, for the present, exactly the current services, rates and charges. (As noted on page 160, both sets of rates were reviewed by FPC in the past year and approved by orders of July 17, 1964, after a million-dollar rate reduction by New York Natural.)

To meet the problem, the applicant devised and submitted a program, but they were requested by the Staff to submit it for separate approval. Exhibit Q to the application called to attention that this proposal is being submitted under a separate request for Commission approval, hence the problem was not part of this case at the time it came on for hearing and it is not mentioned in the discussion which appears in the notice of application of July 17, 1964. In fact, nothing was even heard about it at the prehearing conference.

At the final one-day hearing the proposed procedure was explained, and at this stage objections were first stated, the Cities then claiming their right to be heard and to cross-examine the bases for the program which had been devised. To obviate any question on this score, the applicant moved to amend the application to include its request for approval of the plan, which was allowed. 2T359, 377.

---

[11] When there came before the First Circuit the SEC's order to dissolve two subsidiaries of Ebasco which unduly complicated the system, the court understood this step was only a part of the entire program and of an eventual larger proceeding to deal with the entire system, but the court felt it not necessary at that time and place to size up the whole situation, nor to consider what may be in mind with respect to the numerous other problems of organization to come up later on. *American Power and Light Company* v. *S.E.C.* (CA1–1944), 141 F. 2d 606, 620.

The program referred to, as set out in the company's separate letter of June 12, 1964 (not in this docket but now Item E in this record), is in two steps:

(A) To price separately the cost of gas stored in the former Hope and New York Natural storage pools in the same manner as Hope and New York Natural are now pricing these costs;

(B) However, in calculating the weighted average cost of all gas acquired for the former New York Natural system operations *and* actually injected into their storages, to include the volumes and dollar costs of the gas purchased by Hope-Consolidated Gas in Louisiana. This pricing to be in lieu of that for the gas now purchased by New York Natural from Hope, since that sale will cease.

There is no particular reason to object to step (A), since separate costing and pricing of the two sets of pools may be permitted under the regulations. It is today's method as followed by the separate companies, and its continuance is quite consonant with the company's program to continue the same sales and rates and to maintain separate cost subaccounts. Hence this step is approved.

But step (B)—assigning to Hope's gas its Louisiana cost figures—is another matter. Re-emphasizing time and again that the sole purpose is to maintain the present level of costs and prices, the company "ran a test" of this program against the actual volumes sold by New York Natural in 1963 and those projected for 1965. The result is to lower them by just $3,000 per year, or .023 of one percent, which of course is substantially the same.

If it were true that Hope's present share of New York Natural storage gas were entirely from Louisiana production, then the effect of step (B) would be to continue exactly the present situation. There is no such evidence; in fact, no one at the hearing seemed to know (2T354–358), nor is there any other evidence that the Louisiana formula, step (B), truly and fairly reflects the cost of Hope's share of New York Natural's storage gas procurement—except, that is, the test run referred to which shows that, for two certain years, by coincidence or otherwise, the new formula works out about right. What is lacking is some analysis to show that the Hope gas—which actually comes from many sources—is truly and fairly priced by assigning to it the price which Hope pays to its Louisiana sources. This hiatus is not a lack in the company's preparation, which is most carefully and adequately done, but rather it is due to the procedural difficulty that the company was required to omit this matter from its application as filed in this docket.

Without further examining the merits of formula (B), it is hard to deny the Cities' real point that the proposal amounts to a change in rate and it must be filed and dealt with as such if their procedural rights are to be preserved. To test the point, it is necessary only to refer to the present New York tariff for its storage (item C by reference). By this document, at page 14, the two affiliated customers are required to pay a sum of money referred to as "cost of service", which is defined as all charges under the heading (i) cost of gas, (ii) cost of storage, (iii) cost of transmission, and (iv) cost of inbound handling. The critical element, "cost of gas", is defined on the next page as the number of Mcf delivered from storage "multiplied by the weighted average cost per Mcf of Seller's inventory in both Storage Properties . . .".

What formula (B) proposes is to interpret the words "weighted average cost per Mcf of Seller's inventory in both storage properties" *not* for what they plainly say—the average cost of the actual storage inventory—but instead, for Hope's part of that inventory, to substitute the cost of the company's purchases in Louisiana and to presume, whether rationally or arbitrarily, that this cost will be about the same as the true average cost of the true storage inventory (meaning, of course, the Hope share of it).[12] It is not at all understood how this revision of the plain words of the tariff can be described as mere bookkeeping, especially in view of the testimony that without this revised interpretation the rate under this tariff or the actual resulting cost will necessarily go down about seven or eight hundred thousand dollars per year. The point is that when Hope-Consolidated adopts this tariff the term "cost of service" will mean Hope-Consolidated's costs, not New York Natural's; and unless there is this revision or reinterpretation or new application of the definition, the words used will result in an unwarranted reduction in the amount referred to. But when there is a change in the interpretation and application of a tariff, there is inevitably a change in rate in the legal sense, unless such words have quite lost their meaning. As in the case of statutes, a new construction and application of the words of the tariff can be effective to alter its plain meaning quite as much as if it were a verbal amendment.

It is just for this reason that Section 4 of the Natural Gas Act, setting out the procedure for rate changes, their filing, public notice, complaint, hearing and decision, refers also to "practices, and regulations affecting such rates and charges", which are not to be changed without a new filing, public notice, possible suspension and hearing, and all subject to the Commission's order thereon.

This is not to suggest that formula (B) is necessarily wrong or unjustified—it is an obviously, indeed admittedly, pragmatic adjustment, open to change in the next rate case, and perhaps the best that can be devised under the circumstances. But all of this does suggest that this new and different application of the words of the tariff is the very equivalent of a revision of its actual words; and, in fairness, the procedure should be that which the law provides for a change in the rate or tariff. No reason appears why the substance of formula (A) and (B) should not presently be filed as a rate change, to be followed by the regular procedures set out in Section 4 of the Natural Gas Act. Accordingly, the condition hereto attached so provides.

VII

FINDINGS AND ORDER

Upon consideration of the entire record it is found and concluded that—

(1) Hope Natural Gas Company, a West Virginia corporation with its principal place of business in Clarksburg, West Virginia, (which is to be renamed Consolidated Gas Supply Corporation) is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) New York State Natural Gas Corporation, a New York corporation with its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities of New York State Natural Gas Corporation, as more fully described in the application and the evidence herein, are proposed to be acquired by merger and operated by Hope-Consolidated Gas for the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition and operation of these facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sales of natural gas made from and other services rendered by the facilities to be acquired from New York Natural will be in interstate commerce, subject to the jurisdiction of the Commission and the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

---

[12] The Staff brief reemphasizes the need to incorporate some proper charging provision for Hope's share of the New York storage gas and, in view of the test run made, is willing to accept this Louisiana formula but only with the *proviso* that it does not prejudice the treatment of these costs in any future rate case.

(5) Subject to the requirements of this order and the conditions of the certificates issued hereunder, Hope-Consolidated Gas is able and willing properly to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act, and to the requirements, rules and regulations of the Commission thereunder.

(6) The acquisition and continued operation of the facilities proposed to be acquired by Hope-Consolidated Gas from New York Natural, and the sales of natural gas and other services proposed are subject to the jurisdiction of the Commission and required by the public convenience and necessity, and a certificate therefor should issue as hereinafter ordered and conditioned.

ACCORDINGLY, *It is Ordered*, subject to review by the Commission, that

(A) A certificate of public convenience and necessity is hereby issued, upon the terms and conditions of this order and subject to all provisions of the Natural Gas Act and the Commission's Regulations thereunder, authorizing Hope-Consolidated Gas to acquire and operate, under the name of Consolidated Gas Supply Corporation, all of the natural gas facilities of New York Natural subject to the jurisdiction of the Commission, as more fully described in Hope's application in Docket No. CP63-272.

(B) The name of Consolidated Gas Supply Corporation be and the same is hereby substituted, effective as of the date of consummation of the merger of New York State Natural Gas Corporation into Hope Natural Gas Company, for that of Hope and of New York Natural in all certificate and other authorizations heretofore issued pursuant to the Natural Gas Act by this Commission to the respective companies.

(C) The certificates issued by paragraphs (A) and (B) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (d)(1), (d)(2) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act.

(D) Substantially concurrently with the consummation of the merger contemplated by this order, Consolidated Gas Supply Corporation shall file with the Commission, in accordance with its Regulations under the Natural Gas Act, the following:

(i) Notice of Cancellation of Hope's service agreement with New York Natural in accordance with the form set forth in Schedule 1 of Exhibit 6.

(ii) Certificate of Adoption of New York Natural's FPC Gas Tariff, Third Revised Volume No. 1, together with service agreements thereunder currently in effect, and its FPC Gas Tariff, Original Volume No. 2, together with the contracts embodied therein as special rate schedules, in accordance with the form set forth in Schedule 2 of Exhibit 6, and

(iii) Notice of Change of Name pertaining to Hope's FPC Gas Tariff, First Revised Volumes Nos. 1 and 2, and its related service agreements and contracts on file with the Commission, in accordance with the form set forth in Schedule 3 of Exhibit 6.

(E) Within 90 days following the filings referred to in Paragraph (D) above, Consolidated Gas Supply Corporation shall file with the Commission a tariff with the sheets bearing the correct name of that company to replace the tariff of Hope continued in effect and the tariff of New York Natural previously adopted. This tariff will take the form of three volumes, as follows:

(i) *Original Volume No. 1*—will embody the rate schedules now contained in First Revised Volume No. 1 of Hope's FPC Gas Tariff and Third Revised Volume No. 1 of New York Natural's FPC Gas Tariff with appropriate company name and other formal changes, including redesignations of the rate schedules to reflect the continuation of Hope's rate zones 1 and 2 with the same designations and the continuation of New York Natural's rate zones 1 through 4 redesignated as zones 3 through 6.

(ii) *Original Volume No. 2*—will embody the special rate schedules now contained in Original Volume No. 2 of New York Natural's FPC Gas Tariff with the appropriate company name and other formal changes.

(iii) *Original Volume No. 3*—will embody the special rate schedules now included in Original Volume No. 2 of Hope's FPC Gas Tariff with appropriate company name and other formal changes.

(F) As a part of its new tariff volume Number 2, Hope-Consolidated Gas shall file, under and pursuant to Section 4 of the Natural Gas Act and the regulations thereunder, a sheet or sheets setting forth its program for storage accounting and pricing under the former New York State Natural OSS tariff, designed to be effective upon consummation of the merger herein referred to.

(G) The certificate is issued upon the further condition that the applicant herein first obtain the necessary approval from the Securities and Exchange Commission.

WILLIAM L. ELLIS
Presiding Examiner

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC UTILITY DISTRICT NO. 1 OF DOUGLAS COUNTY, WASHINGTON, PROJECT NO. 2149

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING INITIAL AUTHORIZED INSTALLED CAPACITY AND ANNUAL CHARGES

(Issued February 2, 1965)

On January 27, 1965, Public Utility District No. 1 of Douglas County, Washington (Applicant) filed application for Commission approval of revised Exhibits L and M for its Wells Project No. 2149 located on the Columbia River, Washington.

The license for Project No. 2149 provides for the installation of seven generating units initially and three additional units ultimately. Public notice of application in Project No. 2149 for ten generating units (seven initially with provision for three additional units ultimately) was issued May 26, 1961 (26 F.R. 5024). Plans for the initial installed capacity of seven generating units having a total capacity of 541,975 kw have been approved. These revised plans include the three additional units of 77,425 kw capacity each. The revised exhibits show the initial installation of the project to be the ultimate ten generating units of 77,425 kw capacity each, totalling 774,250 kw. The initial installation of the ten-unit ultimate capacity is not an alteration requiring further public notice.

Applicant advises that if it can exercise by February 15, 1965, its options to include the three generating units in its existing contracts for the manufacture and installation of the initial seven units, the cost to Applicant of the three units is estimated to be $18,600,000 which would be financed by the issuance of additional electric revenue bonds supported by existing contracts for the purchase of project power by investor-owned utilities in the area. Amendments of such existing contracts have been negotiated to provide for the purchase of the output of the three additional units, to become effective upon completion of suitable financing of the three additional units. Savings to Applicant by making the initial installation the ultimate capacity of ten units will approximate $7,000,000.

According to the application, benefits from the first increment of Canadian Storage will be available starting April 1, 1968, with total benefits therefrom by April 1, 1973. Completion of the ultimate ten-unit capacity of Project No. 2149 before July 1968, as requested in the application, will allow Applicant to utilize the improved stream flow from Canadian Storage Projects when it becomes available, as required by Article 38 of the project license.

Estimates supplied by Applicant, adjusted by our staff to eliminate the cost of transmission facilities and bond fund requirements, yield comparable at-site capital costs of $161,960,000 for the initial installation of seven units; $185,790,000 for the initial installation of seven units to be followed by the installation of the three future units in time to go into full commercial operation in 1973; and $177,920,000 for the initial installation of the ultimate ten units. The savings in capital costs by initial instead of future installation of three additional units is thus estimated by our staff to be $7,870,000. Initial installation of the three units would require additional at-site capital costs of $15,960,000 and would result in an annual net benefit, after allowances for Canadian storage, of $1,990,000 if all project output is salable when the three units are completed in 1968, as contemplated in the subject application. Completion of the initial installation of the ten-unit ultimate capacity of the project by July 1968 would fall well within the scheduled completion date, fixed in the Commission's order issued August 16, 1963, as September 1, 1970.

While we are herein approving revised Exhibit L, designated as Exhibit L–2, which supersedes the sheets of like-numbered Exhibit L–1, now parts of the license and which should be eliminated from the license sheet 1A of Exhibit L–1, now part of the license, though superseded in substance, should not be removed from the license because it has been approved by the Chief of Engineers, Department of the Army. Its removal from the license will be effected when its superseding sheet has been approved by the Chief of Engineers, pursuant to Section 4(e) of the Federal Power Act.

The initial installation of ten instead of seven generating units will increase the installed capacity of the project from 541,975 kw to 774,250 kw with a resultant increase in the annual charges under the license. Accordingly, the license should be modified to show the new authorized installed capacity for annual charge purposes as 1,032,000 horsepower.

The Commission finds:

(1) The following described Exhibit L drawings, and revised Exhibit M (Revised January 25, 1965) entitled "General Description of Equipment", except insofar as it relates to the design of fish handling facilities, conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit L–2	F.P.C. No.	Title: Wells Hydroelectric Project—Columbia River Hydro-Combine
Sheet 1A	2149–96	General layout.
Sheet 9A	2149–97	Sectional plans.
Sheet 9B	2149–98	Sectional plans.
Sheet 9C	2149–99	Sectional plans.
Sheet 10A	2149–100	Sectional plans.
Sheet 10B	2149–101	Sectional plans.
Sheet 11A	2149–102	Sectional plans.
Sheet 12A	2149–103	Sectional plans.

(2) Exhibit L-1, Sheets 4A, 4B, 9A, 9B, 9C, 10A, 10B, 11A, 12A, 13A, 13B and 13C (FPC Nos. 2149-67, -86, -72, -88, -93, -73, -89, -74, -75, -76, -90 and -94 respectively) and Exhibit M (Revised July, 1963), now parts of the license, will be superseded, and eliminated from the license for the project.

(3) The presently authorized installed capacity of the project for the purpose of computing the capacity component of the administrative annual charge is by this order increased from 723,000 horsepower to 1,032,000 horsepower, and the amount of annual charges, based on such increased capacity, to be paid under the license for the project for the costs of administration of Part I of the Act is reasonable.

The Commission orders:

(A) The revised Exhibit L drawings and Exhibit M, except insofar as the latter relates to the design of the fish handling facilities, described in finding (1) above are hereby approved as part of the license for the project, and the Exhibit L drawings and Exhibit M, described in finding (2) above, are hereby eliminated from the license for the project.

(B) Article 46(i) of the license for the project is hereby further amended, effective as of January 1, 1965, to show 1,032,000 horsepower as the authorized installed capacity of the project for annual charge purposes.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ST. MICHAELS UTILITIES COMMISSION, AND COMMISSIONERS OF ST. MICHAELS, MARYLAND v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, E-7114; STOCKTON LIGHT AND POWER COMPANY (OF MARYLAND), AND STOCKTON LIGHT AND POWER COMPANY (OF VIRGINIA) v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, E-7117; DELAWARE POWER & LIGHT COMPANY, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF VIRGINIA, E-7137; CITY OF DOVER, DELAWARE v. DELAWARE POWER & LIGHT COMPANY, E-7175

ORDER DENYING MOTION TO SEVER

(Issued February 3, 1965)

The St. Michaels Utilities Commission, the Commissioners of St. Michaels, Maryland, and the City of Dover, Delaware, on January 15, 1965, filed a motion in the above-consolidated proceedings requesting severance of issues other than one relating to alleged unlawful rate discrimination by Delaware Power and Light Company and its subsidiaries against St. Michaels and Dover and in favor of certain electric cooperative corporations, namely Choptank Electric Cooperative, Inc. and Delaware Electric Cooperative, Inc. On January 22, 1965, an answer was filed by Delaware Power and Light Company. On January 25, 1965, an answer was filed by Stockton Light and Power Company supporting and joining in the motion of St. Michaels and Dover.

The moving parties contend that the public interest requires that the unlawful rate discrimination issue should be before the Commission for decision simultaneously with the discrimination issue raised in *Southwestern Public Service Company*, Docket No. E-7038. They further ask that the presiding examiner be directed to conclude the hearing on the discrimination issue at the hearing session commencing February 8, 1965, and suggest that the intermediate decision procedure be omitted.

In our opinion, questions of discrimination largely depend on the factual situation in each individual case as shown by the whole record. Of importance in this connection would be the portions of the record relating to cost of service. Therefore it would not assist in reaching a determination in this case (or in *Southwestern*) to separate the discrimination issue here and consider it with another proceeding where the circumstances are very different. Furthermore, what movants suggest would mean delaying the decision in *Southwestern* even if we omitted the intermediate decision procedure in this proceeding, for we would be obliged to grant time for adequate briefing.

The Commission orders:

The motion to sever made by the St. Michaels Utilities Commission and Commissioners of St. Michaels, Maryland, and the City of Dover, Delaware, and joined in by Stockton Light and Power Company, is hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G-9666

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 4, 1965)

On November 13, 1964, Colorado Interstate Gas Company (Applicant) filed in Docket No. G-9666 an application pursuant to Section 7(c) of the Natural Gas Act to amend the order of the Commission issuing a certificate in said docket by authorizing permanent deliveries of natural gas to Northern Gas Company (Northern) in lieu of emergency deliveries heretofore authorized, all as more fully set forth in the application.

The Commission has heretofore authorized the construction and operation of facilities and the sale of natural gas on an emergency basis to Northern at Laramie, Wyoming, under Applicant's Rate Schedule E-1. Northern now desires gas deliveries of up to 200 Mcf per day on a permanent basis under Applicant's Rate Schedule G-1 and interruptible deliveries under Rate Schedule IS-2 for resale and distribution in the City of Laramie and environs. Applicant will use the same meter station and lateral line heretofore authorized for the emergency deliveries.

Applicant estimates that annual firm and interruptible sales of gas to Northern will be 73,000 Mcf and 227,000 Mcf, respectively.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issuing a certificate to Applicant in Docket No. G–9666 should be amended by authorizing permanent in lieu of emergency deliveries of natural gas to Northern Gas Company as hereinafter ordered and conditioned.

The Commission orders:

(A) The order issuing a certificate of public convenience and necessity in Docket No. G–9666 be and the same is hereby amended by authorizing Applicant to sell and deliver natural gas to Northern Gas Company on a permanent in lieu of an emergency basis pursuant to Applicant's Rate Schedules G–1 and IS–2, as hereinbefore described and as more fully described in the application to amend; and in all other respects said order shall remain in full force and effect.

(B) The sale and delivery of natural gas pursuant to Rate Schedule G–1 shall not exceed 200 Mcf per day at 14.73 psia.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITY OF COLTON, CALIFORNIA v. SOUTHERN CALIFORNIA EDISON COMPANY, DOCKET NO. E–6821; SOUTHERN CALIFORNIA EDISON COMPANY, DOCKET NO. E–7019

ORDER PROVIDING FOR APPROVAL OF RATE SETTLEMENT AND ACCEPTING RATE SCHEDULES FOR FILING

(Issued February 4, 1965)

This order, by accepting as consistent with public interest a proposed plan of settlement submitted by the parties on December 14, 1964, brings to a conclusion a long pending complaint proceeding involving the Commission's jurisdiction over the rates charged by the Southern California Edison Company (Edison) to the City of Colton, California. Under the plan which we are approving, Edison proposes a refund of $185,000 to Colton in settlement of all claims between the Company and the City and is submitting schedules reducing the Company's rates and charges to Colton to the level of the Company's interstate wholesale rates and charges for service to other municipally owned and investor owned resale customers. In our opinion, acceptance of the proposed plan of settlement described hereafter is in the public interest.

As indicated above the settlement agreement provides for settlement of all claims arising out of rates for electric service for which payment was made by Colton on or before July 31, 1964. They include (1) all refunds claimed by the City of Colton for the period July 1, 1954, to October 1, 1961, arising out of Edison's special reserve fund established pursuant to Commission Opinion No. 346 (26 FPC 223), as amended by Commission order issued September 14, 1961 (26 FPC 492), and (2) all claims for refund of monies paid or for payment of monies due arising out of Edison's billing to the City of Colton under Rate Schedule FPC No. 2. That Schedule was filed by Edison on December 1, 1961 and became effective, subject to refund, on June 1, 1962, pursuant to Commission order issued December 28, 1961, Docket No. E–7019.

In further accordance with the settlement agreement Edison submits for filing, pursuant to Section 205 of the Power Act, the Company's rate schedules "R" and "R–1", designated for this Commission's purposes as Edison's Rate Schedules

FPC Nos. 26 and 27, respectively.[1] Edison requests that rate schedules "R"[2] be made effective for its wholesale electric service to Colton for the period June 1, 1962, through January 26, 1964 and rate schedule "R-1"[3] be made effective commencing January 27, 1964, the date on which the latter schedule became effective on Edison's system.

In addition the settlement agreement provides: (1) recognition that Colton may elect to take service at Edison's lower "R-2" rate upon compliance with the terms of service; (2) recognition that Colton may elect to apply to this Commission for service at the "R-2" or other appropriate rate without regard to Edison's service condition of a 10-year contract term; (3) agreement by both parties to request the Commission's permission for disposal of the special reserve created pursuant to Commission Opinion No. 346 by crediting to Account 216, Unappropriated Earned Surplus, all amounts now in that special reserve and for waiver of the requirements of this Commission's Regulations to the extent necessary to effectuate all provisions of the settlement agreement; and (4) agreement by Edison to file a request for dismissal of proceedings currently pending in the United States Court of Appeals for the Ninth Circuit and in Superior Court of the State of California for the County of San Bernardino[4] subsequent to this Commission's acceptance for filing of the aforementioned "R" and "R-1" rate schedules and approval of the parties' plan for disposition of the special reserve in Docket No. E-6821. There will be a pro forma adjustment for amounts paid by Colton after July, 31, 1964, to the date of approval by the Commission of the proposed settlement.

While Edison has provided wholesale power service to Colton since at least 1954, prior to the commencement of this proceeding, it had not filed its rates for such sales with this Commission. In Opinion No. 346, the Commission found that Edison's wholesale sales for resale to the City of Colton have been subject to its jurisdiction under the Federal Power Act at least since July 1, 1954. Accordingly, the Commission there ordered Edison to file the rate contained in its contract for service to Colton as of that date. That contract dated October 1, 1945, is embodied in Edison's Rate Schedule FPC No. 1.

Additionally, the Commission, as a part of its Opinion No. 346 and Order, required Edison to establish a special reserve for all amounts, together with interest thereon at 6 percent per annum, collected from Colton in excess of those that would have been collected by Edison under the 1945 contract rate. Subsequently, Edison and the California Public Utilities Commission filed a joint petition for review of the Commission's order in the United States Court of Appeals for the Ninth Circuit which set aside the Commission order (310 F. 2d 784). On certiorari the United States Supreme Court reversed the Court of Appeals for the Ninth Circuit, holding that Edison's sales for resale to Colton were interstate wholesale sales subject to the jurisdiction of this Commission under the Federal Power Act. *F.P.C.* v. *Southern California Edison Company,* 376 U.S. 205. That proceeding is presently before the Court of Appeals for the Ninth Circuit upon remand from the Supreme Court.[5]

---

[1] Edison's proffered Rate Schedule FPC No. 26 supersedes its currently effective Rate Schedule FPC No. 2, and in turn is superseded by Edison's proffered Rate Schedule FPC No. 27.

[2] Edison's proffered schedule "R" rate provides for a demand charge at each meter of $200 for the first 200 kw or less, $.95 per kw for the next 4,800 kw, $.75 per kw for the next 5,000 kw, and $.65 for all additional kw. The energy charge is .93¢ per kwh for the first 150 kwh per kw of billing demand; and .83¢ per kwh for the next 150 kwh per kw of billing demand, and .62¢ for all additional kwh.

[3] Edison's proffered schedule "R-1" rate contains a demand charge at each meter of $458.75 for the first 500 kw or less, $.85 per kw for the next 1500 kw, $.75 per kw for the next 8,000 kw, $.60 per kw for the next 40,000 kw, and $.55 per kw for all additional kw. The energy charge for the first 150 kwh per kw of billing demand is 1.9¢ per kwh for the first 15,000 kwh and 1.0¢ per kwh for the remaining kwh; .8¢ per kwh for the next 150 kwh per kw of billing demand, and .6¢ per kwh for all additional kwh.

[4] Edison delivered a "Notice of Rescission" of the 1945 contract, dated August 28, 1961, to Colton, and filed a "Complaint for Rescission and Restitution, for Declaratory Relief, and for Reformation", dated August 28, 1961, in the Superior Court of California, County of San Bernardino, Case No. 107169, *Southern California Edison Co.* v. *City of Colton.*

Following our assertion of regulatory jurisdiction, Edison as heretofore indicated, on December 1, 1961, proposed substantially increased rates for service to Colton. By order of hearing and suspension issued December 28, 1961, we directed a hearing as to the lawfulness of Edison's rates and charges to Colton, Docket No. E-7019. To date, no hearings have been held in the rate suspension proceeding, Docket No. E-7019. Following the end of the five month maximum suspension period, Edison's increased rates to Colton (Rate Schedule FPC No. 2 superseding the 1945 rate designated as Rate Schedule FPC No. 1) became effective June 1, 1962. Colton paid the Rate Schedule FPC No. 2 rate from June 1, 1962, until December 31, 1962. Subsequently, the City refused to pay in accordance with Edison's Rate Schedule FPC No. 2. The action followed the decision of the Ninth Circuit setting aside Commission Opinion No. 346 on November 15, 1962. Colton then paid Edison in accordance with the Company's lower "R" rate approved by the California Public Utilities Commission on November 9, 1957.

The agreement negotiated by Edison and Colton eliminates the additional delay and expense of further litigation or hearing of the remaining issues in dispute between the parties while providing Colton with a substantial compensation for the higher rates it paid to Edison as a result of increased rate schedules which should have been but were not filed with this Commission for its approval. Moreover, application of Edison's proposed "R-1" rate will result in a reduction of approximately $110,000 in annual charges to Colton based upon 1964 revenues of Edison computed in accordance with its Rate Schedule FPC No. 2. It is our view that the proposed settlement agreement is in the public interest. It is our further view that it is in the public interest and good cause has been shown for Edison's proffered rate schedules "R" and "R-1" to be made effective as of June 1, 1962 and January 27, 1964, respectively.

The proceeding in Docket No. E-7019 is terminated as hereinafter provided. In the event of dismissal of the proceeding currently pending in the United States Court of Appeals for the Ninth Circuit involving this Commission's Opinion No. 346 and Order, the proceeding in Docket No. E-6821 will be terminated. By our action in this order we indicate our approval of Edison's accounting entries for disposition of the special reserve fund established pursuant to our order of July 31, 1961 (26 FPC 223, 237-38).

The Commission finds:

(1) Good cause has been shown for waiver of the prior notice requirements of Section 205 of the Federal Power Act and acceptance for filing of Edison's proposed Rate Schedule FPC No. 26 to become effective for the period from June 1, 1962 through January 26, 1964, and Edison's proposed Rate Schedule FPC No. 27 to become effective as of January 27, 1964.

---

[5] Remaining issues on remand before the Court of Appeals for the Ninth Circuit include questions concerning matters other than jurisdictional items; *i.e.,* challenges to the Commission's application of its rate schedule filing requirements, exclusion of certain proffered evidence and the Commission's provision for the special reserve account referred to above.

(2) It is necessary and appropriate for the purposes of the Federal Power Act that the rate suspension proceeding in Docket No. E-7019 be terminated as hereinafter ordered.

(3) The plan of disposition of amounts included in Edison's special reserve account established as directed by Opinion No. 346 and Order is consistent with the purposes of that Opinion and Order and the provisions of the Federal Power Act.

The Commission orders:

(A) The prior notice period provided in Section 205(d) of the Federal Power Act is hereby waived with respect to the proposed rate schedules referred to in finding (1) above, and they are hereby allowed to take effect as of the dates set forth therein.

(B) The issuance of this order shall constitute full notice of the filing and publication of the rate schedules in question insofar as their effective date is concerned.

(C) Nothing contained in this order shall be construed as a waiver in any other respect of the requirements of Section 205(d) of the Federal Power Act or the Commission's Regulations thereunder; nor shall it be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract, or practice affecting such service or rate provided for in the rate schedules as above designated, nor shall this order be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate.

(D) This order is without prejudice to any findings or orders which have been or hereafter may be made by this Commission in any proceeding by or against Edison.

(E) The Commission proceeding in Docket No. E-7019 is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE DETROIT EDISON COMPANY AND CONSUMERS POWER COMPANY, DOCKET NO. E-7206;[1] THE DETROIT EDISON COMPANY, DOCKET NO. E-7207[2]

ORDER DESIGNATING APPLICATIONS FOR HEARING

(Issued February 4, 1965)

On November 13, 1964, The Detroit Edison Company (Detroit) and Consumers Power Company (Consumers) jointly filed an application pursuant to Section 202(e) of the Federal Power Act for an order authorizing the transmission of electric energy from the United States to Canada.[1] On the same date,

---

[1] The application was filed and public notice subsequently given thereof under Docket No. E-6515, the docket under which Detroit secured its original authorization to transmit power to Canada in 1953 and under which it has secured several modifications of that order. Since the present application is made in the name of Consumers as well as Detroit, and to help make clear that our action herein is independent of and does not affect the outstanding authorizations granted under the style of Docket No. E-6515, we have renumbered the present docket.

[2] This permit is also being given a new FPC docket number to distinguish it from the permit issued to Detroit on October 12, 1953 (Docket No. E-6516), authorizing the construction, operation, and maintenance of two lines between the United States and Canada which are not affected by our present action.

Detroit filed a separate application, in its name alone, for a Presidential Permit, pursuant to Executive Order No. 10485, dated September 3, 1953, to construct, operate, maintain, and connect additional facilities at the borders of the United States for the transmission of electric energy between the United States and Canada.[2]

Consumers, a corporation organized under the laws of the State of Maine, is authorized to do business as a foreign corporation in the State of Michigan and maintains its principal place of business at Jackson, Michigan. Detroit, a corporation organized under the laws of the State of New York and authorized to do business as a foreign corporation in the State of Michigan has its principal place of business at Detroit, Michigan.

Detroit (but not Consumers) presently is authorized, pursuant to an order of the Commission in Docket No. E–6515 of November 6, 1953, 12 FPC 1359, as amended by orders of December 17, 1956, 16 FPC 1348, and April 6, 1964, 31 FPC 781, to transmit a maximum of 1,000,000,000 kilowatt-hours annually of electric energy to the Hydro-Electric Power Commission of Ontario (Hydro) at a maximum transmission rate of not to exceed 600,000 kilovolt-amperes. It effects these transfers by means of two transmission lines between the United States and Canada for which a Presidential Permit was issued by the Commission pursuant to Executive Order 10485 on October 12, 1953. These are a 120,000 volt line crossing the Detroit River between Detroit, Michigan and Windsor, Ontario and a 115,000 volt line crossing the St. Clair River between Marysville, Michigan and Sarnia, Ontario. The latest application approved by the Commission was in April, 1964 and permitted Detroit to expand the use of existing facilities to their full capacity.

The instant applications would provide for a new EHV transmission line between the United States and Canada and would bring Consumers into the exchange for the first time. They constitute a major broadening and expansion of the cross-border exchanges.

In Docket No. E-7206, Detroit and Consumers would increase the maximum rate of transmission from 600,000 kilovolt-amperes to 750,000 kilovolt-amperes at present by using the new cross-border transmission line for which Detroit is seeking a permit in Docket No. E-7207. The new line is to be constructed by Detroit between the two existing lines described above and connecting Detroit's St. Clair Station in East China Township near St. Clair, Michigan and Hydro's Lambton Station to be located near Courtright, Ontario.

The new line is proposed to be operated initially at 230 kv, but would be designed for conversion to 345 kv. The capacity of this line operating initially at 230 kv will be 450,000 kva and when operated at 345 kv may be as high as 1,000,000 kw.

Section 202(e) of the Federal Power Act precludes us from issuing an order authorizing the transmission of power from the United States to a foreign country if it would either (1) impair the sufficiency of electric power in the United States or (2) would "impede or tend to impede the coordination in the public interest of facilities subject to jurisdiction of the Commission." The Executive Order contemplates that the issuance of a permit will be based upon a finding that the commission's action is consistent with the public interests. These general standards must be applied in the light of the directive of Section 202(a) of the Act that the Commission should promote the voluntary interconnection and coordination of facilities for the generation, transmission, and sale of electric energy "[f]or the purpose of assuring an abundant supply of electric energy throughout the United States with the greatest possible economy and with regard to the proper utilization and conservation of natural resources."

---

[2] See footnote on page 177.

On the basis of the material before us, a question is raised whether the applicants meet these standards. Hydro is directly interconnected to the East with both the Niagara Mohawk Power Corporation, a public utility under the Federal Power Act, and the Power Authority of the State of New York (PASNY), and through them with numerous other utility systems in the eastern part of the United States. It is clear therefore that applicants' interconnections with Hydro could form part of an integrated electrical system tying the Midwest to the East to the mutual benefit of the companies and power consumers in both regions. See National Power Survey Report pp. 235–6. However, the underlying agreement between Detroit, Consumers, and Hydro contains a number of provisions which appear to be intended to frustrate such coordination in the public interest. In substance they are designed to insure that "any energy which Michigan may export to Hydro is to be used only within Canada, and any energy which Michigan may import from Hydro is to be generated wholly within Canada." The following is quoted from Supplement C to the Interconnection Agreement:

B. *Supplement C to Interconnection Agreement*

> 1. It is the intent of the parties to this interconnection agreement to assure continuation of the operation of their systems within the scope of Section 202(f) of the Federal Power Act which provides that, "The ownership or operation of facilities for the transmission or sale at wholesale of electric energy which is (a) generated within a State and transmitted from that State across an international boundary and not thereafter transmitted into any other State, or (b) generated in a foreign country and transmitted across an international boundary into a State and not thereafter transmitted into any other State, shall not make a person a public utility subject to regulation as such under other provisions of this part." Therefore, as in the past, any energy which Michigan may export to Hydro is to be used only within Canada, and any energy which Michigan may import from Hydro is to be generated wholly within Canada.
>
> 2. In order to assure that Michigan energy exports are always consumed wholly within Canada all of the following conditions must exist while Michigan is delivering energy to Hydro:
>
> (a) The direction of energy flow as monitored at the Beck #2 terminals on each of the five 230 kv, 60-cycle lines and the 115 kv, 60-cycle Beck-Caledonia line shall be in a westerly direction. Michigan will be advised if a reversal of direction appears remotely possible which could only occur under very unusual conditions. Energy delivery from Michigan will then be reduced or discontinued to prevent such reversal of direction.
>
> An exception to the above can be made if the direction of energy flow on all 60-cycle Hydro-New York interconnections at Niagara Falls is toward Hydro. Recording meter charts for the above six lines shall be mailed to Edison each week for retention.
>
> (b) During periods of 25-cycle energy flow from Hydro to New York the direction of energy conversion through the frequency converters at Buchanan Transmission Station and Beck #1 Generating Station must be toward the 60-cycle Hydro system, or the existence of one or more null points within Hydro's 25-cycle system must be demonstrated, beyond which points Michigan energy cannot pass.
>
> 3. In order to assure that Hydro energy deliveries to Michigan are always wholly generated within Canada all of the following conditions must exist while Hydro is delivering energy to Michigan:

(a) Hydro will not schedule energy delivery to Michigan coincident with a purchase, including water transfers, of 60-cycle energy from New York unless a physical break is made in Hydro's 60-cycle system, or the existence of one or more null points in that system are demonstrated, beyond which points New York energy cannot pass.

(b) During periods of 25-cycle energy flow from New York to Hydro the direction of energy conversion through the aforesaid frequency converters must be toward the 25-cycle system, or the existence of one or more null points in Hydro's system must be demonstrated, beyond which points New York energy cannot pass.

4. Hydro shall inform Michigan of any changes of Hydro facilities which will alter paths for possible energy flows between New York and Michigan.

These provisions raise substantial questions as to whether the proposed expansion of the interconnections and interchanges of power with Hydro in its present form will not "impede or tend to impede the coordination in the public interest of facilities subject to the jurisdiction of the Commission" and also may not be "inconsistent with the public interest."

We wish to make clear that it is not the fact that applicants seek stronger interconnections with a Canadian utility system which raises the problems discussed herein. As part of a pattern of interchange of energy by the applicants with all utilities with whom they can effectively interconnect in the public interests, an additional interconnection between applicants and Hydro could be useful and desirable. The question is, rather, whether the restrictions imposed on Hydro's freedom of operation in relations to the power exchanges with other United States utilities tends to impair coordination of all such facilities in the public interest.

Accordingly, the Commission orders:

(A) Pursuant to the authority contained in the Federal Power Act, and the Commission's Rules of Practice and Procedure, and of Executive Order No. 10485 dated September 3, 1953, a public hearing shall be held commencing at 10:00 a.m. (EST), March 15, 1965, in a hearing room of the Federal Power Commission, 441 G Street N.W., Washington, D.C. on the matters involved in and issues presented by the applications in Docket Nos. E-7206 and E-7207, which are hereby consolidated for the purposes of such hearing.

(B) Notices of intervention and petitions to intervene in this proceeding may be filed with the Federal Power Commission, Washington, D.C. 20426 on or before February 26, 1965, and in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-87

ORDER AUTHORIZING EXPORTATION OF NATURAL GAS

(Issued February 4, 1965)

On September 30, 1964, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP65-87 an application, as supplemented on December 24, 1964, pursuant to Section 3 of the Natural Gas Act for authorization to export natural gas from the United States to the Dominion of Canada in accordance with the terms of an agreement, dated April 21, 1954, as amended, between

Applicant and Union Gas Company of Canada, Limited (Union Gas) as further amended by an agreement, dated December 20, 1963, all as more fully set forth in the application, as supplemented, in this proceeding.

Pursuant to order issued in Docket No. G–612 on April 23, 1946, as amended by order issued on August 20, 1946, 5 FPC 472, 718, and by order in Docket No. G–619 issued on April 23, 1946, 5 FPC 476, and to a Presidential Permit issued in Docket No. G–611, Applicant was authorized to construct and operate facilities under the Detroit River to connect with Union Gas' facilities at the Canadian border and to export 5,500,000 Mcf of natural gas per year for sale and delivery to Union Gas during the months of April through October, in accordance with a contract between the parties, dated November 25, 1944. Deliveries under this latter contract are to terminate July 1, 1967.

Pursuant to an order issued in Docket No. G–2475 on June 30, 1956, 15 FPC 46, and an Amended Permit issued in Docket No. G–10798, Applicant was authorized to export up to 15,500,000 Mcf of natural gas per year for sale and delivery to Union Gas in accordance with the 1954 contract between the parties. The term of the 1954 contract extended to 1976 but said contract provided for termination, upon proper notice, if equivalent volumes of natural gas became available to Union Gas from Canadian sources. The latter contingency occurred and deliveries by Applicant ceased on October 27, 1959.

Applicant now seeks authorization to resume the exportation of natural gas for sale to Union in accordance with the terms of the 1954 contract, as amended by an agreement dated December 20, 1963. Pursuant to the 1954 contract, as amended on December 20, 1963, Applicant will deliver up to 15,500,000 Mcf of natural gas per calendar year. This volume is inclusive of the 5,500,000 Mcf per year available under the 1944 contract until July 1, 1967, the termination date of said contract. After termination of the 1944 contract, all of the 15,500,000 Mcf per year will be delivered in accordance with the 1954 contract, as amended December 20, 1963. No new facilities are required for the proposed service.

The existing and proposed services are as follows:

	Mcf at 14.73 psia		Total
	November to March	April to October	
Existing		5,500,000	5,500,000
Proposed	5,200,000	4,800,000	10,000,000
Total	5,200,000	10,300,000	15,500,000

The proposed and existing sales are interruptible or curtailable.

On September 30, 1964, Applicant filed an application in Docket No. G–10798 for further amendment of the Amended Permit issued June 3, 1957, in such docket.

Notice of the filing of the instant application was issued on November 2, 1964. This notice fixed November 30, 1964, as the last day for filing protests or petitions to intervene. Several petitions to intervene and a notice of intervention by the Michigan Public Service Commission were filed herein. None of said petitioners or the Michigan Commission requests a hearing in this proceeding. One of the petitioners, Trans-Canada Pipe Lines Limited, withdrew its petition to intervene; the remaining petitioners and the Michigan Commission support the subject application. Opportunity for hearing has been given by the issuance of said notice and the publication thereof in the Federal Register on November 7, 1964 (29 F.R. 15108).

The Commission finds:

The exportation of natural gas by Applicant, Panhandle Eastern Pipe Line Company, from the United States to Canada in accordance with the contract, dated April 21, 1954, as amended, between Applicant and Union Gas, as further amended by an agreement, dated December 20, 1963, will not be inconsistent with the public interest within the meaning of Section 3 of the Natural Gas Act provided that said exportation be continued on the terms and conditions hereinafter set forth:

(a) Applicant shall file statements or reports with the Commission from time to time under oath and in such details as the Commission may require with respect to the whole or any part of the instant export operation.

(b) The authorization granted herein is not transferable or assignable and shall remain in full force and effect only so long as Applicant continues the acts or operations herein authorized in accordance with the terms and conditions herein set forth.

(c) The authorization granted herein shall automatically terminate upon the termination or expiration of the 1954 contract, as amended December 20, 1963, attached as an exhibit to the application herein, and, upon the termination of said contract, as amended December 20, 1963, by discharge as a result of performance or completion, Applicant shall forthwith notify the Commission in writing of the fact and date of said termination.

(d) Applicant shall not, during the terms of the authorization granted by this order, materially change or alter its export operations without first obtaining the permission and approval of the Commission.

(e) In the event that Applicant should abandon or permanently cease for any reason whatsoever all or any part of the instant export operation prior to the termination date of the contract, as amended, described in (c) hereof, Applicant shall forthwith notify the Commission of said fact and the reason therefor.

(f) The maximum annual volume and maximum daily volumes exported for sale to Union Gas should not exceed 15,500,000 Mcf and 55,000 Mcf, respectively, under the instant authorization and the authorizations in Docket Nos. G–612 and G–619.

(g) The volumes of gas exported for sale to Union Gas during the period of November through March of each year should not exceed 5,200,000 Mcf.

(h) Applicant should advise the Commission when (during 1967) volumes of natural gas exported for sale to Union Gas in accordance with the contract of November 25, 1944, are terminated and become deliverable under the instant authorization.

(i) The export authorization hereinafter issued is granted on the express condition that the interruptible service authorized hereinafter shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

The Commission orders:

(A) Authorization be and the same is hereby granted to Applicant to export natural gas from the United States to Canada in accordance with the contract, dated April 21, 1954, as amended, between Applicant and Union Gas, as further amended by an agreement, dated December 20, 1963, attached as an exhibit to the application herein, upon the conditions herein set forth and subject to the provisions of the Natural Gas Act and the Commission's regulations issued thereunder.

(B) The maximum annual volume and maximum daily volumes exported for sale to Union Gas shall not exceed 15,500,000 Mcf and 55,000 Mcf, respectively, under the instant authorization and the authorization in Docket Nos. G-612 and G-619.

(C) The volumes of gas exported for sale to Union Gas during the period of November through March of each year shall not exceed 5,200,000 Mcf.

(D) Applicant shall advise the Commission when (during 1967) volumes of natural gas exported for sale to Union Gas in accordance with the contract of November 25, 1944, are terminated and become deliverable under the instant authorization.

(E) This export authorization issued hereby is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(F) The related Amended Permit, as further amended, is released concurrently with the issuance of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

ALABAMA ELECTRIC COOPERATIVE, INC. v. ALABAMA POWER COMPANY, DOCKET NO. E-7183

ORDER PROVIDING FOR HEARING AND DENYING MOTION TO DISMISS COMPLAINTS

(Issued February 5, 1965)*

This order directs a hearing on issues raised in two complaints filed by the Alabama Electric Cooperative, Inc., Andalusia, Alabama, against the Alabama Power Company, Birmingham, Alabama. One complaint was filed on September 23, 1964, and a second complaint, in the form of a supplement to the initial complaint, was filed November 17, 1964. Answers to the complaints and motions to dismiss were filed by Alabama Power Company on October 26, 1964 and November 27, 1964. Alabama Electric Cooperative on November 5, 1964, responded to Alabama Power Company's October 26, 1964 motion to dismiss. This order denies Alabama Power Company's motions to dismiss.

Alabama Electric Cooperative complains that Alabama Power Company's existing rates to the Cooperative for wholesale electric service are unlawful within the meaning of Sections 205 and 206 of the Federal Power Act, and that the Company's proposed rates (not yet on file with this Commission) for wholesale electric service to the Cities of Troy, Alabama, and Luverne, Alabama, are similarly unlawful.

Currently Alabama Electric Cooperative, a generating and transmission cooperative serving other cooperatively owned electric systems, municipally owned electric systems and industrial customers, secures a portion of its wholesale electric supply from Alabama Power Company under the latter's Rate Schedule FPC No. 24. The Cities of Troy and Luverne are currently served by Alabama Electric Cooperative but in the near future propose to secure electric service directly from Alabama Power Company. Service will be commenced on or about June 1, 1965. Alabama Electric Cooperative seeks an investigation and hearing prior to that date. Although not currently on file with this Commission, the pleadings herein indicate that the rate which Alabama Power Company proposes to serve Troy and Luverne is substantially the same as the rate under which the Company now supplies wholesale electric service to Alabama Electric Cooperative.

---

*See order denying rehearing, etc., issued March 19, 1965, 33 FPC 586.

Numerous underlying arguments concerning the proper basis upon which to ascertain the lawfulness of Alabama Power Company's rates to the Cooperative and to the two Cities, the jurisdiction of this Commission over the Company's wholesale electric service, the time within which the Company shall file its rate schedules for wholesale electric service to the Cities, and the appropriate terms and conditions for service by the Company to the Cooperative and the Cities make it necessary to direct a hearing on questions raised in the complaints and answers thereto, and to deny the motions to dismiss, without prejudice to their being renewed at the conclusion of the hearing. It has been contended that the complaints are premature. Under the circumstances presented here where firm contracts for such sales to commence at a fixed date are already in existence, a person who would be affected thereby need not await the date of filing to commence otherwise valid complaint proceedings.

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 201, 202, 205, 206, 301, 306, 307, 308 and 309 thereof, that (1) a public hearing be held on the issues raised by Alabama Electric Cooperative's complaints and Alabama Power Company's answers thereto, except insofar as the latter seek a dismissal of those complaints; and (2) Alabama Power Company's motions to dismiss be denied.

The Commission orders:

(A) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Federal Power Act, and pursuant to the Commission's Rules of Practice and Procedure, a public hearing shall be held commencing at 10 a.m. (EST), March 16, 1965, in a hearing room of the Federal Power Commission, 441 G Street, NW., Washington, D.C., on the matters involved in and on the issues presented by the complaints filed by Alabama Electric Cooperative and the answers thereto filed by Alabama Power Company in the above-entitled proceeding.

(B) A prehearing conference shall be held before the presiding examiner commencing at 10 a.m. (EST), February 15, 1965, in a hearing room of the Federal Power Commission, 441 G Street NW., Washington, D.C., for purposes as specified in the Commission's Rules of Practice and Procedure.

(C) Alabama Power Company is hereby directed pursuant to the provisions of the Federal Power Act, particularly Sections 301, 306, 307, 308 and 309 thereof, to grant to the members of the staff of the Federal Power Commission during regular business hours free access to and opportunity to inspect and examine all facilities, properties, accounts, memoranda and other records of the Company when requested so to do for the purposes of the hearing ordered herein.

(D) Notices of intervention and petitions to intervene in this proceeding may be filed with the Federal Power Commission, Washington, D.C., 20426 on or before March 1, 1965, and in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

(E) The motions filed by Alabama Power Company to dismiss the complaints filed by Alabama Electric Cooperative in the above-entitled proceeding are hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CITY OF BAINBRIDGE, GEORGIA, DOCKET NO. CP65-156

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES

(Issued February 5, 1965)

On November 25, 1964, the City of Bainbridge, Georgia (Applicant), filed in Docket No. CP65-156 an application pursuant to Section 7(a) of the Natural Gas Act for an order directing South Georgia Natural Gas Company (South Georgia) to establish another physical connection of its facilities with those of Bainbridge. There is now a physical connection between the Applicant's distribution facilities and South Georgia's transmission system and the sale of Applicant's gas requirements is now being made. However, Applicant states that it has contracted to make a sale to Southern Nitrogen Company, located in West Bainbridge, as an interruptible gas customer thus making it necessary and convenient to obtain a second delivery point to serve the new customer and to provide better service to Applicant's existing customers.

The cost to South Georgia is estimated at $110,217 for 4 miles of 6⅝-inch high-pressure line extending from the present delivery point to West Bainbridge.

Applicant proposes to construct 7,500 feet of 4½-inch intermediate-pressure line at an estimated cost of $32,820 in order to complete the interconnection of South Georgia's and Applicant's facilities.

On December 23, 1964, South Georgia filed an answer to Applicant's application wherein no objection to the requested order is raised. South Georgia agrees to make the connection requested.

Due notice of the filing of the application and opportunity for hearing thereon has been published in the Federal Register on December 11, 1964 (29 F.R. 17013). No protest, petition to intervene or notice of intervention in opposition to the granting of the application has been filed.

The Commission finds:

(1) South Georgia Natural Gas Company is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 2, 1954, in Docket No. G-1915 (13 FPC 666).

(2) Applicant, City of Bainbridge, is a municipality organized and existing under the laws of the State of Georgia and is authorized to sell and distribute natural gas to the inhabitants of said city. Applicant is now engaged in the business of buying natural gas from South Georgia and reselling it to the consumers in that city.

(3) It is necessary and desirable in the public interest that South Georgia Natural Gas Company construct and establish the physical connection of its facilities with the facilities of the Applicant at the point requested.

(4) The establishment of a second connection of facilities of South Georgia with the distribution system of Applicant will not place an additional burden upon it nor will it impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) South Georgia Natural Gas Company be and is hereby directed to establish and maintain the additional physical connection of its natural gas transmission system with the Applicant's distribution system at the point described in the application.

(B) Applicant shall be prepared to receive natural gas from South Georgia within six months from the date of issuance of this order through the proposed facilities to be constructed and operated by it.

(C) South Georgia shall report to the Commission in writing within ten days of the commencement of service to the Applicant by means of the new connection of facilities.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CHIPPEWA AND FLAMBEAU IMPROVEMENT COMPANY

ORDER APPROVING HEADWATER BENEFITS ARRANGEMENT

(February 8, 1965)

By letters dated April 10, 1964, and September 11, 1964, the Chippewa and Flambeau Improvement Company (Company) requested approval of assessments for headwater benefits which it provided for the period July 1, 1963, through June 30, 1964.[1] Section 13.1 of the Regulations under the Federal Power Act provides for the filing of headwater benefit settlement arrangements in lieu of a headwater benefit determination under subsection 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

The Company is owned by three utilities and two pulp and paper companies which operates some 15 hydroelectric plants receiving headwater benefits from the Company's four reservoirs.[2] These five corporations and their respective hydroelectric projects are listed below:

Corporation	*Hydroelectric Project*
Cornell Paperboard Products	Cornell Plant
Dairyland Power Cooperative	Flambeau Hydro
	Ladysmith Plant
	Thornapple Plant
	Port Arthur Plant
Kansas City Star Company	Upper Mill
	Lower Mill
	Pixley Rapids
	Crowley Rapids
Lake Superior District Power Company	Big Falls Plant
Northern States Power Company	Holcombe Plant
	Jim Falls Plant
	Wissota Plant
	Chippewa Falls Plant
	Dells Plant

These corporations make payment to the Company for headwater benefits according to the Laws of Wisconsin 1911, ch. 640, as amended, Laws of Wisconsin 1913, ch. 759, and Laws of Wisconsin 1921, ch. 339, which is the Company's enabling act.[3] The system presently used for apportioning tolls under this statute is according to a ratio determined by dividing each plant's average toll head by the total toll head of all the plants receiving benefits from the same headwater improvements. This method is substantially the same as the method described in detail in the Commission's order issued August 31, 1964, in *Wisconsin Valley Improvement Company*, Docket No. E-7178, 32 FPC 678.

---

[1] On April 6, 1964, 31 FPC 779, the Commission approved assessments for headwater benefits provided between June 10, 1920, when the Federal Water Power Act (Part I of the Federal Power Act since 1935) was approved, and June 30, 1963.

[2] Rest Lake, Moose Lake, Chippewa Reservoir, and Flambeau Reservoir. The Company leases the Chippewa Reservoir, Licensed Project No. 108, from Northern States Power Company.

Under this system, the owners of downstream plants for the period July 1, 1963, through June 30, 1964, were assessed as follows:

Cornell Paperboard Products	$14, 515. 06
Dairyland Power Cooperative	23, 241. 78
Kansas City Star Company	27, 125. 13
Lake Superior District Power Co	28, 322. 62
Northern States Power Co	187, 094. 47
Total	280, 299. 06

The Commission finds:

(1) The aforesaid assessments from July 1, 1963, through June 30, 1964, are reasonable compensation to the Chippewa and Flambeau Improvement Company for headwater benefits from its developments on the Chippewa and Flambeau Rivers.

The Commission orders:

The aforesaid assessments from July 1, 1963, to June 30, 1964, and future assessments similarly made are approved under section 13.1 of the Regulations under the Federal Power Act in lieu of the headwater benefit determination under subsection 10(f) of the Federal Power Act.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO. CP65-64

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1965)

On December 18, 1964, Eastern Shore Natural Gas Company (Applicant), Salisbury, Maryland, filed in Docket No. CP65-64 an application to amend the order of the Commission issued in said docket November 23, 1964, 32 FPC 1352, which order authorized, among other things, the construction and operation of 30.25 miles of 4-inch and 6-inch pipeline from Bridgeville, Delaware to Cambridge, Maryland.

By the instant application to amend, Applicant seeks authorization to substitute 6-inch pipe in lieu of the presently authorized 4-inch pipe on an 8.47 mile segment of pipeline from East New Market, Maryland to Cambridge, Maryland which will obviate looping a segment of the authorized facilities upon the anticipated expansion of the natural gas market in Cambridge, Maryland.

The application states that the proposed substitution will result in a reduction in estimated construction costs from the originally estimated $351,900 to the presently estimated $347,239, a savings of $4,661.

---

[3] The pertinent section of this act as amended, is set out in the Commission's order of April 6, 1964, approving the settlement arrangement through June 30, 1963.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 29, 1964 (29 F.R. 18533). No protest or petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission order issued November 23, 1964, in Docket No. CP65–64 be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Eastern Shore Natural Gas Company in the Commission order of November 23, 1964, in Docket No. CP65–64 be and the same is hereby amended so as to authorize the changes it requests as is more particularly described in the aforementioned application which is on file with the Commission.

(B) In all other respects the order in Docket No. CP65–64 shall remain in full force and effect.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

GEORGIA POWER COMPANY, DOCKET NOS. E–7099 AND E–7193

ORDER APPROVING SETTLEMENT OF CERTAIN ISSUES RELATIVE TO WHOLESALE SERVICE BY GEORGIA POWER COMPANY TO RURAL COOPERATIVES

(Issued February 8, 1965)

This order approves as being consistent with the public interest and in accordance with the relevant provisions of the Federal Power Act an offer of settlement which was submitted to the Presiding Examiner by counsel for Georgia Power Company (Georgia), and counsel for Georgia's cooperatively-owned wholesale electric customers. The Presiding Examiner on January 19, 1965, certified the proposed settlement to us for our consideration. A copy of the proposal (an agreement between Georgia and the Georgia Electric Membership Corporation[1]) is attached and made a part hereto as an Appendix.*

The proceedings in the above two dockets commenced with the issuance in Docket No. E–7099 of our order to show cause on May 27, 1963, 29 FPC 1049, as amended by order issued July 15, 1963, 30 FPC 197. As more fully appears from that order, we there referred to certain provisions in the wholesale rate schedules on file with the Commission as appearing to be "restrictive" and to as having "the effect of restricting the rural electric cooperatives and municipalities from reselling to certain classes of potential customers power purchased from Georgia Power under the filed rate schedules and contracts." We there were concerned both with contracts for the wholesale sale of power to Georgia's rural electric cooperative customers[2] and contracts for the wholesale sale of power to its municipally-owned wholesale customers.[3]

---

[1] A state-wide service organization of cooperatively-owned utilities in Georgia.

*Omitted in printing.

[2] The numerous cooperatively-owned wholesale customers of Georgia are identified in the Commission's Order to Show Cause issued May 27, 1963, Appendices A and B thereto.

[3] The numerous municipally-owned wholesale customers of Georgia are identified in the Commission's Order to Show Cause issued May 27, 1963, Appendix C thereto, the Commission's amendatory order issued July 15, 1963, Docket No. E–7099, and Order of Suspension and Hearing issued November 25, 1964, Docket No. E–7193.

On November 25, 1964, 32 FPC 1368, we issued an order in Docket No. E–7193 by which we, among other things suspended for one day two rate schedule submittals of Georgia, containing similar restrictions. Our order of November 25 directed a hearing on the lawfulness of the suspended rate schedules which provide for wholesale electric service to Cairo, Georgia, and consolidated for hearing purposes, that docket (No. E–7193), with the proceedings initiated by our earlier order, May 27, 1963, Docket No. E–7099. The consolidated hearing is set for February 15, 1965.

Since the initiation of this proceeding, various informal settlement conferences have been conducted among representatives of Georgia, its wholesale customers and Commission staff. A prehearing conference called by the Presiding Examiner was held on January 15, 1965. At that conference, the "Offer of Settlement of Issues Relative to Wholesale Service to Rural Cooperatives" was received by the Examiner, (Appendix). As more fully appears in the Appendix, the proposed settlement would:

(1) Withdraw rate schedule WR–2 which was referred to in the first paragraph of the Show Cause Order of May 27, 1963. WR–2 provides for a dual rate arrangement and increased rates applicable to electric utility service secured under WR–2 and used by purchasers thereunder to meet their larger electric utility loads.

(2) Withdraw the so-called "applicability" clause in rate schedule WR–5, which was quoted verbatim in the second paragraph of our order of May 27, 1963. This clause in effect restricted the right of Georgia's cooperatively-owned wholesale electric customers to purchase electric service from Georgia if those Cooperatives thereafter undertook to resell to customers having demand of 100 kw or more at rates lower than standard rates of Georgia for such service.

(3) Change the language of paragraph 11 of rate schedule WR–5, which was quoted verbatim in the Show Cause Order of May 27, 1963, by ameliorating some of its restrictions as contained therein.

(4) Change certain other provisions of rate schedule WR–5, which, although not referred to in our Show Cause Order, have been agreed upon by Georgia and its cooperatively-owned customers.

At the pre-trial conference, Georgia and the Cooperatives strongly supported acceptance of the modified rate schedules, under which Georgia would serve the Cooperatives as a final settlement of the proceedings insofar as sales to the Cooperatives are concerned. The Commission's staff, although concurring in the certification of the proposal to the Commission, expressed neither approval nor disapproval of its terms.

At the pre-trial conference, counsel for various municipally-owned wholesale customers of Georgia stated that his clients did not want to "obstruct any possible settlement that could be made" but expressed concern about the "possibility of some legal implication arising from this settlement agreement as to the issues which we will raise." (Tr. p. 43). Counsel for the City of Cairo, one of the intervenors herein, though not specifically objecting to the proposed settlement expressed even more clearly his concern that the settlement might in some way affect future findings of this Commission to load limitations. (Tr. pp. 45–46.) He stated: "we would strongly object to the approval of the settlement if by so doing the Federal Power Commission would feel that it was setting a precedent", (Tr. 46) in some way applicable to the City of Cairo.

We believe that as a settlement, agreeable to the parties to the power contracts, the proposal submitted by the respondent should be accepted. The provisions of the sales contracts as proposed are obviously less restrictive upon the operations of the cooperative purchasers than those which previously existed and we do not believe that immediate effectuation of these gains should be deferred. It is clear, however, that our agreement to the settlement proposal here cannot be taken as a necessary indication of the action we would have taken upon consideration of a full evidentiary record in the proceeding to say nothing of indicating any prejudgment as to whether the contract provisions we are here approving as a matter of settlement to govern the relations between the respondent and its cooperative customers would be appropriate as applied to respondent's other wholesale customers. Accordingly, it is to be understood that our approval of the settlement is without prejudice to any rights of any parties not participating in the settlement, is not a prejudgment of any issues remaining in these proceedings, and is not to be deemed in any way a precedent concerning our future disposition of the remaining issues after the development of a full record and a full hearing. Specifically, nothing herein should be taken as necessarily indicating that a wholesale power supplier may insist, as a condition of doing business, that a retail distributor wishing to purchase power from it must agree to restrict its otherwise lawful area of operations or forego certain types of load.

The Commission further finds:

It is in the public interest and necessary and appropriate for the purposes of the Federal Power Act that the Offer of Settlement (Appendix) be approved and that the issues settled thereby be severed from Docket Nos. E-7099 and E-7193 and as to such matters these proceedings be terminated.

The Commission orders:

(A) The Offer of Settlement as set forth in the Appendix is hereby approved.

(B) The issues thereby disposed of hereby are severed from these proceedings and the proceeding initiated by Commission Order to Show Cause issued May 27, 1963, Docket No. E-7099 is hereby terminated as respects the substantive provisions of Georgia's "WR-2" and "WR-5" rate schedules and cooperatively-owned wholesale customers enumerated in Appendices A and B of that order.

(C) A copy of this order and Appendix shall be deemed to constitute a part of Georgia's rate schedules as referred to in paragraph (B) above.

(D) This order is without prejudice to any findings or orders which have been or may hereafter be made by this Commission in any proceeding now pending, or hereafter instituted, by or against Georgia.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CITY OF GRAND TOWER, ILLINOIS, DOCKET NO. CP65-168

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 8, 1965)

On December 11, 1964, the City of Grand Tower, Illinois (Applicant) filed in Docket No. CP65-168 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Natural Gas Pipeline Company of America (Natural) to establish a physical connection of its natural gas transportation facilities with the proposed facilities of the Applicant at a point within the city limits of Grand Tower and to sell and deliver natural gas to Applicant for distribution and resale in the City of Grand Tower, all as more fully set forth in the application.

Applicant's estimated peak day and annual gas requirements for the first three years of operations are as follows:

	First year	Second year	Third year
Peak day Mcf	207	286	362
Annual Mcf	18,890	25,050	31,230

Applicant proposes to construct a distribution system within its boundaries and a town border station at an estimated cost of $150,000.

On December 30, 1964, Natural filed an answer to the application herein stating that it has no objection to the issuance of the order requested by Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December 29, 1964 (29 F.R. 18533). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) Applicant, City of Grand Tower, is a municipality organized under the laws of the State of Illinois and is thereby duly authorized to construct and operate the gas distribution system proposed by it.

(3) It is necessary and desirable in the public interest that Natural be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 362 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Natural within one year from the date of issuance of this order.

(5) The requirement that Natural serve Applicant, as proposed, will not place any undue burden upon Natural nor impair its abilty to render adequate service to its existing customers.

The Commission orders:

(A) Natural Gas Pipeline Company of America be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 362 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application.

(B) Applicant shall be prepared to receive natural gas from Natural within one year from the date of issuance of this order.

(C) Natural shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP65-184

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1965)

On December 22, 1964, Natural Gas Pipeline Company of America (Applicant), 122 South Michigan Avenue, Chicago, Illinois, filed in Docket No. CP65-184 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of additional volumes of natural gas to an existing customer, all as more fully set forth in the application on file with the Commission.

Applicant proposes to sell and deliver an additional Daily Contract Quantity of 3,157 Mcf to Northern Indiana Public Service Company (Northern Indiana), to meet, in part, the request of an existing customer, Inland Steel Company, for an immediate increase in firm service.

The application states that the volume for which authorization is sought represents Applicant's remaining unallocated capacity. The application further states that no additional facilities will be required to render the proposed service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant to Northern Indiana, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (c)(3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas to Northern Indiana, as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(3) and (e) of Section 157.20 of such Regulations.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65–92

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1965)

On October 6, 1964, Northern Natural Gas Company (Applicant) filed pursuant to Section 7(c) of the Natural Gas Act an application, in Docket No. CP65–92 as supplemented on November 13, 1964, for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the sale of natural gas, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate facilities to enable it to deliver additional natural gas to Nebraska Natural Gas Company (Nebraska), consisting of (1) a total of approximately 13.7 miles of 24- and 30-inch pipelines, looping portions of Applicant's mainline near the Palmyra, Nebraska and Tescott, Kansas Stations respectively, and (2) necessary measuring and regulating facilities in Dodge County, Nebraska. This would increase Northern's system capacity by 4,600 Mcf per day.

Applicant seeks further authorization to sell the 4,600 Mcf of contract demand to Nebraska for resale to Fel-Tex, Inc., for use in the Fel-Tex plant to be located near Fremont, Dodge County, Nebraska.

The annual firm and interruptible sales to Fel-Tex in the third year of service are estimated to be 1,853,000 Mcf.

The estimated cost of Applicant's facilities is $1,241,200, and will be financed with cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The proposed construction and operation of facilities and delivery of natural gas by Applicant to Nebraska as hereinbefore described, and as more fully described in the application and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and delivery and sale of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in Paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation, delivery, and sale of natural gas to Nebraska as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within 120 days of the date on which this order issues.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

PACIFIC GAS & ELECTRIC COMPANY AND NEVADA IRRIGATION DISTRICT

ORDER APPROVING HEADWATER BENEFITS SETTLEMENT

(Issued February 8, 1965)

Pacific Gas & Electric Company (Pacific) on April 2, 1964, requested approval of an agreement with the Nevada Irrigation District (Nevada) concerning compensation for headwater benefits by each party to the other on the Feather River and its tributaries the Yuba and Bear Rivers in California. The Commission, as provided in section 13.1 of the Regulations under the Federal Power Act, may approve such settlements in lieu of a headwater benefits determination under section 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

The Commission recently authorized two projects in the Feather River basin by these parties. Pacific's Project No. 2310, an expansion of and addition to its earlier Project No. 889, consists of 22 reservoirs, three canals, seven power plants, 18 transmission lines, and various appurtenant works (29 FPC 1265). Nevada's Project No. 2266, a redevelopment of its earlier Project No. 338, includes nine reservoirs, several diversions and canals, and two proposed power plants (29 FPC 1256). Project works authorized by these two licenses are interspersed so that each licensee provides headwater benefits to the other.

Pacific and Nevada entered into two contracts concerning the operation of these developments in the Feather River basin. The so-called Revised Contract, dated June 7, 1943, covering the developments under the earlier licenses, stated at page 34:

> It is mutually agreed (1) that the divers figures used herein relating (a) to prices for water delivered at Lake Spaulding hereunder or purchases by District [Nevada] from Pacific at Lake Spaulding or at other designated places, (b) to the respective quantities of water deliverable to Pacific by District or by Pacific to District, and (c) to and used in the various formulae herein set out, and (2) that the agreed transmission losses in District water from Lake Spaulding and Bear River headdam to the respective points of redelivery thereof to District, were arrived at by Pacific and District after full and informed consideration by their respective representatives, both severally and in divers mutual conferences, of all factors involved and that said figures are reasonably correct and shall conclusively control in all respects in the performance by them of the provisions hereof irrespective of any measures either party shall hereafter take in improving its facilities, and shall not during the term hereof be changed or modified by any court or arbitration board. Any such figure or figures shall be changed only with the mutual written agreement of the parties.

The so-called Consolidated Contract, dated July 12, 1963, covering the developments under the present licenses states at page 3:

> The parties specifically understand and agree that in their negotiations they have taken into full account the provisions of Section 10(f) of the Federal Power Act relating to upstream benefits. They agree that such benefits are of the essence of this agreement and that the considerations forming a part of this agreement take into full account and include both those upstream benefits to be provided by Nevada to Pacific, and those upstream benefits to be provided by Pacific to Nevada, and that neither party during the term of this Part I is entitled to any further consideration with respect to such benefits. In the event that, by reason of any requirement of the Federal Power Commission or other governmental authority having jurisdiction so to do, either party hereto is required to pay headwater benefits to the other by reason of such facilities, the amounts to be paid by Pacific to Nevada hereunder shall be reduced by the amount of any such headwater benefit payment made to Nevada or increased by the amount of any such headwater benefit payment received from Nevada.

Since each party by these contracts relinquished rights to payments for headwater benefits to obtain other valuable rights, the agreements are contracts concerning headwater benefits compensation which may be filed by the parties under Section 13.1 of the Regulations under the Federal Power Act.

The Commission finds:

The agreements dated June 7, 1943, and July 12, 1963, by the Pacific Gas & Electric Company and the Nevada Irrigation District constitute an effective and reasonable method for compensating Pacific for benefits received from Nevada's Project No. 2266 and its predecessor Project No. 338 and for compensating Nevada for benefits received from Pacific's Project No. 2310 and its predecessor Project No. 889.

The Commission orders:

The aforesaid agreements are approved with respect to settlement of headwater benefits under Section 13.1 of the Regulations under the Federal Power Act in lieu of a headwater benefit determination under Section 10(f) of the Federal Power Act until a further order of the Commission may be required due to changes in conditions.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP61-123

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1965)

On October 24, 1960, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP61-123 an application, as supplemented and amended on January 4, March 15 and August 31, 1961, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain new facilities and the operation of certain existing facilities in order to sell and deliver an additional 50.154 Mcf of natural gas per day to 42 existing customers, all as more fully set forth in the application, as supplemented and amended, in this proceeding.

Specifically, Applicant proposes to construct and operate the following facilities:

(1) Approximately 61.32 miles of 30-inch loop lines in Louisiana, Arkansas, Mississippi, Tennessee and Kentucky;

(2) Approximately 25.95 miles of 26-inch loop line in Kentucky and Louisiana;

(3) Approximately 8.28 miles of 6-inch loop line in Indiana;

(4) Approximately 22.4 miles of 20-inch and approximately 10.3 miles of 16-inch lateral supply pipeline in south Louisiana;

(5) Approximately 17.4 miles of 8-inch lateral supply pipeline in south Louisiana;

(6) One additional 2,000 horsepower compressor engine at the existing Lafayette, Louisiana, Compressor Station;

(7) An additional 2,000 horsepower compressor engine and other facilities to expand the existing West Greenville, Kentucky, Storage Field, and

(8) Five purchase meter stations in south Louisiana and one measuring station in Indiana.

Additionally, Applicant proposes to operate in interstate commerce the following existing facilities:

(1) Approximately 22.33 miles of 4- to 10-inch lateral supply pipelines in south Louisiana, and

(2) Five purchase meter stations in south Louisiana.

Applicant states that the subject proposal is for the purpose of assisting its existing customers to meet their estimated increased natural gas requirements.

The application, as amended and supplemented, shows the total estimated cost of the subject facilities to be $17,274,000, which cost will be financed by the issuance and sale of First Mortgage Pipeline Bonds and Common Stock.

By letters dated July 7 and October 6, 1961, Applicant was issued temporary certificates for the proposed facilities and service.

On December 1, 1960, Memphis Light, Gas & Water Division filed herein a petition to intervene and on December 20, 1960, the City of Memphis, Tennessee, filed a notice of intervention in this proceeding. Neither petitioner states objection to the issuance of the requested certificate nor to the disposition of this proceeding under the shortened procedure provided for by the Commission's Rules. Inasmuch as the shortened procedure is being used herein, no further action on said petition and notice appears necessary.

After due notice issued December 7, 1964, and published in the Federal Register on December 12, 1964 (29 F.R. 17055), no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as amended and supplemented, and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G-859 (8 FPC 190).

(2) The facilities hereinbefore described, as more fully described in the application, as amended and supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation of the proposed facilities, the operation of certain existing facilities and the proposed transportation and sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities, the operation of certain existing facilities and the proposed transportation and sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Gas Transmission Corporation, to construct and operate the proposed facilities, to operate certain existing facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61-1, ET AL.

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued February 9, 1965)

Phillips Petroleum Company (Phillips) on February 4, 1965, tendered an application for rehearing of the Commission's memorandum opinion and order rejecting a motion to disqualify Vice Chairman David S. Black from further participation in this proceeding (Opinion No. 447 issued January 12, 1965, 33 FPC 43).[1]

An application for rehearing of an interlocutory order, such as involved here, may not properly be filed [Section 1.30(e) of the Rules of Practice and Procedure (18 CFR 1.30(e))]. We have decided to treat Phillips' document as a motion for reconsideration.

Phillips' motion for reconsideration presents no new facts or principles of law which were not fully considered by the Commission in Opinion No. 447, or which, having now been considered, warrant any modification of that decision.

The Commission orders:

The motion for reconsideration filed herein by Phillips on February 4, 1965, is hereby denied.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65-162

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued February 9, 1965)

On December 7, 1964, Cities Service Gas Company (Applicant) filed in Docket No. CP65-162 an application pursuant to subsections (b) and (c) of Section 7 of the Natural Gas Act for permission and approval to abandon certain facilities in its transmission system serving the Kansas City, Missouri area, by removing and replacing some facilities and for authority to construct and operate certain other facilities to implement operations, as hereinafter described, all as more fully described in the application.

The facilities proposed to be constructed are for the following purposes: (1) provide for new delivery facilities into the Kansas City Market area and to maintain balance delivery patterns to its distribution company customers in that area; (2) maintain system inputs into Applicant's transmission system and ratable takes from producing areas connected to its system by offsetting declining well-head pressures; (3) increase the deliverability of its transmission system by more fully utilizing existing compressor facilities; (4) and replace facilities which have become physically deteriorated to the extent replacement thereof is deemed necessary. More specifically, Applicant proposes to:

---

[1] A number of other producers have tendered a joinder in the application for rehearing tendered by Phillips.

(1) Construct approximately 25 miles of 26-inch pipeline and approximately one mile of 16-inch pipeline between Applicant's Tonganoxie Compressor Station and The Gas Service Company's distribution systems in the North Kansas City area, together with two new sales metering stations and appurtenant regulator facilities; replace approximately 9.7 miles of Applicant's existing Ottawa-St. Joseph 16-inch pipeline with a 26-inch pipeline between Lawrence, Kansas, and Applicant's Tonganoxie Compressor Station; construct approximately 0.6 miles of 20-inch pipeline as a tieover pipeline between Applicant's Topeka and North Topeka 16-inch pipeline, all at an estimated cost of $3,044,000.

(2) Reclaim one 2,000 horsepower compressor unit from Applicant's Marion Compressor Station and install this unit at its American Compressor Station, at an estimated cost of $480,000.

(3) Construct approximately 1.45 miles of 8-inch pipeline to serve the City of Humboldt, Kansas; reclaim 1.68 miles of deteriorated 8-inch line now used to serve Humboldt; and replace 0.96 miles of Applicant's existing 5½-inch Humboldt lateral line with 8-inch line and regulator setting, at an estimated cost of $79,000.

(4) Loop approximately 8 miles of Applicant's Hugoton Compressor Station 30-inch intake pipeline with 26-inch pipeline, at an estimated cost of $500,000.

(5) Reclaim two 1,000 horsepower compressor units from Applicant's Pampa Compressor Station and install these units together with two new 2,000 horsepower units at a new 6,000 horsepower compressor station (to be called Burnett Compressor Station); and install 230 additional horsepower at each of Applicant's White Deer and Hughey Field booster stations, at an estimated cost of $1,700,000.

The total construction cost of the proposed facilities amounts to $5,803,000. The cost of facilities to be reclaimed amounts to $72,000 with a salvage value of $466,000. The adjusted total cost of the proposed projects is estimated at $5,409,000.

The cost of the proposed facilities will be paid for out of funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorizations sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities proposed to be abandoned by removal, as hereinbefore described in the application herein, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

(4) The facilities proposed to be constructed and operated, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the installation and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicant is able and willing properly to do the act and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application filed in this proceeding, be and the same are hereby granted to Applicant.

(B) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to install and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) The facilities hereby authorized shall be completed and placed in operation not later than one year from the date of this order, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations aforesaid.

(E) Permission for and approval of the abandonment by Applicant of the segments of pipeline facilities hereinbefore described and as more fully described in the application, in this proceeding, be and the same are hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black

VIRGINIA ELECTRIC & POWER COMPANY, DOCKET NO. E-6684

ORDER DENYING REHEARING AND STAY UPON AN INTERIM DETERMINATION AND BILLING AND FIXING HEARING ON TOTAL AMOUNT OF HEADWATER BENEFITS FOR PERIOD

(Issued February 11, 1965)

On January 12, 1965, Virginia Electric & Power Company, licensee for the Roanoke Rapids hydroelectric development, Project No. 2009, on the Roanoke River (N.C.-Va.), filed an application for rehearing and stay of the interim determination and billing, issued by the Commission on December 21, 1964, 32

FPC 1494, in the amount of $559,990 for certain energy gains from headwater benefits provided to the Roanoke Rapids project from August 1, 1955, through December 31, 1962, by the upstream United States' Philpott and John H. Kerr developments.

The billing expressly reserved the right to supplement the bill upon the Commission's final determination of the total amount of headwater benefits payments for the period August 1, 1955 through December 31, 1962. The billing included an additional amount of $33,900 for the cost to the United States through April 10, 1964, of making a headwater benefit determination pursuant to section 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

The proceedings in this docket were instituted on May 28, 1956, with an order directing a headwater benefits investigation in the Roanoke River basin (15 FPC 1470). Pursuant to this order, the staff prepared a proposed report, dated January 1962, recommending payments from August 1, 1955, when the first headwater benefits were found to have been provided to the licensee's development, through 1957. This report was served for comment upon the licensee, Department of the Interior, and Army Corps of Engineers. The staff's second proposed report, dated April 1964, incorporating certain suggestions made by these parties in response to the earlier report, recommended payment of $983,300 as the portion of the annual costs of interest, maintenance, and depreciation on the Kerr and Philpott headwater improvements to be paid by the licensee for energy gains at the Roanoke Rapids Plant from headwater benefits provided by Kerr and Philpott for the period August 1, 1955, through December 31, 1962, and $33,900 for the costs of the determination through April 10, 1964, a total of $1,017,200. This report also was served for comment upon the above designated parties.

The Corps of Engineers, responding to the staff's second proposed report by letters of August 18, 1964, and October 15, 1964, did not propose any significant change in the staff's recommendations.[1] The Secretary of the Interior by letter of July 28, 1964, stated that the United States headwater improvements provided not only the energy gains which were the basis of the staff's recommended payments, but also capacity gains whose value to the licensee was estimated by the Department of the Interior at $1,125,000 annually.

In its letter of July 27, 1964, licensee made two legal arguments with respect to the April 1964 staff report. First, the licensee contended that the staff should have allowed an offset for reregulation benefits provided by licensee's downstream Roanoke Rapids project. Secondly, the licensee contended that aside from the matter of such offset "an equitable solution would be attained" within the meaning of Section 10(f) if the licensee's charges "were determined at one-half the value of the net benefits received" at its downstream plant, plus the cost of making such determination. Licensee conceded that if these two arguments are invalid, it owed to the United States at least $559,990. No questions were raised regarding the accuracy of the amount of $33,900 as cost to the United States through April 10, 1964 in making the headwater benefit determination. The Commission's billing upon an interim determination was for the amount of $559,990, plus the cost of determination. In its application for rehearing licensee has repeated the two aforesaid legal arguments made in its letter on July 27, 1964, and contends that the Commission was without authority to make the interim determination and billing of December 21, 1964, and provide delinquency penalties for non-payment within 60 days pursuant to Section 17(b) of the Federal Power Act and Section 11.31 of the Commission's Regulations thereunder (18 CFR 11.31). In addition, the licensee requests a stay on the interim billing and penalties and that a hearing be granted on its assessment for the period.

---

[1] The Kerr and Philpott projects are operated by the Corps of Engineers and power from these projects is marketed by the Secretary of the Interior.

The methods used by the staff in its April 1964 report with respect to the part of the annual costs of interest, maintenance, and depreciation of the Kerr and Philpott headwater improvements to be paid by the licensee for the Roanoke Rapids project for energy gains are basically the same as those used by the Commission with respect to the Stevens Creek project of South Carolina Electric & Gas Company. Since the licensee concedes that the staff has met its burden of showing that licensee owes the United States at least $559,990 if its two aforesaid legal arguments are invalid, there is no necessity for hearing as to this amount, and the administrative record presently before the Commission provides an adequate basis for determining that this much is due and payable to the United States now, regardless of whether any additional amounts may also be payable.

The question of any offset for reregulation benefits provided by the downstream plant was involved and disallowed by the Commission's order issued March 28, 1963, concerning the Stevens Creek project of *South Carolina Electric & Gas Company* (29 FPC 624). Licensee was permitted to file briefs *amicus curiae* in the United States Court of Appeals for the Fourth Circuit on review of the Commission's order concerning the Stevens Creek project. The Court affirmed the Commission order disallowing the offset claim for reregulation by the downstream Stevens Creek project (*South Carolina Electric & Gas Co.* v. *F.P.C.*, 338 F. 2d 898, 903).

The licensee's alternative "equitable" argument is equally invalid. As the Court made clear in the *South Carolina Electric & Gas* case, *supra*, the language in Section 10(f) directing the Commission to order reimbursement by a licensee "for such part of the annual charges for interest, maintenance, and depreciation [on the upstream project of the United States] as the Commission may deem equitable" does not authorize the Commission to assess annual charges on an equitable allocation of the "value of the net benefits received downstream" between the United States and the licensee. Instead, the Court made clear the statutory language "means only that the proportion of such annual charges of [the upstream Federal project] and the rateable share thereof assignable to [the licensee] shall be determined equitably" (*ibid*). The measure of charges for the benefits provided to a licensed downstream plant is based on such part of the annual charges for interest, maintenance, and depreciation on the headwater improvement as the Commission may deem equitable, not some lesser or greater amount as the Commission might determine would be equitable based on some other factors extrinsic to the statutory 10(f) standard.

The licensee argues that we have no authority to make an interim order directing it to pay to the United States the amount of headwater benefits concerning which there is no factual dispute between it and the Commission pending determination of the full amount of such benefits due. In its view, until the entire matter is resolved after the extensive period of hearing necessary to make the factual findings on the matters remaining in dispute, the licensee is entitled to withhold, without any subsequent claim for interest, all of the amounts due to the United States including those which it admits would be due if its legal arguments are invalid. We think any such claim is patently unsound. The Commission's authority under Section 309 of the Act to "perform any and all acts and to prescribe, issue, make, amend, and rescind such orders, rules, and regulations as it may find necessary or appropriate to carry out the provisions of the Act" are obviously broad enough to permit it to divide the determinative process required by Section 10(f) of the Act whenever public interest so requires.

See *Federal Power Commission* v. *Tennessee Gas Transmission Company,* 371 U.S. 145; *Cf. Public Service Commission of New York* v. *F.P.C.,* 327 F. 2d 893, 895–897 (CADC). As the Supreme Court said in the *Tennessee* case, *supra,* at pp. 154–155, in approving an analogous interim order procedure under the Natural Gas Act:

> It is, therefore, the duty of the Commission to look at 'the backdrop of the practical consequences [resulting] . . . and the purposes of the Act,' *Sunray Mid-Continent Oil Co.* v. *Federal Power Comm'n,* 364 U.S. 137, 147 (1960), in exercising its discretion under § 16 to issue interim orders and, where refunds are found due, to direct their payment at the earliest possible moment consistent with due process. In so doing under the circumstances here the Commission's ultimate action in directing the severance and in entering the interim order was not only entirely appropriate but in the best tradition of effective administrative practice.

What is appropriate in our administration of the Gas Act to protect ultimate consumers is no less valid here where the protection of the rights of the United States itself are involved.

Accordingly, the motion for rehearing will be denied. Moreover, since we think that the *South Carolina Electric & Gas Co.* case, *supra,* clearly demonstrates the invalidity of licensee's legal arguments, we shall deny the request for stay of our interim determination and billing.

A public hearing will be set by notice of the Secretary of the Commission concerning the total assessments under Section 10(f) of the Federal Power Act for headwater benefits provided to licensee's Roanoke Rapids development by the Kerr and Philpott developments through December 31, 1962. The hearing shall include *inter alia,* the questions of the total energy and capacity gains for the period and the costs to the United States through the close of the hearing in making the determination. At such hearing, the licensee will have full opportunity to show why it believes no further amounts asserted by the staff or the Department of the Interior are due.

As indicated above, the interests of the Secretary of the Interior in the Kerr and Philpott developments are such that he will be expected to present evidence and otherwise participate in support of his position in this proceeding.

The Commission finds:

(1) It is appropriate and in the public interest that the aforesaid application for rehearing and stay of the interim determination and billing be denied.

(2) A public hearing on a total assessment under Section 10(f) of the Act for headwater benefits through December 31, 1962, in Docket No. E–6684 should be held, as hereinafter provided.

The Commission orders:

(A) The aforesaid applications by Virginia Electric & Power Company for rehearing and stay of the Commission's interim determination and billing, issued December 21, 1964, in Docket No. E–6684, are denied.

(B) A public hearing will be held, at a time and place to be fixed by notice of the Secretary of the Commission, respecting the question raised and the issues presented in Docket No. E–6684 concerning total assessments under Section 10(f) of the Federal Power Act for headwater benefits provided to the Roanoke Rapids development of Virginia Electric & Power Company by the John H. Kerr and Philpott reservoirs of the United States during the period August 1, 1955, through December 31, 1962, and the costs to the United States of the determination of such assessments.

Commissioner Ross *dissenting.*

Ross, *Commissioner dissenting:*

While I commend the majority in its laudatory purpose of seeking to achieve additional revenues for the Federal Government at the earliest possible moment, I do not believe that the rights of the parties should be compromised. It should be pointed out that the interim order procedure adopted in the *Tennessee* case, *supra*, involved a contested hearing involving rate of return. There was notice of the issue to be tried and an opportunity to be heard on the record. Here, on the other hand, there is no such record and the licensee at no time was aware of the far reaching consequences in replying to a staff report.

Furthermore, I do not believe that interim order billing advocated in this matter will continue to be productive. I assume in the future, that licensees will refrain from such concessions in advance of a scheduled hearing in order to protect their rights and bargaining position.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61-1, ET AL.

ORDER DENYING STAY

(Issued February 12, 1965)

On February 11, 1965, Phillips Petroleum Company filed a motion requesting stay of further Commission consideration or deliberation on the issues in this proceeding pending judicial review of Opinion No. 447, 33 FPC 43. In Opinion No. 447, we carefully considered and rejected a motion to disqualify Commissioner David S. Black from participation in this proceeding as without merit. On February 9, 1965, *supra*, p. 198, we denied reconsideration of this interlocutory order. Phillips states that it intends promptly to file a petition for review of Opinion No. 447 and moves that the Commission stay any action leading toward the formulation and issuance of a Commission decision herein pending such judicial review.

Oral argument in these proceedings was heard before the Commission, Commissioner Black participating, on February 8, 9, and 10, 1965, and the case is now ripe for our decision. We remain convinced that Commissioner Black is properly participating in this proceeding and that stay of our further deliberations pending an attempt to secure review of our interlocutory ruling would be contrary to the public interest.

The motion for stay is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE JUPITER CORPORATION, DOCKET NO. RI63-212; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-58

ORDER DENYING MOTION FOR CONTINUANCE

(Issued February 12, 1965)

On February 8, 1965, The Jupiter Corporation (Jupiter) filed its fourth motion for continuance in Docket No. RI63-212 in which it requests the Commission to continue all procedural dates in these proceedings, including the date for the service of Jupiter's evidence herein, until after the Commission has ruled upon the merits of the petitions and motions previously filed by Jupiter and now pending before the Commission. These dates for the service of evidence by the Commission Staff, Tennessee Gas Transmission Company (Tennessee), Jupiter and the interveners, and for prehearing conference, set by the Commission's order issued October 30, 1964, have already been extended four times for a combined period of eight weeks. These extensions were granted upon a motion for continuance filed by Tennessee and three such motions filed by Jupiter.

The Staff and Tennessee served their direct evidence on December 8, 1964. By order issued February 3, 1965, granting Jupiter's third motion for continuance, we directed Jupiter to serve its evidence upon all parties on or before February 15, 1965 and indicated that, in view of the several continuances previously granted, we did not expect to grant any extension beyond that date irrespective of whether there are motions or petitions pending before us at that time. In its motion filed February 8, 1965, Jupiter indicates that it has not begun to prepare its evidence in these proceedings because of the substantial expense in terms of time, effort and money which such preparation entails and its conviction that such preparation will not be necessary in view of its expected rulings on its petitions and motions by this Commission and/or the Courts.

By order issued December 5, 1962, 28 FPC 942, in Docket No. RI63-212, the Commission instituted an investigation under Section 5(a) of the Natural Gas Act into the rates and charges of Jupiter for the transportation of natural gas subject to the jurisdiction of the Commission. That investigation was directed in particular to Jupiter's rates for the transportation of gas in interstate commerce in the Rollover Field, offshore South Louisiana. Jupiter performs a transportation service for Pure Oil Company (Pure) by transporting gas sold by Pure to Tennessee from Pure's offshore platform in the Rollover Field to Tennessee's line onshore. Jupiter purchases gas from Phillips-Kerr McGee[1] in the Rollover Field and transports it onshore where it sells it to Tennessee. The difference in the price Tennessee pays Jupiter and the price Jupiter pays Phillips-Kerr McGee is in effect a transportation charge. In both cases the gas is transported through Jupiter's underwater pipelines and Jupiter separates the condensates from the gas at its plant onshore.

Following issuance of the Commission's order of December 5, 1962, our Staff contacted Jupiter's representatives for the purpose of making the necessary arrangements for a review of Jupiter's books by the Staff. After a series of protracted delays on its part, Jupiter furnished Staff with required data on May 22, 1963. In the fall of 1963 Staff completed a cost of service for Jupiter's transportation operations in the Rollover Field. Following a series of informal conferences between representatives of Jupiter and the Staff, Jupiter indicated that it intended to submit a settlement proposal in July, 1964. No such proposal was made.

On August 28, 1964, Tennessee filed with the Commission pursuant to Section 7 of the Act an application, docketed CP65-58, for a certificate of public convenience and necessity which would authorize it to lease and operate Jupiter's transportation facilities in the Rollover Field. By order issued October 30, 1964, [unreported] we consolidated Docket No. CP65-58 with Docket No. RI63-212 and provided for the serving of evidence and prehearing conference as stated above. In that order (p. 2) we stated our reasons for consolidation:

> In determining whether the issuance of a certificate to Tennessee in Docket No. CP65-58 is in the public interest, one of our basic considerations is to determine whether the proposed lease arrangement would operate in a

---

[1] Phillips Petroleum Corporation and Kerr McGee Oil Industries, Inc.

> way which would have an adverse effect on consumers. Such determination involves a comparison of the proposed annual rental fee under the lease agreement with Tennessee's purchased gas costs and can be properly made only after the Commission's determination of a just and reasonable transportation rate for Jupiter in Docket No. RI63-212. Since our decision as to whether the issuance of a certificate to Tennessee is in the public interest depends to a great extent upon our determination of a lawful rate in Jupiter's rate proceeding, it is appropriate that the two cases be tried upon a consolidated hearing record, as hereinafter ordered.

The consolidation order also constituted public notice of the certificate application filed by Tennessee.

Intervention in these consolidated proceedings was granted to Long Island Lighting Company (Long Island), Public Service Electric and Gas Company and Phillips-Kerr McGee. The Pennsylvania Public Utility Commission also filed notice of intervention herein. The Brooklyn Union Gas Company is an intervener in Docket No. RI63-212 only.

On November 12, 1964, Tennessee filed a motion to extend the time for serving its evidence from November 23, 1964 to December 21, 1964. By Notice of the Secretary dated November 20, 1964, upon consideration of Tennessee's motion, the time for service of Tennessee's and Staff's evidence was extended to December 8, 1964, and for Jupiter to January 7, 1965. Other dates were extended for a commensurate period. Staff and Tennessee filed their evidence in Docket Nos. RI63-212 and CP65-58, respectively on December 8, 1964. On December 16, 1964, Jupiter filed a motion to terminate these proceedings and a motion for extension of filing dates in which it requested that the time for serving its evidence be extended from January 7, 1965, to February 15, 1965, in order to give the Commission time to consider its motion to terminate and to give Jupiter time thereafter to take such steps as are requisite. By Notice of the Secretary dated December 29, 1964, upon consideration of Jupiter's motion the time for service of Jupiter's evidence was extended to January 21, 1965, and other dates were extended commensurately.

On January 8, 1965, Jupiter filed a second motion for continuance requesting that the date for serving its evidence be continued until the Commission has ruled upon its motion to terminate, and three new pleadings filed simultaneously therewith: A Petition for Declaratory Order and Motion to Dismiss Proceedings in Docket No. RI63-212, an Alternative Motion to Sever and to Stay Proceedings, and a Motion for Oral Agrument on these and its Motion to Terminate. By Notice of the Secretary dated January 18, 1965, Jupiter's date for service of its evidence was extended from January 21, 1965 to February 4, 1965 and other dates were again extended commensurately. On that same date, the Commission issued an order denying Jupiter's motion to terminate the proceedings.

In its third motion for continuance filed January 26, 1965, Jupiter requested that the procedural dates be further continued until the Commission had ruled on Jupiter's pending petition and alternative motion, upon a petition for rehearing of the Commission's January 18, 1965, 33 FPC 82, order denying Jupiter's motion to terminate and upon the pending certificate matters in *Union Texas Petroleum*, Docket No. G-13221, *et al.* As indicated, *supra*, we denied this general continuance by our order of February 3, 1965, but gave Jupiter a brief further extension to complete its evidence.

In support of its fourth and latest motion for continuance, Jupiter contends that its pending filings should be ruled upon at such time as to allow the Commission to harmonize such rulings with its decision on reserved Rollover Field issues raised in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, on which oral argument is scheduled for February 26, 1965. Jupiter also contends, as it has in previous filings, that before the Commission can decide either the Union Texas Petroleum reserved issue or Docket No. RI63–212 it must resolve the issue as to whether Commission's guideline, in-line and area prices apply to the interstate pipeline onshore or to gas sales by producers offshore. It is Jupiter's position that the level of its charges is irrelevant to the price to be paid by Tennessee and that any reduction in Jupiter's rates will produce a corresponding increase for the producers and will not reduce Tennessee's costs or costs to consumers. Jupiter contends that the Commission has not been fully advised as to the "public interest" and "protection of gas consumer" factors in these proceedings (presumably a reference to matters contained in its pending motions or the other proceedings it believes should be decided first) and expresses a clear unwillingness to even start to prepare its case in the 5(a) proceeding until these matters have been fully considered by the Commission and the Courts.

We have fully considered Jupiter's arguments contained in its motion for continuance filed February 8, 1965, and conclude that they do not justify further extension of time for Jupiter to serve its evidence in Docket No. RI63–212.

Jupiter argues that it should not be required to expend time, effort and money in presenting evidence in RI63–212, because it is convinced that such presentation will not be necessary when the Commission "and/or the Courts" have ruled on the merits of its petitions and motions. By separate order, *infra*, p. 213, we have denied Jupiter's application for rehearing of our denial of its motion to terminate these proceedings. Further, other than the motion for continuance herein involved, there remain for our consideration Jupiter's "Petition for Declaratory Order and Motion to Dismiss Proceedings in Docket No. RI63–212" and "Alternative Motion to Sever and Stay Proceedings". We are not passing on the merits of those filings at this time. However, it should be noted that the petition for declaratory order which challenges our jurisdiction over Jupiter was filed more than two years after institution of the proceedings in RI63–212. The motion to sever urges that these consolidated proceedings now be heard separately and that we proceed first with Tennessee's certificate application. That motion is in fact no more than an untimely application for rehearing and reconsideration filed more than two months after issuance of our order consolidating the proceedings. Jupiter's contention that because of the pendency of the aforementioned belated petition and motion it should not be required to expend time, money and effort in preparing and presenting its evidence is more than outweighed by the detriment to consumers resulting from the numerous delays in bringing the rate investigation to a posture of deciding whether the rates and charges involved are unjust and unreasonable.

Jupiter also contends that the public interest is not aided and gas consumers will not receive any benefit if it is determined that Jupiter's rates should be reduced because Tennessee is under no present obligation to pass on such reduction in rates. Jupiter's narrow construction of possible benefit to consumers is without merit. We are not without authority under the Natural Gas Act to give effect in Tennessee's rates, if warranted, to reductions in its cost of service. Moreover, if such reductions in cost do not warrant an immediate reduction in Tennessee's rates it is quite likely that they aid in preventing filing of increases in rates. Our duty under the statute lies in determining just and reasonable rates for each natural gas company at such time as it appears that the rates of such company may be unlawful.

Jupiter also seeks to inject into these proceedings the issue of "guideline" "in-line" and "area" prices and a further contention that any ruling on its filings herein must be "harmonized" with any decision the Commission may reach in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.* The relevancy of these contentions, if any, to the investigation and determination of Jupiter's transportation rates may be appropriate matters Jupiter would seek to introduce as part of its evidence or matters which they would brief after hearing, but in our view do not justify further delay of these proceedings. Whether Jupiter seeks to present justification for its rates on a cost basis or any other basis is in the first instance a matter of its own selection and second a question of admissibility to be ruled upon by the presiding examiner.

The continued delays in this § 5(a) proceeding, instituted more than two years ago are entirely unwarranted and contrary to the public interest. Jupiter's motion is no more than an effort to prescribe the order of Commission proceedings. This we cannot permit. Jupiter, if it so chooses, may refrain from filing any evidence in the proceeding. However, it cannot by its fiat unreasonably delay a proceeding which under the statute can only provide prospective relief to consumers. Accordingly, it is our conclusion that these cases proceed in accordance with the schedule set forth in our order issued February 3, 1965, and be continued as expeditiously as possible to decision by the presiding examiner on the complete record made therein.

The Commission orders:

The motion for continuance filed by Jupiter on February 8, 1965, hereby is denied, and the further proceedings herein shall proceed as hereinabove set out.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

DAYTON POWER AND LIGHT COMPANY, DOCKET NO. E–7200

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued February 15, 1965)

Dayton Power and Light Company (Applicant), a corporation organized under the laws of the State of Ohio, filed an application on December 30, 1964, for an order pursuant to Section 203 of the Federal Power Act, requesting authorization to acquire the entire electric facilities of the City of Bellefontaine, Ohio (Bellefontaine).

Applicant is engaged in the production, transmission, distribution and sale of electric energy in 24 counties in southwestern Ohio. It supplies electric energy at wholesale to 19 municipal systems and 5 rural cooperative systems and is also interconnected with The Cincinnati Gas & Electric Company, Columbus and Southern Ohio Electric Company, Ohio Edison Company, and Ohio Power Company.

Bellefontaine, a municipal corporation in the State of Ohio, has for a number of years operated an electric system serving the City and adjacent territory by which it engaged in the generation, purchase and distribution of electric energy. Bellefontaine's electric generation facilities include a 6,000 kw steam-electric generating plant and a 3,000 kw internal combustion electric generating plant. Bellefontaine's electric distribution facilities serve the following numbers of customers: residential, 4,027; commercial, 593; industrial, 24; and governmental, 73. Bellefontaine also owns and operates gas distribution facilities.

Bellefontaine's electric and gas facilities have been offered for sale through a public bid procedure, pursuant to the laws of the State of Ohio. On July 20, 1964, the Council of the City passed its Ordinance No. 3001 authorizing the advertisement for sale of the City's electric and gas facilities for not less than $5,128,200 to the highest and best bidder. The Ordinance was approved by the City's electors on November 3, 1964. The Applicant submitted the only bid for the facilities. This bid was for a total of $5,251,300, of which $3,574,949 was for electric facilities and $1,676,351 was for gas facilities. According to the application, the Applicant's bid was based on an appraisal of the facilities.

The Applicant requests authorization to purchase Bellefontaine's electric facilities for $3,574,949, plus an amount representing the net additions to such facilities from December 15, 1964, to date of transfer. Bellefontaine's electric plant has an estimated original cost of $3,298,000, and an estimated accrued provision for depreciation of $1,702,000, for estimated original cost depreciated of $1,596,000. This amount, plus $29,000 for materials and supplies, and less $65,000 for contributions in aid of construction, results in $1,560,000 for net assets to be acquired by the Applicant. The Applicant's consideration of $3,574,949 for the net assets of $1,560,000, will result in the creation of an Electric Plant Acquisition Adjustment of $2,014,949. The Applicant proposes to eliminate the entire amount of the Electric Plant Acquisition Adjustment by a debit to Miscellaneous Debits to Surplus.

Applicant represents that it will not have to construct any additional transmission facilities to integrate Bellefontaine properties into its own system operations. However, it does propose to construct some 12 kv distribution facilities to supplement the existing 4 kv facilities and to improve existing low voltage conditions in certain areas of the Bellefontaine system. Applicant also proposes to improve customer service by the use of its larger service force and by establishing a district business office and operation center in Bellefontaine to provide customer service on a 24 hour basis.

According to the application, the acquisition by Applicant of Bellefontaine's facilities will permit their consolidation into one integrated system with resultant economies and increased reliability. Applicant further represents that the rates for electric service which will be placed in effect in Bellefontaine will be Applicant's standard electric rates in effect in other communities served by Applicant and any existing customers who would not receive a reduction in rates as a result of the application of Applicant's standard electric rates may remain on Bellefontaine's existing rate for the term of the first rate ordinance which would be for five years.

Written notice of the application has been given to the Public Utilities Commission of Ohio and to the Governor of that State. Notice was also published in the Federal Register on January 7, 1965 (30 F.R. 175), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before Janua̲y 20, 1965, file petitions or protests with the Federal Power Commission, Washington, D.C., 20426. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued December 21, 1964, *Dayton Power and Light Company, Columbus and Southern Ohio Electric Company,* Docket No. E-7189 (32 FPC 1488).

(2) By the proposed transaction, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Bellefontaine, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Applicant, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

(4) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed acquisition by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted by this Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

IOWA SOUTHERN UTILITIES COMPANY, DOCKET NO. CP65-115

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 15, 1965)

On October 28, 1964, Iowa Southern Utilities Company (Applicant) filed in Docket No. CP65-115 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to establish physical connection of its natural gas transmission facilities with the distribution facilities proposed to be constructed by Applicant, and to sell and deliver natural gas to Applicant for distribution and resale in the community of Mount Ayr, Iowa, all as more fully set forth in the application.

The facilities proposed to be constructed by Applicant consist of approximately 10.9 miles of 3-inch lateral pipeline and a distribution system in the community of Mount Ayr, the County Seat of Ringgold County, Iowa, at an estimated cost of $361,436, which will be financed by internally generated funds.

On November 17, 1964, Michigan Wisconsin filed an answer to Applicant's request and stated that it has no objection to the granting of the application which also requests that 5.6 miles of lateral pipeline be constructed and operated by Michigan Wisconsin under its "ten cents formula," at an estimated cost of $117,000. Michigan Wisconsin will also construct and operate metering and regulating facilities.

The estimated volumes of natural gas to meet Applicant's annual and peak day requirements are as follows:

	First year	Second year	Third year
Annual (Mcf)	81,906	139,922	175,073
Peak day (Mcf)	792	1,357	1,699

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) Applicant, Iowa Southern Utilities Company, is a public utility duly organized and existing under the laws of the State of Delaware and is authorized to engage in the business of distributing and selling natural gas within the State of Iowa.

(3) It is necessary and desirable in the public interest that Michigan Wisconsin be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver to Applicant its daily and annual requirements as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Michigan Wisconsin within one year from the date of issuance of this order.

(5) The requirement that Michigan Wisconsin serve Applicant, as proposed, will not place any undue burden upon Michigan Wisconsin nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver to Applicant its maximum daily and annual requirements of natural gas as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Michigan Wisconsin within one year from the date of issuance of this order.

(C) Michigan Wisconsin shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

IOWA SOUTHERN UTILITIES COMPANY, DOCKET NO. CP65–139

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 15, 1965)

On November 16, 1964, Iowa Southern Utilities Company (Applicant) filed in Docket No. CP65–139 an application pursuant to Section 7(a) of the Natural Gas Act for an order directing Natural Gas Pipeline Company of America

(Natural) to establish physical connection of its transmission facilities with the proposed facilities of Applicant and to sell natural gas to it for resale and distribution in the community of Ainsworth, Iowa, all as more fully set forth in the application.

Applicant proposes to construct and operate 4.7 miles of 2⅜-inch pipeline between the point of interconnection and the distribution facilities in Ainsworth. Applicant will also construct and operate distribution facilities to provide the proposed service in the community of Ainsworth, Iowa. The estimated total cost of Applicant's facilities is $88,986, to be financed from funds on hand.

A franchise has been issued to Applicant by the municipality.

The application shows the estimated gas requirement for the third year of service will be 233 Mcf for peak day and 23,201 Mcf annually.

On December 11, 1964, Natural filed an answer to the subject application stating that it is willing to provide the proposed service and that it estimates the costs of the necessary tap and meter facilities, including 600 feet of pipe, to be $17,800.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

The Commission finds:

(1) Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) Applicant, Iowa Southern Utilities Company, is a public utility duly organized and existing under the laws of the State of Delaware and is authorized to engage in the business of distributing and selling natural gas within the State of Iowa.

(3) It is necessary and desirable in the public interest that Natural be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 233 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Natural within one year from the date of issuance of this order.

(5) The requirement that Natural serve Applicant, as proposed, will not place any undue burden upon Natural nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Natural Gas Pipeline Company of America be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 233 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application.

(B) Applicant shall be prepared to receive natural gas from Natural within one year from the date of issuance of this order.

(C) Natural shall report to the Commission in writing the date of commencement of service to Applicant within ten days therof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE JUPITER CORPORATION, DOCKET NO. RI63-212; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-58

ORDER DENYING PETITION FOR REHEARING

(Issued February 15, 1965)

On January 26, 1965, The Jupiter Corporation (Jupiter), filed a Petition for Rehearing in which it requests the Commission to reconsider and reverse its order issued January 18, 1965, 33 FPC 82, denying Jupiter's motion to terminate these proceedings. That motion, termed a "settlement", requested that merely on the basis of the allegations therein and on the application for a certificate of public convenience and necessity filed by Tennessee Gas Transmission Company in Docket No. CP65-58, we grant that certificate and at the same time moot the investigation of Jupiter's rates in Docket No. RP63-12.

As noted in our order, Jupiter's proposal would result in summary disposal of these proceedings without consideration of the evidence proposed by the Staff and would deny hearing to interveners and parties objecting to the proposal. We further noted that under the summary disposition urged by the motion we would be deprived of any opportunity to determine on the basis of record evidence whether the lease arrangement proposed in the certificate application would operate in a way which would have an adverse effect on consumers. Accordingly, we denied Jupiter's motion and directed that the hearing be expedited in accordance with the procedures theretofore prescribed.

In its Petition for Rehearing, Jupiter contends that we improperly denied its motion because we relied on two erroneous premises. First, that we assumed "the cases must go to full adversary hearing" because other parties raised opposing arguments to the motion. Second, that underlying our order there "seems to be the feeling" that the Commission cannot approve a settlement proposal if any party objects thereto.

As to its first "erroneous premise", Jupiter argues:

> This, of course, is contrary to the established rule of law that in consideration of a pretrial or prehearing motion which would be, if granted, dispositive of the proceedings, the allegations of pleadings before the forum, for purposes of ruling upon that motion only, are to be taken as true. Jupiter submits that taking the allegations of its Motion, and of the Answers of the Staff and Long Island, as true, the propriety of approval of Jupiter's motion is established.

Jupiter then repeats the allegations in its motion which it now contends are facts which must be taken as true and as such establish the propriety of approval of its motion. Further, while declaring that Staff's allegations must also be accepted as true for purposes of the motion, Jupiter attempts to brush them aside by arguing that those allegations are not facts but merely assumptions or matters relating to controlling law and Commission policy. Those allegations, however, include a factual contention that the rental fee under the lease which Jupiter urges us to approve would be excessive by about $970,000 annually when related to the rates reflected in the Staff cost of service.

We are not aware of any such "established rule of laws" as is urged by Jupiter in its petition. However, assuming the validity of such a rule of law, and without even implying that we are now reaching a determination in these proceedings, which determination, we repeat, can properly be reached only on a complete record made in hearing, we are of the view that based on the pleadings before us, Jupiter has not established the propriety of approval of its motion. Clearly we could not approve without hearing any lease by Tennessee which might involve such an excessive charge, unless Tennessee were willing to agree to condition the certificate upon its deduction from cost of service in any rate case the amount we would determine to be excessive. Tennessee has given no indication it would agree to any such arrangement.

Jupiter's assignment of error to our order on its claimed "second erroneous premise" is likewise incorrect and without basis. In effect, Jupiter there contends that we should not have given any consideration to the objections to the motion filed by Long Island Lighting Company, an intervener in the proceedings, in our denial of that motion. In support thereof, Jupiter cites a number of cases in which we approved settlements of rate proceedings over objections of certain parties. Those cases are inapposite. None of those cases involved an application for a certificate of public convenience and necessity under Section 7 of the Natural Gas Act pursuant to which a hearing on the application is mandatory. Further, it is clear from our order issued January 18, 1965, that our basic concern was the absence of record evidence on which we could make the findings required by Section 7 of the Act. The need for hearing and evidence is in fact more acute by reason of the objections of an interested intervener.

We conclude that Jupiter has presented no facts or points of law in its Petition for Rehearing which warrants reversal of our order issued January 18, 1965, or granting of its motion. To the extent that Jupiter in this petition purports to reply to answers by various parties to numerous other documents filed by Jupiter in these proceedings, such reply is not germane to the Petition for Rehearing and will be considered in reference to the appropriate filing.

The Commission orders:

The Petition for Rehearing filed by Jupiter on January 26, 1965 hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP65-167

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 15, 1965)

On December 10, 1964, Transwestern Pipeline Company (Applicant), filed in Docket No. CP65-167 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to Great Plains Gas Company (Great Plains) and the installation and operation of facilities related thereto, all as more fully set forth in the application.

Applicant seeks authorization to sell natural gas to Great Plains pursuant to an agreement between the parties dated November 9, 1964, which provides for sales to Great Plains for resale to right-of-way customers in the Texas and Oklahoma Panhandle area in which Applicant has pipeline facilities. Applicant proposes to install and operate such additional pipeline tap valves as may be required to render service to Great Plains at points on Applicant's existing pipeline system in certain counties in Texas and Oklahoma. Great Plains will reimburse Applicant for material and installation costs required to make such sales.

Applicant was granted permanent authorization by the Commission on April 6, 1964, 31 FPC 878, in Docket No. CP64–148, to render service to Great Plains Gas Company in Dallam, Sherman, Hansford, Ochiltree, Lipscomb, Moore, Hutchinson and Hemphill Counties, Texas. No increase in authorized maximum daily or annual volumes is requested in the subject application, since sales volumes to Great Plains previously authorized were the total volumes for both Texas and Oklahoma customers, but were not so identified at that time.

A temporary certificate authorizing the subject sale and facilities was issued to Applicant on December 31, 1964.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 12, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued October 10, 1963 in Docket No. CP63–290 (30 FPC 997).

(2) The proposed installation and operation of facilities and sale of natural gas by Applicant, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed installation and operation of facilities and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant authorizing the installation and operation of facilities and the sale of up to 1,675 Mcf daily and 612,000 Mcf annually of natural gas by Applicant to Great Plains Gas Company as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

(D) Applicant shall (1) not sell and deliver to Great Plains Gas Company volumes of natural gas in excess of 1,675 Mcf daily and 612,000 Mcf annually and (2) file an annual report with the Commission showing the number, size, and cost of taps placed in operation, together with a report of annual volumes delivered at each tap.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-75

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT

(Issued February 15, 1965)

On September 16, 1964, United Gas Pipe Line Company (Applicant), filed in Docket No. CP65-75 an application, as supplemented on November 4, 1964, pursuant to Section 7 of the Natural Gas Act for (1) a certificate of public convenience and necessity authorizing the continued operation of transmission pipeline facilities near Eucutta, Lumberton and Lucedale, Mississippi, and the transportation of natural gas to Hess Pipe Line Company's (Hess) oil pump stations, and (2) permission to abandon certain other facilities located in Forrest, Perry and George Counties, Mississippi, and in Mobile County, Alabama, all as more fully set forth in the application and supplement.

Applicant proposes to continue the operation of approximately 8.3 miles of 2 to 6-inch pipeline and other related facilities, and supply the firm fuel requirements of Hess for the operation of oil pump stations of Hess located at Eucutta, Lumberton, and Lucedale, Mississippi, served by United since 1951. Total estimated peak day and annual requirements for the three pump stations are 1,800 Mcf and 343,000 Mcf, respectively.

Applicant further proposes to remove and abandon a total of approximately 4.7 miles of 2-inch pipeline and other related facilities originally installed to serve eight heater stations of Hess. The proposed abandonment is the result of the cancellation of Applicant's contract with the Hess company, effective December 19, 1963, which has not purchased any gas from United for use in these heaters since 1960. Hess has consented to the contract cancellation.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 12, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement thereto, and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The proposed operation of facilities and transportation and delivery of natural gas to Hess as hereinbefore described, and as more fully described in the application, supplement, and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed operation of facilities and transportation and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application and supplement herein, are used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the operation of facilities and transportation and delivery of natural gas to Hess Pipe Line Company, as more fully described in the application, supplement and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are hereby granted to Applicant, United Gas Pipe Line Company.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities and service as authorized in paragraph (A) above within ten days of such abandonment.

(E) The certificate issued by paragraph (A) above shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any further increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED STATES DEPARTMENT OF THE INTERIOR, SOUTHWESTERN POWER ADMINISTRATION, DOCKET NO. E-7172

ORDER CONFIRMING AND APPROVING RATES FOR SALE OF ELECTRIC POWER AND ENERGY

(Issued February 15, 1965)

The Secretary of the Interior, acting on behalf of the Southwestern Power Administration (SWPA) and pursuant to Section 5 of the Flood Control Act of 1944 (58 Stat. 887), on June 30, 1964, filed a request for the extension of the

Commission's confirmation and approval of rate schedules and contractual rates and charges applicable to the integrated system of SWPA as follows:

Rate schedules	Expiration date of Commission approval	Requested extension date
IC and EE	Aug. 9, 1964	July 1, 1969
P-1	Aug. 9, 1964	Mar. 1, 1965
P-2	July 1, 1967	July 1, 1969
Contractual rates and charges—Contained in the following contracts with SWPA:		
Texas Power & Light Co. (Contract Ispa-177)	Sept. 11, 1964	July 1, 1969
Southwestern Electric Power Co. (Contract 14-02-001-782)	Nov. 18, 1964	July 1, 1969
Oklahoma Gas & Electric Co. and Public Service Co. of Oklahoma (Contract Ispa-356)	Aug. 9, 1964	July 1, 1969

In addition, the Secretary requested confirmation and approval for a period from August 9, 1964 to July 1, 1969 of proposed new Rate Schedule F-2, to replace existing Rate Schedule F-1. On July 29, 1964, the Secretary amended his request of June 30, 1964 to request approval of revised proposed Rate Schedule F-2 and extension of approval of Rate Schedule F-1, both for a period ending June 30, 1969.

By orders issued August 7 and December 31, 1964, 32 FPC 562, 1560, the Commission extended the confirmation and approval of Rate Schedules IC, EE, P-1, and F-1 and the above contractual rates and charges to February 15, 1965.

SWPA is an agency of the United States established in the Department of the Interior to execute the purposes of the Flood Control Act of 1944 with respect to the disposition of electric power and energy made available to the Secretary of the Interior from the reservoir projects under control of the Department of the Army in the area comprising all of Arkansas and Louisiana and portions of Missouri, Kansas, Texas and Oklahoma. Currently SWPA markets power from eleven hydroelectric projects constructed by the Corps of Engineers. Nine of these projects with a total installed capacity of 1,020,000 kw are operated as a part of SWPA's Interconnected System. SWPA expects to be marketing the power from ten additional Corps projects by 1972, nine of which would be a part of the Interconnected System.

Power is delivered to customers of SWPA over SWPA-owned and SWPA-leased transmission facilities, and through wheeling arrangements. All power is sold under applicable rate schedules or through special contracts.

The rate schedules and rates and charges for which approval is being requested affect only the Interconnected System and are briefly described as follows:

Rate Schedule F-1—Wholesale Firm Power Service. Demand charge: $1.60 per kw of monthly billing demand. Energy charges: 2 mills per kwh for the first 150 kwh per kw of billing demand, 3 mills per kwh for the next 290 kwh per kw of billing demand, and 5 mills per kwh for energy in excess of 440 kwh per kw of billing demand.

Provision is made for discounts of 10¢ and 40¢ per kw of billing demand where, under specified conditions, the customer provides respectively, (a) transformation and substation facilities, and (b) transmission facilities. Under this rate schedule, SWPA supplies the customer's total requirements except, where a customer utilizes an auxiliary source of power, the energy supplied may be limited in each billing period to an amount proportionate to the ratio of the customer's contract demand and its annual maximum power requirement, and the use of such energy shall generally parallel the normal load patterns of the customer's system load.

Proposed Rate Schedule F–2—Wholesale Firm Power Service. (a) From SWPA Grid:—Demand charge: $1.50 per kw of monthly billing demand, including the use of 200 kwh per kw per month. Energy charge: 4 mills per kwh for all energy in excess of 200 kwh per kw of billing demand per month. Rates apply to firm power service received by a customer at 138 kv or 161 kv at a federally-owned hydroelectric dam, or at 138 kv or 161 kv from transmission lines owned or leased by SWPA, or at 69 kv from a 138/69 kv or 161/69 kv substation located at 138 kv or 161 kv transmission lines owned or leased by SWPA. (b) Other Firm Power Service:—Demand charge: $1.90 per kw of monthly billing demand, including the use of 200 kwh per kw per month. Energy charge: 4 mills per kwh for all energy in excess of 200 kwh per kw of billing demand per month.

Rate Schedule P–1—Wholesale Peaking Power Service. Demand charge: $1.60 per kw of monthly billing demand. Energy charge: 2 mills per kwh for the first 150 kwh per kw of monthly billing demand and 3 mills per kwh for the next 50 kwh per kw of billing demand.

Energy associated with peaking power is available in the amount of 1,800 kwh per kw of contract demand during each fiscal year beginning July 1 of each year, except that an additional amount up to 2,400 kwh per year may be made available where the customer can demonstrate need therefore.

The energy charges are applied so that notwithstanding monthly variations in the delivery of energy permitted by contract, the energy charge shall be 2 mills per kwh for the first 1,800 kwh per kw of contract demand per fiscal year and 3 mills per kwh of energy in excess of 1,800 kwh per kw of contract demand per fiscal year. Also, provision is made for the same discounts on demand charges as those available under Rate Schedule F–1. It is requested that approval be extended to March 1, 1965, at which time the rate schedule will be allowed to expire.

Rate Schedule P–2—Wholesale Hydro Peaking Power Service and Seasonal Peaking Power Service. Demand charge: $14.40 per kw-year of hydro peaking power and/or seasonal peaking power, payable at the rate of $1.20 per kw-month. Energy charge: 2 mills per kwh.

This schedule is for the sale of hydro peaking and seasonal peaking power from SWPA's main transmission grid. It provides for delivery of power at the voltage of 138 kv or 161 kv from transmission systems owned or available to SWPA, or at lower or intermediate voltage from substations directly connected to such transmission systems. The minimum amount of energy associated with service under this rate schedule is 1,200 kwh per kw of demand during each contract year.

The Commission has heretofore approved this rate schedule until July 1, 1967 and it is requested that the approval be extended at this time to July 1, 1969, at which time the other rates for SWPA would be up for review and approval.

Rate Schedule IC—Wholesale Interruptible Capacity. Demand charge: 4.5¢ per kw per day of interruptible capacity. Energy charge: 2 mills per kwh, or returned by customer as scheduled by the Government.

Rate Schedule EE—Wholesale Excess Energy. Energy charge: 1.5 mills per kwh of excess energy.

The charges under Rate Schedules F–1 and F–2 would be the same at monthly load factors of 20, 48, and 73 percent. At load factors between 20 and 48 percent and in excess of 73 percent the charges would be less under Rate Schedule F–2. At all other load factors the charges would be higher under the F–2 schedule. There would be one other significant difference. Under the proposed F–2 schedule, SWPA could establish minimum and/or maximum amounts of energy for delivery to customers which utilize an auxiliary source of power supply in conjunction with firm power purchased from SWPA. The F–1 schedule permits setting only maximum limits on energy deliveries.

Western Farmers Electric Cooperative protested to the Commission the proposed substitution of Rate Schedule F–2 for Rate Schedule F–1. Also, other customers advised SWPA of their preference to continue purchasing power under Rate Schedule F–1 rather than F–2. After considering these views, Interior amended its initial application to include a request for extended approval of Rate Schedule F–1, but continued the request for approval of the proposed new Rate Schedule F–2. As now proposed, existing and new firm power customers would be billed for firm power under Rate Schedule F–1. Thereafter the customer would have the option, at any time, upon at least 30 days advance written notice to elect to take firm power service under Rate Schedule F–2. Upon exercising this option the customer could not revert to purchasing power under Rate Schedule F–1.

We believe the initial proposal to substitute Rate Schedule F–2 for Schedule F–1 has merit. We do not think it would be desirable, however, to approve both of these rate schedules. The effect of approving both schedules would be to reduce rates to those customers who would find it advantageous to change to the F–2 schedule. We believe, therefore, that the proposed F–2 schedule should not be approved while the F–1 schedule is still effective.

Contractual Rates and Charges

Texas Power and Light Company (*Contract Ispa–177*). This contract between SWPA and the Texas Power & Light Company (TP&L), which expires July 1, 1977, provides for the Company to purchase from SWPA the capacity of one 35,000-kilowatt unit at the Denison project, plus 70 million kilowatt-hours of primary energy and one-half the secondary energy generated at the project each year. TP&L pays $1.20 per kw per month for the 35,000 kw of contract demand but is credited at the rate of $0.045 per kw per day for each kilowatt of contract demand scheduled but not delivered. Capacity purchased in excess of contract demand is billed also at the rate of $0.045 per kw per day. The energy charge is 2.0 mills per kwh for primary energy and 1.5 mills per kwh for secondary energy.

The contract also provides for SWPA to purchase power from TP&L for resale to preference customers of SWPA presently receiving service from the Company's system. SWPA compensates TP&L for the capacity and energy it transmits to the preference customers at a monthly rate of $1.60 per kw for capacity plus 2.0 mills per kwh for the first 150 kwh per kw of demand, 3.0 mills per kwh for the next 215 kwh per kw, and 5.0 mills per kwh per kw for each kwh in excess of 365 kwh. This rate is the same as SWPA's Rate Schedule F–1 for load factors up to 50 percent but is slightly higher for higher load factors.

SWPA sells the power and energy delivered by TP&L to preference customers under provisions of Rate Schedule F–1. Under this marketing arrangement SWPA pays TP&L approximately two percent, or $24,000 per year, in excess of the revenue which it receives from resale of the power to its preference customers.

Southwestern Electric Power Company (*Contract 14–02–001–782*). This contract between SWPA and Southwestern Electric Power Company (Southwestern), which expires July 1, 1976, provides for SWPA to supply peaking capacity and energy and excess hydroelectric energy to Southwestern, and for the latter to supply the total requirements of those customers (only one at this time with a demand of about 3,000 kw) of SWPA which are served through facilities of Southwestern. For each kilowatt of demand of SWPA's customers supplied by Southwestern, SWPA delivers to the Company two kilowatts of peaking capacity and 1,800 kwh per kw per year of primary energy.

Southwestern pays the Government $1.20 per kw-month for capacity, 2.0 mills per kwh for primary energy, and 1.5 mills per kwh for excess energy. The Government pays Southwestern $1.65 per kw-month for capacity delivered to SWPA's customers plus 3 mills per kwh for energy, subject to a fuel cost adjustment. At 50 percent load factor this rate averages 7.52 mills per kwh. In turn SWPA's customers pay the Government for delivered power and energy in accordance with provisions of Rate Schedule F-1, which rate is equivalent to 6.97 mills per kwh at 50 percent load factor.

Under this marketing arrangement SWPA pays Southwestern about eight percent, or $8,500 per year, in excess of the revenue which it receives from resale for the power to its preference customers.

Oklahoma Gas and Electric Company and Public Service Company of Oklahoma (Contract Ispa-356). This contract between SWPA and the Oklahoma Companies, which expires July 1, 1977, provides for SWPA to supply peaking capacity and energy to the Companies and for the Companies to supply the total power and energy requirements of those customers of SWPA that are served through the facilities of the Companies. For each kilowatt of demand of SWPA's customers supplied by the Companies, SWPA delivers to the Companies 1.65 kilowatts of peaking capacity and 1,800 kwh per kw per year of primary energy. In addition, the Oklahoma Companies may purchase excess capacity, with or without additional energy, and excess hydroelectric energy.

The Oklahoma Companies pay the Government $1.20 per kw-month for capacity, plus 2.0 mills per kwh for primary energy, and 1.5 mills per kwh for excess energy. For excess capacity with or without energy, the Companies pay $0.045 per kw-day for each kw scheduled and received in excess of the contract demand of the Companies. Energy associated with excess capacity costs 2.0 mills per kwh.

The Government pays the Oklahoma Companies $1.60 per kw-month for capacity delivered to SWPA's customers plus 3.5 mills per kwh for energy. At 50 percent load factor payments for capacity and associated energy average 7.88 mills per kwh. The Government may also purchase off-peak energy from the Companies for 3.65 mills per kwh.

Preference customers pay the Government for delivered power and energy in accordance with provisions of Rate Schedule F-1 (6.97 mills per kwh at 50 percent load factor).

SWPA is currently selling about 135,000 kilowatts of peaking power to the Oklahoma Companies and sales are expected to increase to 247,000 kilowatts by 1972. Based on the present level of sales under this marketing arrangement, SWPA pays the Oklahoma Companies about 14 percent, or $350,000 per year, in excess of the revenue which it receives from resale of the power to preference customers. This difference would increase as power sales increase.

The contractual arrangements with the Texas, Southwestern, and Oklahoma Companies were made to enable SWPA to market power to preference customers at system load factors. All sales to the companies are made at SWPA's standard rates for peaking power. In each case SWPA purchases power from the companies for resale to preference customers, and in each case SWPA's payments for power it purchases are greater than the revenues it receives from resale of the power to preference customers. Based on the present level of sales, this difference amounts to about $382,500 annually. Southwestern and the Oklahoma Companies have filed the contracts mentioned above pursuant to the rate schedule filing requirements of Section 205 of the Federal Power Act, and the Commission has accepted them for filing. The staff is now investigating the charges paid by SWPA under these contracts. TP&L has not filed Contract Ispa–177 because, the Company contends, in letters dated February 26 and May 11, 1964, it is not a public utility, within the meaning of the Federal Power Act.

Repayment Study

In support of the rate schedules and contractual rates and charges previously discussed, Interior has filed SWPA's "Average Rate and Repayment Study, February 1964 (Revised Final)." This study purports to show that revenues resulting from the sale of power and energy at existing rates will amortize the capital investment allocated to power in fiscal year 2015, forty-three years after the last unit in a proposed expanded Interconnected System is assumed to be in operation.

The amortization policy adopted in SWPA's study is similar to that used for systems of the Bonneville Power Administration and Southeastern Power Administration. For rate and repayment purpose, the capital investment in power facilities of an individual project is amortized 50 years after it becomes operable but subsequent revenues created by the sale of power continued to be produced at the project are applied to the amortization of the investment in power facilities at projects with later in-service dates.

Nine hydroelectric projects of the Corps of Engineers, having a total installed capacity of 1,020,000 kw, are operated as a part of SWPA's Interconnected System. The first project began operations in 1944 and the last two, with a total capacity of 186,000 kw, have been operating for only a few months. Seven additional projects are under construction. They will add 629,200 kw to the Interconnected System during the period 1965–1970. SWPA has included two additional projects in its repayment study. These are the authorized 76,400 kw Kaysinger Bluff project and the 500,000 kw Petit Jean project which is now being studied by the Corps of Engineers but not as yet authorized by Congress. The total capacity of all these projects is 2,225,600 kw. In addition, SWPA has contracted for 183,100 kw of thermal capacity in G&T Cooperative and municipal plants.

SWPA markets power from its own transmission facilities and through contractual arrangements with others. It sells both peaking power and system load factor power. Most peaking power is sold from the main 161-kv grid at a rate of 1.20 per kw per month for capacity plus 2.0 mills per kwh for energy. This rate is nearly equal to the estimated cost of power from large new privately financed steam-electric plants being constructed in the area. System load factor power is delivered to preference customers and sold at a rate of $1.60 per kw per month plus a block energy rate which amounts to about 2.6 mills per kwh at 50 percent load factor. This computes to an overall charge of about 7.0 mills per kilowatt-hour. Many cooperatives in the area pay about the same rate for power purchased from private utilities, although some in Arkansas pay substantially less. Most municipal systems pay higher rates for purchases from the private utility systems.

SWPA's revenues have fallen far short of meeting repayment requirements. From its inception through fiscal year 1964, net revenues have failed by some $34 million of paying interest charges on the Federal investment in generating and transmission facilities. In fiscal year 1964 gross revenues totaled $17.7 million. Operating expenses totaled $15.6 million, so only $2.1 million of net revenues were available to pay interest charges on the investment and to amortize investment costs. Since interest charges amounted to about $6.8 million, the investment to be repaid actually increased $4.7 million during the year. The operating expenses of $15.6 million comprise the following: $1.9 million for operation, maintenance, and replacement costs at system hydroelectric projects; $6.8 million for power purchased by SWPA; $5.2 million for transmission and service charges paid to Associated Electric Cooperative and Western Farmers Electric Cooperative: and 1.7 million for operation and maintenance of SWPA's transmission facilities and for costs of administration.

Interior's repayment study forecasts that beginning in fiscal year 1965, and in each year thereafter, gross revenues will be sufficient to pay all operating expenses and interest charges and provide varying amounts for amortization of investment costs. It indicates that all investment costs would be repaid by the year 2015, or 43 years following the in-service date of the proposed Petit Jean project.

There are many factors which could alter Interior's optimistic outlook. The Petit Jean project may not be authorized for Federal construction, all of the power from future projects may not be fully marketable as assumed, water available for hydroelectric generation may be less than estimated, and future marketing expenses may be higher than estimated. There is no doubt, however, that with the many new projects being added to the system, and if prudent marketing practices are followed, marked improvement in SWPA's financial condition can be obtained. During the period 1964 to 1972, SWPA forecasts that its annual operating expenses will increase from $15.6 million to about $22 million, but that annual gross revenues will increase from $17.7 million to $49 million.

Our review indicates that in general the level of rates in SWPA's rate schedules and power sales contracts is reasonable for SWPA's operation, but that SWPA has incurred excessive contractual costs in marketing the hydroelectric power. In addition to the three contracts mentioned above there are two contracts in which SWPA may be making excessive payments for power purchases or transmission and service charges, namely, the contract with Associated Electric Cooperative, Inc., and the one with Western Farmers Electric Cooperative.

Associated Electric Cooperative, Inc.

This contract between SWPA and Associated became effective August 1, 1962 and extends through May 31, 2000. It supersedes long term contracts with the six G&T cooperatives which comprise Associated. The contract provides for the sale of 288,000 kw of capacity and 345.6 million kwh of firm energy annually, for which annual revenues would total $4,838,400. In addition, sales of secondary energy at 2.0 mills per kwh are expected to average 573 million kwh annually, and thus provide additional average annual revenues of $1,146,000. The contract obligates SWPA to make annual payments of $4,701,300 (reducing to $3,688,300 beginning in fiscal year 1997) to Associated for various transmission and other services.

The Commission's order of April 30, 1962 in Docket No. E-6975, 27 FPC 895, approving SWPA's Rate Schedule P-2, discusses the Associated contract as proposed at that time and notes that it would be subject to the rate schedule filing requirements of Section 205 of the Federal Power Act to the extent that the facilities utilized to render services to SWPA are subject to the jurisdiction of the Commission. The question of the Commission's jurisdiction over REA cooperatives is under consideration in Docket No. E-7113, Dairyland Power Cooperative, et al. The Commission by its order of August 6, 1964, 32 FPC 529, directed the examiner to defer issuing his initial decision in this proceeding until January 1, 1966. Therefore, any further consideration of the Associated contract under Section 205 of the Federal Power Act would be deferred until sometime after January 1, 1966. This does not foreclose the consideration by the Commission under the Flood Control Act of 1944 of the charges for services by Associated to the extent that they may properly be considered as offsets to the rates charged Associated by SWPA. Such offsets would be to the rates in Rate Schedule P-2, and this schedule has been approved by the Commission to July 1, 1967.

Western Farmers Electric Cooperative

Southwestern Power Administration has two interrelated contracts with Western Farmers Electric Cooperative (Western) under which SWPA makes power sales to Western and to other preference customers through use of Western's transmission facilities. These contracts became effective July 1, 1957 and terminate July 1, 1995. The contracts obligate SWPA to make annual payments to Western for transmission service charges ranging from in excess of $1,000,000 initially down to $316,000 in fiscal year 1982 and thereafter. The payment in fiscal year 1964 was $908,000. In that year SWPA sold 30,000 kilowatts of peaking power to Western and 500 kilowatts of system load factor power to Altus Air Force Base through use of Western's transmission facilities. The total revenue from these sales was $698,700. Thus, SWPA netted minus $209,300 for transactions under this contract in fiscal year 1964. This is exclusive of 31,000 kilowatts of thermal capacity which SWPA purchases from Western at $1.60 per kw per month plus 2 mills per kwh.

Power sales under this contract are expected to increase considerably. By 1972, annual sales are expected to produce revenue of $2,096,600. The annual service charge at that time will be $604,000, so an annual net revenue of $1,492,600 is anticipated.

The jurisdictional problem and the question of offsets is the same here as with Associated Electric Cooperative, Inc. Although sales to Western Farmers have been made under Rate Schedule P-1, this schedule is being discontinued and future sales will be made under Rate Schedule P-2.

Thus, a primary cause of SWPA's financial plight is the substantial payments it makes under its contract with Associated Electric Cooperative, Inc., and Western Farmers Electric Cooperative. In view of the jurisdictional problem, it is not possible at this time to investigate these charges pursuant to authority of the Federal Power Act as was contemplated in the Commission's order of April 30, 1962, approving SWPA's Rate Schedule P-2. As an alternative, an investigation of the charges by Associated and Western could be made to determine the extent to which they might properly be considered as offsets to the sales made by SWPA under Rate Schedule P-2. This schedule has, however, already been approved to July 1, 1967.

The Commission's staff is investigating charges to SWPA made under contracts with Southwestern Electric Power Company and the Oklahoma Companies. A similar investigation of charges by Texas Power & Light Company should be made if and when FPC jurisdiction is established. Any reductions in the charges to SWPA under these contracts would be relatively small, however, and would not substantially improve SWPA's financial condition.

In view of the uncertainties still existing in regard to SWPA's ability to repay investment costs within the normal 50-year repayment period, we believe it advisable to limit approval of the rate schedules and the contractual rates and charges to a period ending June 30, 1967, the date that the Commission's approval of Rate Schedule P-2 expires, rather than to extend approval to June 30, 1969, as requested.

Furthermore, we believe it is inadvisable, as noted above, to approve proposed new Rate Schedule F-2 at this time while Rate Schedule F-1 is still in effect.

The Commission finds:

The continued approval of SWPA's Rate Schedules F-1, IC and EE and the contractual rates and charges in the contracts between SWPA and Texas Power

& Light Company (Contract Ispa–177), Southwestern Electric Power Company (Contract 14–02—001–782) and Oklahoma Gas & Electric Company and Public Service Co. of Oklahoma (Contract Ispa–356) for a period beginning February 15, 1965 and expiring June 30, 1967 and the continued approval of Rate Schedule P–1 for a period from February 15, 1965 to March 1, 1965, is not inconsistent with the purposes of the Flood Control Act of 1944.

The Commission orders:

(A) SWPA Rate Schedules F–1, IC and EE, and the contractual rates and charges in the contracts between SWPA and Texas Power & Light Company (Contract Ispa–177), Southwestern Electric Power Company (Contract 14–02—001–782) and Oklahoma Gas & Electric Company and Public Service Co. of Oklahoma (Contract Ispa–356) are hereby confirmed and approved for a period extending from February 15, 1965 to July 1, 1967.

(B) The confirmation and approval of SWPA Rate Schedule P–1 is extended from February 15, 1965 to March 1, 1965.

(C) The request for confirmation and approval of the proposed SWPA Rate Schedule F–2 is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

VILLAGE OF KARNAK, ILLINOIS, DOCKET NO. CP65–95

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 16, 1965)

On October 9, 1964, the Village of Karnak, Illinois (Applicant) filed in Docket No. CP65–95 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Trunkline Gas Company (Trunkline) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in said village and environs, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct and operate a municipally owned natural gas distribution system within its borders and approximately 5.35 miles of 2-inch lateral transmission line extending easterly from its city gate to a proposed interconnection with Trunkline's main transmission system in Massac County, Illinois.

Applicant's estimated third year peak day and annual natural gas requirements are 365 Mcf and 28,730 Mcf, respectively.

The total estimated cost of the proposed project is $143,000, which cost will be financed by the issuance of gas public utility certificates.

On November 16, 1964, Trunkline filed an answer to the application herein stating that it had no objection to the issuance of the order requested by Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December 18, 1964 (29 F.R. 18025). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the

meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(2) Applicant, the Village of Karnak, Illinois, is a municipal corporation incorporated under the laws of the State of Illinois and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in said village.

(3) It is necessary and desirable in the public interest that Trunkline be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 365 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive gas from Trunkline, as proposed, within nine months from the date on which this order issues.

(5) The requirement that Trunkline serve Applicant, as proposed, will not place any undue burden upon Trunkline nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Trunkline Gas Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 365 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application.

(B) Trunkline shall report to the Commission in writing the date of commencement of service to Applicant, within ten days of such date.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Trunkline, as proposed, within nine months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. G–14872

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 16, 1965)

On August 12, 1963, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. G–14872 an application to further amend the order of the Commission issued October 27, 1958, 20 FPC 551, as amended by orders issued April 27, 1959, 21 FPC 583, April 21, 1960, 23 FPC 618, and December 2, 1960, 24 FPC 1054, in Docket No. G–14872, authorizing among other things the construction and operation of additional natural gas facilities in the Herscher Storage Field, Kankakee County, Illinois, for the purpose of testing the Mt. Simon formation as a storage reservoir.

The application to amend filed on August 12, 1963, seeks the deletion of (1) Ordering Paragraph (B)(1), which limited the maximum storage inventory in zones 3 and 4 of the Eau Clair-Mt. Simon formations to 5 billion cubic feet of natural gas (increased by amending orders issued April 27, 1959, April 21, 1960 and December 2, 1960, and by order issued May 26, 1964, in Docket No. CP64–113 to a currently effective inventory volume of 45 billion cubic feet), and (2) Ordering Paragraph (B)(2) requiring Applicant to submit monthly reports of all pertinent data relating to the Eau Clair-Mt. Simon formation in the Herscher Storage Field in Kankakee County, Illinois, all as more fully set forth in the said application to amend.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on October 29, 1963 (28 F.R. 41520). No petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued October 27, 1958, in Docket No. G–14872, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued October 27, 1958, in Docket No. G–14872, be and the same is hereby further amended so as to modify the provisions of Ordering Paragraph (B)(2) thereof and (1) increase the limitation on the maximum storage inventory in zones 3 and 4 of the Eau Clair-Mt. Simon formations to 45 billion cubic feet, and (2) modify the ordering provisions thereof relating to monthly reports so as to require the Applicant to make semi-annual reports consistent with the order of the Commission relating to reservoir reports prescribed by the Commission in its order issued November 20, 1958, in Docket No. G–15328, 20 FPC 735.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65–147

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 16, 1965)

On November 20, 1964, Northern Natural Gas Company (Applicant) filed in Docket No. CP65–147, an application pursuant to Section 7(c) of the Natural Gas Act, for a certificate of public convenience and necessity authorizing the transportation of natural gas on a firm basis to the Clinton Engines Corporation (Clinton Engines) at Maquoketa, Iowa, and the John Deere Dubuque Tractor Works of Deere & Company (John Deere) at Dubuque, Iowa, presently served on an interruptible basis, all as more fully set forth in the application.

Applicant proposes to transport and deliver through its Peoples Division to (1) the Clinton Engines plant at Maquoketa, Iowa, 450 Mcf of natural gas daily on a firm basis, and (2) the John Deere plant at Dubuque, Iowa, 500 Mcf of natural gas daily on a firm basis. The volumes of natural gas to be delivered are within People's existing contract demand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 12, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The proposed transportation and delivery of natural gas by Applicant to Clinton Engines and John Deere, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed transportation and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the transportation and delivery of natural gas to Clinton Engines and John Deere as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued hereby shall not entitle the industrial customers to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PLAINS GAS FARMERS' CO-OPERATIVE SOCIETY OF HEREFORD, TEXAS, DOCKET NO. CP65–163

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 16, 1965)

On December 7, 1964, as supplemented on January 25, 1965, the Plains Gas Farmers' Co-operative Society of Hereford, Texas (Applicant) filed in Docket No. CP65–163 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Transwestern Pipeline Company (Transwestern) to establish physical connections of its natural gas transmission system with the existing facilities of the Applicant at four points in Parmer County, Texas, and to sell and deliver natural gas to Applicant for resale to its members for their consumption in domestic and agricultural uses, all as more fully described in the application.

The application states that at the present time Applicant is supplied with natural gas by Pioneer Natural Gas Company (Pioneer). Applicant further states that Pioneer has, over a period of twelve years, increased its rates to the extent that the present authorization will result in a saving to its members of $20,000 per year.

The total cost of the 4 taps and other equipment and facilities including meters and regulators is estimated at $16,500, which said costs will be borne by the Applicant.

The estimated volume of gas required by Applicant is 196,200 Mcf per year and the peak month volume is 36,130 Mcf for gas service during May when pumping for irrigation is at its highest point.

On December 28, 1964, Transwestern filed an answer to the application herein stating that it had no objection to the issuance of the order requested by Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December 19, 1964 (29 F.R. 18106). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G–14871, *et al.* (22 FPC 391).

(2) Applicant, Plains Gas Farmers' Co-operative Society of Hereford, Texas, is a non-profit corporation under the laws of the State of Texas. One of the primary purposes of the said co-operative, as provided by its articles of incorporation (Article Four) is to secure natural gas for the membership to be used for irrigation and domestic purposes.

(3) It is necessary and desirable in the public interest that Transwestern be directed to established physical connections of its gas transmission system with the existing facilities of Applicant and to sell and deliver up to 36,130 Mcf of natural gas per month to Applicant as set forth in the application.

(4) The requirement that Transwestern serve Applicant, as proposed, will not place any undue burden upon Transwestern nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Transwestern Pipeline Company be and it is hereby directed to establish four connections of its natural gas transmission system with the transmission systems of the Applicant's members in Parmer County, Texas, and to sell and deliver natural gas in volumes of up to 36,130 Mcf per month, all as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Transwestern within six months from the date of issuance of this order.

(C) Transwestern shall report to the Commission in writing the date of the commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP65–192

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 16, 1965)

On December 28, 1964, Transwestern Pipeline Company (Applicant), Houston, Texas, filed in Docket No. CP65–192 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity, authorizing the installation and operation of certain natural gas facilities, all as more fully set forth in the application on file with the Commission.

Applicant proposes to install tap valves, measuring equipment, and appurtenant facilities for the short-term sale of such volumes of natural gas as Cabot Corporation (Cabot), the purchaser, may require and Applicant may have available for delivery, up to 30,000 Mcf per day for a period ending March 1, 1965, or one month later if extended by mutual agreement of the parties.

The estimated cost of Applicant's proposed construction is $3,000, and will be borne by Cabot.

Temporary authorization for the installation and operation of the facilities requested has been granted by Commission letter issued January 15, 1965.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 12, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 10, 1959, in Docket No. G–14871, *et al.*, (22 FPC 391).

(2) The proposed construction and operation of facilities and delivery of natural gas by Applicant to Cabot as hereinbefore described, and as more fully described in the application and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and delivery of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation and delivery of natural gas to Cabot for the period ending not later than April 1, 1965, as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CAROLINA POWER & LIGHT COMPANY AND DUKE POWER COMPANY, DOCKET NO. E-7192

ORDER AUTHORIZING SALE OF FACILITIES

(Issued February 17, 1965)

Carolina Power & Light Company (Carolina) and Duke Power Company (Duke), filed a joint application on November 23, 1964, for an order pursuant to Section 203 of the Federal Power Act authorizing Carolina to sell and Duke to acquire certain electric transmission facilities.

Carolina is a corporation organized under the laws of North Carolina and qualified to do business within the State of North Carolina and South Carolina with its principal business office in Raleigh, North Carolina. Carolina is engaged in the generation, transmission, distribution and sale to the public of electric energy as a public service company or public utility in 55 counties in North Carolina and 13 counties in South Carolina.

Duke is a corporation organized under the laws of North Carolina and is engaged in the generation, transmission, distribution and sale of electric energy in the States of North Carolina and South Carolina. Its service area embraces all or parts of 37 counties in North Carolina and 15 counties in South Carolina. It owns and operates local transportation systems and water supply systems in parts of its electric service area.

The proposed transaction results from the exercise by Duke of its option which is contained in Article 11 of the Interconnection Agreement between Carolina and Duke, dated June 1, 1961, and filed with the Federal Power Commission as Duke's rate schedule FPC No. 10, the same being also designated on the records of the Commission as Carolina's Rate Schedule FPC No. 45.

The facilities to be transferred consist of: (a) a substation, including the substation lot, at Greenville, South Carolina; and (b) a 31.26 mile section of 115 kv double circuit transmission line which extends northwardly from the substation at Greenville, South Carolina, to Duke's Davidson River Substation, near Brevard, North Carolina. According to the application, the facilities to be transferred have been and are being used for the interchange of electricity between the systems of Carolina and Duke and for the transmission of electric energy by Duke within its own system. The facilities described above lie wholly within the service territory of Duke and Applicants state that when they are integrated with Duke's other facilities, it is anticipated that they can be maintained and operated more efficiently and effectively for the transmission of electric energy within Duke's own system and for the interchange of electricity between the systems of Duke and Carolina.

Applicants represent that by reason of the sale of the facilities to Duke, Carolina will be relieved of substantial annual expenses in the operation and maintenance thereof. Except for the transfer to Duke of obligations incident to the operations or maintenance of the facilities described above, the proposed transaction will have no effect upon any contract for the purchase, sale or interchange of electric energy.

The facilities are to be transferred from Carolina to Duke for a cash consideration of $435,007. On the books of Carolina, the facilities are recorded at original cost of $732,217, with an accumulated provision for depreciation of $265,346, for a net book cost of $466,871. The consideration of $435,007 will be $31,864 less than the net book cost of $466,871. On the books of Duke, the difference of $31,864 will be transferred to accumulated provision for depreciation applicable to the facilities. On the books of Carolina, the difference will be debited to miscellaneous debits to surplus.

Written notice of the application has been given to the North Carolina Public Utilities Commission and to the South Carolina Public Service Commission and to the Governors of those States. Notice was also published in the Federal Register on December 9, 1964 (29 F.R. 16877), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before December 28, 1964 file petitions or protests with the Federal Power Commission, Washington, D.C., 20426. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Carolina, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described in the Commission's order issued January 31, 1957, *In the Matters of Carolina Aluminum Company, Carolina Power & Light Company*, Docket No. E-6712 (17 FPC 83).

(2) Duke is the owner and operator of facilities for the transmission and sale at wholesale of electric energy which is transmitted between North Carolina and Virginia, North Carolina and South Carolina, and between South Carolina and Georgia and consumed outside the State in which it is generated, and, therefore, is a "public utility" within the meaning of that term as used in Section 203 of the Federal Power Act.

(3) By the proposed transaction, Carolina will dispose of part of its facilities, subject to the jurisdiction of the Commission which have a value in excess of $50,000 and Duke, in acquiring such facilities, will merge or consolidate its facilities, subject to the jurisdiction of the Commission with those of Carolina, another person, all within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(4) The proposed sale of facilities by Carolina and the proposed acquisition of these facilities by Duke, as described above, upon the terms and conditions set forth in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed sale by Carolina and the proposed acquisition by Duke of the aforementioned substation and transmission line facilities, all as described above, are authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) The Applicants shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NOS. G–18799 AND RP62–1

ORDER TERMINATING PROCEEDINGS

(Issued February 17, 1965)

By order issued March 27, 1961, in Docket No. G–18799, the Commission approved a proposed Settlement Agreement, which reserved for future determination the single issue of the amount of the allowance for Federal income taxes that should be included in the cost of service underlying the approved settlement. The reserved tax issue involved the question of whether the tax allowance for ratemaking purposes should be computed on the basis of a consolidated return, as proposed by the staff, or on the basis of a separate return, as proposed by Respondent. The Examiner, in his decision issued April 23, 1962, rejected the staff's basis of computing the Federal income tax allowance and approved Respondent's proposed "separate return" theory. By order issued July 15, 1963, the Commission reversed the Examiner's ruling and computed Respondent's tax allowance on the basis of a consolidated return filing with a separation of regulated and non-regulated companies within the consolidated group of filing companies (Opinion No. 396, 30 FPC 158). On appeal the United States Court of Appeals for the Tenth Circuit reversed the Commission's order (*Cities Service Gas Company, et al.*, v. *F.P.C.*, 337 F. 2d 97). The Commission did not seek a writ of certiorari and on January 5, 1965, the Court of Appeals issued its mandate.

The proceeding in Docket No. RP62–1 involves proposed increased rates and charges filed by Respondent on June 21, 1961, under Section 4(e) of the Natural Gas Act and suspended by Commission order issued July 21, 1961. Prior to the termination of the suspension period, the Commission, on December 22, 1961, issued an order approving a proposed Settlement Agreement, which reserved the similar issue of the proper Federal income tax allowance to be included in the cost of service underlying the settlement.

On April 23, 1964, further proposed increased rates and charges, which are the subject of the proceeding in Docket No. RP64–9, became effective subject to refund. Thus, the rates proposed and determined in both Docket No. G–18799 and Docket No. RP62–1 related to "locked-in" periods. Additionally, data filed with this Commission reflects the fact that Respondent, through a public sale of more than 20 percent of its voting stock in August, 1963, is no longer eligible to participate in the consolidated income tax returns filed by its parent company. Therefore, and in order to conform to the mandate of the Court, it is now appropriate to terminate the proceedings in Docket Nos. G–18799 and RP62–1 insofar as they relate to the consolidated income tax issue. The termination of these proceedings and the Commission's decision not to seek certiorari of the Court's decision should not be construed as acquiescence in the correctness of the Court's decision.

The Commission orders:

(A) The proceedings in Docket Nos. G–18799 and RP62–1, insofar as they pertain to the consolidated income tax issue, are hereby terminated and Respondent is relieved of its obligations pertaining thereto for the periods covered by those dockets.

(B) In all other respects, the Settlement Agreements and the above referenced orders approving those settlements remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE MONTANA POWER COMPANY, PROJECT NO. 2301

ORDER FURTHER MODIFYING LICENSE ORDER

(Issued February 17, 1965)

On October 12, 1962, the Commission issued a license order under Section 4(e) of the Federal Power Act on application of The Montana Power Company, of Butte, Montana, for a license for constructed Project No. 2301 (28 FPC 586). The license was made effective as of December 1, 1961 and terminating December 31, 1969. The license order incorporated therein by reference Form L–1, December 15, 1953, Article 19 of which (14 FPC 562, 565) provides:

> *Article 19.* The actual legitimate original cost, estimated where not known, and the accrued depreciation of the project as of the effective date of the license shall be determined by the Commission in accordance with the act and the rules and regulations of the Commission, and such cost less such accrued depreciation, so determined, shall be the net investment in the project as of such effective date.

On review of the October 12, 1962 order as modified December 13, 1962 on rehearing (28 FPC 1018), the United States Court of Appeals for the Ninth Circuit held that The Montana Power Company is entitled to a "fair value" license under Section 23(a) of the Federal Power Act and remanded the matter to the Commission with directions to modify the license order accordingly. *Montana Power Company* v. *F.P.C.*, 330 F. 2d 781 (1964).

The Commission finds:

It is appropriate that our license order issued October 12, 1962 in this proceeding as modified December 13, 1962 be further modified, as hereinafter provided.

The Commission orders:

(A) Article 19 of our aforementioned license order issued October 12, 1962 is hereby eliminated from the order and in lieu thereof the following is substituted as Article 19 of the license:

> *Article 19.* The fair value of the project shall be determined in accordance with Section 23(a) of the Act and the rules and regulations of the Commission, and the Licensee hereby agrees to accept such fair value so determined as being the net investment in the project as of the effective date of the license.

(B) The aforementioned Commission order issued October 12, 1962, as modified by order issued December 13, 1962 and as further modified by this order, shall be accepted by the licensee and returned to the Commission within 30 days of the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

RIO SABINE, INC., DOCKET NO. CI62–1098; URBANA PIPE LINE COMPANY, DOCKET NO. CP64–80

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND DISMISSING APPLICATION

(Issued February 17, 1965)

Rio Sabine, Inc. (Rio Sabine) filed in Docket No. CI62–1098 an application on March 19, 1962, and an amendment thereto on January 10, 1963, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of transmission facilities and the sale of natural gas to the Arkansas Louisiana Gas Company, all as more fully set forth in the application and amendment.

The Commission granted Rio Sabine temporary authorization to make the sale to Arkansas Louisiana on April 20, 1962. Pursuant thereto Rio Sabine constructed and has been operating pipeline facilities connecting two small gas fields in Louisiana (Simpson Lake and Millers Bluff) with a gasoline plant of Rio Sabine in Miller County, Arkansas, and the sale and delivery of natural gas from the tail-gate of said plant to Arkansas Louisiana Gas Company under a contract dated March 1, 1962. The estimated cost of the facilities is $94,268, financed by a note issued to Texas Capital Corporation.[1]

Urbana Pipe Line Company (Urbana) filed in Docket No. CP64–80 an application on September 30, 1963, and supplementary data thereto on November 26, 1963, pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities, the acquisition of certain rights and properties of Rio Sabine, Inc., and the sale of natural gas, all as more fully set forth in the application.

The Commission on January 16, 1964, granted Urbana temporary authorization for its proposed acquisition of facilities and continued operation thereof.

Urbana proposes (1) to purchase from Rio Sabine approximately 11 miles of 2, 2½ and 3-inch pipeline in the ground and three 4-inch meter runs with meters for $14,876.85, (2) to construct and operate a compressor station and facilities to tie casinghead gas wells into its pipeline system at a cost of $23,000 and (3) continue the sale and delivery of natural gas to Arkansas Louisiana authorized by the Commission in its grant of temporary authorization of April 20, 1962, in Docket No. CI62–1098, and covered by Rio Sabine, Inc., FPC Gas Rate Schedule No. 2.

---

[1] A Federal Licensee under Small Business Investment Act of 1958.

Acquisition by Urbana of all the facilities originally proposed and constructed by Rio Sabine and operated under a temporary authorization of April 20, 1962, will render moot the certificate application of Rio Sabine, and the same should be dismissed.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 12, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorizations sought by Rio Sabine in Docket No. CI62–1098 and Urbana in Docket No. CP64–80, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Rio Sabine, Inc., a Texas Corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) Urbana Pipe Line Company, a Delaware corporation having its principal place of business in Dallas, Texas, upon acquisition of the facilities of Rio Sabine and the commencement of the sale and transportation of natural gas as proposed in Docket No. CP64–80 will be engaged in the business of transporting and selling natural gas in interstate commerce subject to the jurisdiction of the Commission, and will therefore be a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The proposed acquisition of facilities from Rio Sabine, the construction and operation of facilities by Urbana, and sale of natural gas in interstate commerce by Urbana, as hereinbefore described, and as more fully described in the applications and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed acquisition of facilities, construction and operation of facilities and sale of natural gas are required by the public convenience and necessity and certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Urbana is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Urbana's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the application filed by Rio Sabine in Docket No. CI62–1098 be dismissed as moot.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Urbana in these proceedings authorizing the acquisition of the facilities, of Rio Sabine construction and operation of facilities and sale of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the applications and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above, and the rights granted thereunder are hereby conditioned upon Urbana's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(C The facilities and acquisitions authorized by paragraph (A) above shall be effected, constructed and placed in operation by Urbana within 12 months from the date of the issuance of this order.

(D) The application filed in Docket No. CI62–1098 on March 19, 1962, be and the same is hereby dismissed.

OPINION NO. 449

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63–222

OPINION AND ORDER GRANTING CERTIFICATE

(Issued February 17, 1965)[*]

Syllabus

1. Transaction between Transco and Texaco is a transportation agreement and public convenience and necessity requires certification of the proposed service under Section 7 of Natural Gas Act. P. 239.
2. Contractual provisions do not control Commission's jurisdictional determinations. P. 240.
3. Contract terms here conform generally to other Commission approved transportation agreements and in light of facts, instant situation does not involve a sale by Texaco to Transco. PP. 240, 241.
4. *Distinguishing Lo-Vaca*, Commission *concludes* that mere physical commingling of Texaco's gas in Transco's lines with gas Transco has purchased for subsequent resale does not compel rejection of historic notions of bailments and require transformation of transportation agreement into a succession of sales. P. 241.
5. Essential feature of instant transaction is that Texaco is owner of gas both at beginning and end of its journey from wellhead to point of ultimate consumption. P. 241.
6. While transfers of gas from producer to pipeline or pipeline to direct customer may be treated as a sale for regulatory purposes in appropriate circumstances, there is no reason to do so here where clearly intermediate transactions result in returning gas to original producer-owner and no jurisdictional question is involved—in reaching such determination Commission does not decide status of other types of transactions, such as X–20 case. P. 241.
7. Beneficial features of transportation agreement *discussed*. PP. 241, 242.
8. Intervener's Offer of Settlement rejected since it is an attempt to present entirely new affirmative case almost a year after close of record. P. 242.
9. No justification has been shown for requiring that "just and reasonable" rates for transportation service be determined in this proceeding. P. 258..
10. Not all difference in treatment between customers is illegal under the Act—only unjust, unreasonable or undue discrimination. P. 263.

---

[*] Initial decision appears on P. 242. Rehearing denied by Opinion No. 449–A, *infra* P. 818. Affirmed, *sub nom. Public Service Electric & Gas Co.* v. *F.P.C.*, 371 F. 2d 1 (CA3–1967). Petition for certiorari filed in *Public Electric & Gas Co.* v. *F.P.C.*, S. Ct. No. 93, O. T. 1967.

11. Economics favor use by Texaco of its own gas rather than purchasing it from distributor in area. P. 265.

12. Precedent cases establish that there is no Commission policy against approval of proposed transportation service if it is otherwise required by public convenience and necessity. P. 273.

13. Commission *issues* certificate of public convenience and necessity authorizing transportation service, in proceeding arising under Section 7 of the Natural Gas Act.

Commissioner O'Connor *concurs* in the result.

Robert C. Koury for South Jersey Gas Company

John R. Sailer and *John T. Miller, Jr.* for Elizabethtown Consolidated Gas Company

Robert W. Maris and *William T. Coleman, Jr.* for Philadelphia Gas Works, Division of United Gas Improvement Company

Sidney M. Schreiber for New Jersey Natural Gas Company

Donald Blanken, Vincent P. McDevitt and *Samuel G. Miller* for Philadelphia Electric Company

Scott Scammell for City Gas Company of New Jersey

William Gural, Maria D. Stroumtsos and *Felix G. Forlenza* for Board of Public Utility Commissioners of the State of New Jersey

Agnes Mae Wilson and *Robert L. Russell* for Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

Ross, *Commissioner:*

This is a proceeding under Section 7 of the Natural Gas Act. Transcontinental Gas Pipe Line Corporation (Transco) seeks a certificate of public convenience and necessity to transport gas owned and produced by Texaco Inc., in volumes of 8,000 Mcf per day of firm gas and up to 16,000 Mcf per day of interruptible gas, from two points of receipt in the Gulf Coast area of Texas and Louisiana to a point of delivery on Transco's system near Texaco's Eagle Point Refinery located at Westville, Gloucester County, New Jersey, by means of Transco's main line facilities connecting these two areas. Texaco plans to convert the refinery from the use of fuel oil to natural gas in order to lower operating costs. The initial rates proposed by Transco are the same rates as those charged Sun Oil Co. for similar transportation service. The firm rate is the contract demand rate for Zone 3, exclusively of the average cost of purchased gas. The interruptible rate is 22 cents per Mcf. Overall, the service would earn an incremental return of over 12½ per cent.

In connection with the proposed service Transco requests authority for the construction and operation of additional pipeline facilities consisting of 10.5 miles of 8 inch purchase lateral in southeast Louisiana, two gathering meter and regulator stations at the points of receipt and a sales meter and regulatory station at the point of delivery. The additional facilities required are estimated to cost approximately $600,000. Other facilities originally requested in this proceeding have since been authorized by the order issued April 17, 1964, in

Transcontinental Gas Pipe Line Corporation, Docket No. CP64-96, 31 FPC 957.

On June 5, 1964, Presiding Examiner Dyer Justice Taylor issued an initial decision granting Transco's application subject to certain specified conditions regarding curtailments and priority of service. Transco, in its brief opposing exceptions, indicates that the conditions imposed by the examiner are deemed appropriate and are acceptable to it.

Exceptions to the examiner's decision were filed jointly by and on behalf of seven intervening local gas distribution companies[1] and by the Board of Public Utility Commissioners of the State of New Jersey, which adopted the exceptions and the reasons stated in the joint brief on exceptions filed by the distribution company intervenors. The Commission's staff, which supported the award of the certificate to Transco, did not except to the intermediate decision. By order of August 25, 1964, the Commission scheduled oral argument on the issues raised by exceptions to the examiner's initial decision. These issues were directed to whether the proposed transportation was required by the public convenience and necessity. In addition, the Commission raised *sua sponte* an issue relating to the nature of the transaction between Transco and Texaco and provided for the filing of briefs on this issue. Specifically, the issue raised was:

> Whether the arrangement between Texaco and Transco involves a sale of gas by Texaco to Transco for resale by the latter so that the producer should be required to secure a certificate.

At the oral argument and in the supplemental briefs, Transco and Texaco contended that the so-called commingling doctrine of the Commission had been rejected by both the Fifth and Eighth Circuits.[2] Moreover, they argued that this doctrine had been applied only to determine whether or not what was admittedly a sale by the producer in the first instance, was a sale for resale in interstate commerce. This situation is distinguishable, they point out, in that the transaction concededly is in interstate commerce. After describing the several transportation agreements previously approved by the Commission, these parties argued that public policy dictated against expanding the commingling doctrine to cases of this type.

Staff and the New Jersey intervenors[3] took a contrary view of the nature of the transaction between Transco and Texaco. In their view, the instant agreement comprised a sale in the field by Texaco to Transco, and a resale in Westville, N.J. by Transco to Texaco. Under the Commission's commingling doctrine, they indicate that physically a part of the gas initially delivered by Texaco to Transco will be resold by Transco to various of its wholesale customers served by its main line facilities. In support of this position, they note that Transco, under the agreement, bears the risk of loss while the gas is in transit, except for loss due to force majeure. The New Jersey intervenors argued various points indicating, in their opinion, why the proposed arrangement was not consistent with the public interest.

We conclude that the transaction between Transco and Texaco is a transportation agreement and that the public convenience and necessity requires certification of the proposed transportation service under Sections 7(c) and 7(e) of the Natural Gas Act.

---

[1] City Gas Company of New Jersey, Elizabethtown Consolidated Gas Company, New Jersey Natural Gas Company, Philadelphia Electric Company, Philadelphia Gas Works Division of the United Gas Improvement Company, Public Service Electric & Gas Company, and South Jersey Gas Company.

[2] *Lo-Vaca Gathering Company* v. *F.P.C.*, 323 F. 2d 190 (1964); *Amerada Petroleum Corporation* v. *F.P.C.*, 334 F. 2d 404 (1964).

[3] These parties are identified in footnote 1, *supra*.

The part of the Natural Gas Act covering the issue raised *sua sponte* is Section 7(c) which provides:

> No natural-gas company or person which will be a natural-gas company upon completion of any proposed construction or extension shall engage in the transportation or sale of natural gas, subject to the jurisdiction of the Commission, or undertake the construction or extension of any facilities therefor, or acquire or operate any such facilities or extension thereof, unless there is in force with respect to such natural-gas company a certificate of public convenience and necessity issued by the Commission authorizing such acts or operations.

Considering the fact that the pipeline industry had evolved to a considerable extent by the time Congress enacted the Gas Act, it is noteworthy that the term "transportation" was specifically included. In the past, the Commission has approved several transportation arrangements of a type similar to that presented here. At the present time, there are 25 transportation rate schedules on file with the Commission by 13 different pipelines.

Under the agreement executed by Transco and Texaco, and filed herein as Exhibit No. 8 Transco agrees to transport for Texaco daily from points of delivery in the Gulf Coast area to the Westville plant in New Jersey, such quantities of gas on a firm basis as Texaco makes available to such delivery points up to 8,000 Mcf per day, and up to 16,000 Mcf per day on an interruptible basis. Departure from scheduled daily deliveries due to the inability of the parties to maintain precise control must be kept to the minimum and balanced out as soon as practicable. It is the intention of the parties that the daily deliveries of gas by Texaco for transportation shall approximately equal the amount of gas which Texaco shall receive at the New Jersey delivery point. Under Article 8 of the agreement, the parties recognize that the gas delivered by Texaco will be commingled with gas received from other sources in Transco's pipeline. However, the parties agree that the quantity of the gas delivered by Transco to Texaco shall be comparable to that initially delivered by Texaco. Article 9 provides detailed measuring requirements respecting both the quantity and quality of the gas delivered by Texaco to Transco and redelivered by Transco to Texaco. Of course, these contractual provisions do not control our jurisdictional determination.[4]

Transco is not liable for any gas gathering, occupation or production, severance or sales tax or taxes of similar nature presently or hereafter validly imposed. In addition, Texaco is obliged to reimburse Transco in the amount of any future tax validly paid by Transco incurred in connection with the proposed transportation. Under Article 10, the parties agree to share the loss of any gas resulting from force majeure. Otherwise, the agreement places the risk of loss with Transco. Texaco warrants clear title to the gas to be delivered to Transco and Transco warrants that the gas shall be free of all liens when delivered to Texaco. Nothing in the agreement purports to transfer title to the gas delivered by Texaco to Transco. Texaco receives no consideration whatever under the agreement. The only obligation is Texaco's obligation to pay the agreed rate to Transco in return for the transportation of gas of a specified volume and quality.

The terms of this agreement conform generally to other transportation agreements we have approved. Texaco simply desires to transport gas it owns and has developed to a point where it can economically use the gas. It therefore has entered an arrangement with one who has the facilities capable of transporting the gas. We conclude that in the light of the facts of this case, the instant situation does not involve a sale by Texaco to Transco.

---

[4] 26 FPC 606. The Commission's decision was recently sustained by the Supreme Court in *California* v. *Lo-Vaca Gathering Co., et al.*, 379 U.S. 366, Docket No. 46, *et al.*, decided Jan. 18, 1965.

Staff and the New Jersey Intervenors argue that our decision in *Lo-Vaca* requires us to view the instant transaction as one involving a sale by Texaco to Transco and a (nonjurisdictional direct industrial) resale by Transco to Texaco. In essence, Staff reaches this conclusion on the basis of commingling, *i.e.*, different molecules of gas being redelivered by Transco to Texaco. We disagree with this position.[5]

Initially, we note that the issue present in *Lo-Vaca*, *supra*, was whether arrangements, which concededly were sales, were in interstate commerce or for resale, and hence subject to Federal regulation under the Natural Gas Act. The issue here, on the other hand, is whether in the circumstances of this case there is any sales relationship between Texaco and Transco which is subject to Commission jurisdiction as such, or whether the proposed transaction is a transportation service under Sections 4, 5 and 7 of the Act.

We conclude that the mere physical commingling of Texaco's gas in Transco's lines with gas Transco has purchased for subsequent resale does not compel rejection of historic notions of bailments and require us to transform the transportation agreement into a succession of sales, by Texaco to Transco and again by Transco to Texaco. An essential feature of this transaction is that Texaco is the owner of the gas both at the beginning and the end of its journey from the wellhead to the point of ultimate consumption. It has merely contracted for conventional transportation arrangements subject to the Commission's jurisdiction. While transfers of gas from a producer to a pipline or from a pipeline to a direct customer may be treated as a sale for regulatory purposes in appropriate circumstances, we see no reason to do so in the circumstances of this case where it is clear that the intermediate transactions result in returning the gas to the original producer-owner and no jurisdictional question is involved. In reaching this determination we do not decide the status of the other types of transactions, such as that presented in the X-20 case.[6]

Lo-Vaca raised the possibility of a situation whereby substantial volumes of gas moving in interstate commerce would escape federal regulatory authority. Under the proposal, a pipeline would have been able to discriminate in favor of "nonjurisdictional" customers and could immunize a particular supplier from the reach of federal regulation. In these and in other ways, the Supreme Court noted, an attractive gap in the federal regulatory scheme would be created. Such a danger is not present in this case. The Commission has full and complete authority over the transportation agreement, and Texaco could not inject one Mcf of gas into Transco's interstate pipeline unless the Commission is satisfied that the transportation service is required by the public interest.

We have reviewed the record in this proceeding and conclude that the proposed service is required by the public convenience and necessity within the meaning of Sections 7(c) and 7(e) of the Gas Act. In our view, the presiding examiner properly treated these issues and we will therefore adopt this decision.

There are certain beneficial features of this transaction that we wish to emphasize. The present transaction precludes triggering of Transco's gas purchase contracts covering gas produced in Texas which might otherwise occur under a typical gas purchase contract. In addition, the instant arrangement allows the parties considerable operating flexibility in that specific leaseholds are not dedicated. The proposed service also will benefit Transco's other jurisdictional customers from a cost standpoint. The record indicates that the jurisdictional transportation revenues will exceed the associated incremental costs by about $600,000 annually.

---

[5] Footnote 4, *supra*. See also *F.P.C.* v. *Amerada Petroleum Corp., et al.*, 379 U.S. 687, Docket No. 585, per curiam opinion decided February 1, 1965.

[6] *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1.

None of the foregoing benefits would be available to Transco's jurisdictional customers if the proposed transaction were viewed as a sale from Texaco to Transco and a resale back to Texaco. The latter would be a nonjurisdictional direct industrial sale and hence immune from consideration in a rate proceeding.

On November 18, 1964, Public Service Electric & Gas Company, one of the intervenors in this proceeding, filed a document entitled "Offer of Settlement and Reasons for Acceptance". In this document, Public Service requested the Commission to order an informal settlement conference which would permit Public Service to offer a rate designed to meet the conditions of service satisfactory to Texaco and Transco. Public Service also suggested that it could offer a resale price of 42.9 cents per Mcf to Texaco. As Texaco correctly pointed out in its answer in opposition, Public Service's request is nothing more than an attempt to present an entirely new affirmative case almost one year after the record has been closed and the case briefed and submitted for decision. In addition the rate suggested by Public Service, even if reliable, is unsatisfactory to parties. For these reasons, we shall deny the relief requested by Public Service.

The Commission orders:

(A) The presiding examiner's decision and order issued herein on June 5, 1964, is hereby adopted as the decision of the Commission with respect to the public interest aspects of the application.

(B) The exceptions to the examiner's decision are hereby denied.

(C) The relief requested by Public Service Electric & Gas Co. in its "Offer of Settlement" filed November 18, 1964, is denied.

Commissioner O'Connor *concurs* in the result.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION UNDER SECTIONS 7(c) AND (e) OF THE NATURAL GAS ACT

(Issued June 5, 1964)

TAYLOR, *Presiding Examiner:* This is a proceeding under the transportation provision of Section 7 of the Natural Gas Act (52 Stat. 824 (1938), 15 U.S.C. Sec. 717(f)). Transcontinental Gas Pipe Line Corporation (Transco) seeks a certificate of public convenience and necessity under Sections 7 (c) and (e) of the Act authorizing it to transport natural gas for Texaco Inc. (Texaco) from the Texas-Louisiana Gulf Coast Area to the State of New Jersey, and to construct, install, and operate certain additional pipeline facilities in connection therewith.[1]

Transco is a "natural-gas company" as that phrase is used in Section 2 of the Act (52 Stat. 822 (1938), 15 U.S.C. Sec. 717(b)). It owns and operates an interstate pipeline system which extends from natural-gas supply fields in the Gulf Coast Area to New York City. Texaco owns natural-gas reserves in Texas and Louisiana and a refinery at Westville, Gloucester County, New Jersey, all located near Transco's transmission line. Texaco intends to convert the refinery operations from the use of fuel oil to natural gas in order to lower operating costs. The conversion is predicated upon the use of its own produced natural gas, as distinguished from that which would be supplied at increased cost by the local natural-gas distributor, Public Service Electric & Gas Company (Public Service), an intervener herein. Transco's application is designed to permit Texaco to accomplish the conversion as intended. The transmission line would bring Texaco's produced natural-gas supply to within 100 feet of an existing Texaco line, near Woodbury, New Jersey.[2] Texaco has not filed an application with this Commission for authority to construct the facilities which are needed to bridge the aforesaid gap and the Examiner finds, contrary to the contentions herein, that it has no jurisdiction to require such a filing.

---

[1] Its application was filed in Docket No. CP63-222 on February 11, 1963, and supplemented on April 9, 1963, May 23, 1963, and July 15, 1963.

The performance of the transportation is governed by a contract between Transco and Texaco dated February 7, 1963, as amended by letter agreement dated December 17, 1963.

In order to perform the proposed transportation service, Transco seeks authority, in general, to construct, install, and operate the following: (1) two 11-mile sections of 30-inch pipeline loops, one in Louisiana and one in Pennsylvania; (2) a compressor at an existing station in Mississippi; (3) 10½ miles of 8-inch transmission purchase lateral in Louisiana; (4) gathering meter and regulator stations in Louisiana and Texas; and (5) sales meter and regulator station in New Jersey. The total cost was estimated in the application, as supplemented, to be $4,858,000. As subsequently shown, however, the construction of the facilities requested in numbers (1) and (2) above has been authorized by the Commission. The cost of the remaining facilities is about $600,000.

The Examiner, for the reasons subsequently set forth, finds that approval of the application, as limited above and as conditioned herein, is required by the present or future public convenience and necessity.

The application was set for hearing under the shortened hearing procedure[3] by notice issued by the Secretary dated August 13, 1963. Such hearing was postponed due to the filing by distribution companies of petitions to intervene in opposition.[4] Texaco petitioned to intervene in support of the application. All such petitions were granted by order dated October 29, 1963. The Board of Public Utility Commissioners of the State of New Jersey (Board) filed a Notice of Intervention on October 25, 1963. All parties except City Gas entered appearances.

Pursuant to a Notice issued by the Secretary on September 30, 1963, the hearing was convened on October 29, 1963. After a brief postponement for the purpose of exploring the possibility of stipulations, the hearing was reconvened on November 12, 1963. On the same day an on-the-record conference under Section 1.18 of the Rules of Practice and Procedure was held and concluded, and the formal hearing commenced. The latter was concluded on January 29, 1964, after eight nonconsecutive hearing days.

No application for temporary authority pursuant to Section 7(c) of the Act has been filed.

Evidence was presented by Transco and Texaco in support of the application. Public Service and Elizabethtown Consolidated, on behalf of themselves and the distribution company interveners, presented evidence in opposition. Neither the Staff nor the Board of Public Utility Commissioners took a position at the hearing. Initial, answering, and reply briefs were filed by various parties. All interveners other than Texaco joined in support of the brief filed by Public Service in opposition to the application. In addition, the Board, Elizabethtown Consolidated, and New Jersey Natural filed separate briefs in opposition. Except for the installation of a compressor, Staff in its brief supports the application. Among other things, the applicant and Texaco rely upon two Sun Oil Company tariffs to demonstrate that the initial rates proposed herein are consistent with the public interest.[5] They also rely upon the Sun transportation agreements, and similar agreements approved by this Commission, as some support for their contention that the type of service proposed herein is required by the public convenience and necessity.

---

[2] 8,000 Mcf per day of firm gas service and up to 16,000 Mcf per day of interruptible gas service. Unless otherwise stated, all volumes are shown at a pressure base of 14.73 psia.

[3] 18 CFR 1.30(c) and 1.32.

[4] Public Service Electric and Gas Company (Public Service); South Jersey Gas Company (South Jersey); Elizabethtown Consolidated Gas Company (Elizabethtown Consolidated); City Gas Company of New Jersey (City Gas); Philadelphia Electric Company (Philadelphia Electric); Philadelphia Gas Works Division of the United Gas Improvement Company (Philadelphia Gas Works); New Jersey Natural Gas Company (New Jersey Natural). All of these interveners, including Public Service, are customers of Transco except New Jersey Natural which is a customer of South Jersey.

Included in the determination required by Section 7(e) of the Act are such elements as an adequate gas supply, adequate markets and facilities which are reasonable and feasible from the standpoint of cost and design, reasonable and feasible financing, and the economic feasibility of the project. In this case, the only real issue concerning the foregoing elements, as they are usually understood, is whether or not the proposed rates and terms of service will result in the proposal being economically feasible. The issues which are dispositive of this proceeding, and which have been extensively briefed by the parties, are as follows:

1. Texaco's Facilities—Jurisdiction..*Page 247*

Does the Commission have jurisdiction over the proposed transportation of natural gas by Texaco from Transco's main line to the former's refinery, all in the State of New Jersey?

2. Markets, End-Use, and Field Prices..*Page 248*

(a) Has Texaco furnished satisfactory proof as to the need for, and the economic advantages to it, of the proposed service?

(b) Is the end-use of the natural gas consistent with the principles found in *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1 (1960)?[6]

(c) Does the proposal herein result in a preemption of capacity as in the *X-20* case?

(d) Does the proposal herein constitute an "attractive regulatory gap" and weaken the Commission's control over field prices of natural gas?

3. Availability of Capacity..*Page 253*

(a) Does the Commission's order in Docket No. CP64-96 provide for the construction of sufficient firm pipeline capacity to provide firm transportation to Texaco as requested in the present application?

(b) Will the proposed interruptible delivery of an average of 9,000 Mcf per day improve Transco's load factor in a manner consistent with and required by the public interest?

(c) Will the proposal herein result in a preemption of "cheap expansibility" and "priorities of service"?

4. Rates and Economic Feasibility..*Page 258*

(a) Under its contract Texaco has no obligation to tender interruptible gas for transportation, and there is no provision in its contract giving Transco the right to file for an increase in the interruptible rate. Do these facts require that the proposed rates be found "just and reasonable" in this proceeding in order to protect existing consumers?

(b) Are the proposed rates and terms of service unduly discriminatory or preferential?

---

[5] Transco FPC Gas Tariff, Original Volume No. 2, Rate Schedules X-1 and X-11.

[6] Hereinafter sometimes referred to as the *X-20* case.

5. Other Public Interest Considerations........................Page 264

(a) Is Public Service unable to furnish Texaco's natural-gas requirements at a price which would warrant a change from its present fuel oil uses to the use of natural gas?[7]

(b) Would certification of the instant proposal create a precedent which would cause others to conclude similar arrangements to the detriment of distributors?

(c) Is the transportation agreement a method of avoiding state taxes? If so, is it so clearly against public policy as to require denial of the application?

(d) Does the Commission have a policy against the approval of transportation agreements between pipeline and industrial companies where the latter is also a producer of natural gas?

The contentions of the parties will be set forth in the discussion of each of the foregoing issues. First, certain operational facts will be set forth and those Section 7(e) matters considered that can be disposed of without substantial discussion.

CONTRACT PROVISIONS AND GAS SUPPLY

The contract between the parties was submitted with the application herein and denominated "Pro-Forma Rate Schedule X-37," and subsequently introduced in evidence as Exhibit No. 8. It was executed by the parties on February 7, 1963, and amended by letter agreement dated December 17, 1963. It governs all aspects of the transportation service proposed herein and is for a term of 20 years from the date of initial delivery, which shall be not later than September 1, 1964.

Texaco has its own natural gas available (1) in the South Clara Driscoll Field, Nueces County, Texas, and (2) near the tailgate of its Paradis Gasoline Plant, St. Charles Parish, Louisiana. Under the contract natural gas from these two locations, and from such "other point or points in Texas or Louisiana as may be mutually agreeable,"[8] is to be delivered to Transco for transportation to, and redelivery at, a mutually agreeable point on Transco's 12-inch Marcus Hook-Woodbury transmission line near Texaco's Eagle Point refinery. Title to the gas will always remain in Texaco. Transco must accept for such transportation the firm "contract transportation demand" of 8,000 Mcf per day. If Transco, in its sole judgment, determines that it has capacity available after fulfilling its other market commitments, it will accept for delivery up to an additional 16,000 Mcf per day on an interruptible basis. Even if capacity were available, Transco is not obligated to receive for transportation at any Texas delivery point a total daily volume in excess of 10,000 Mcf. The parties estimate that Texaco will deliver an average of 9,000 Mcf per day from the Texas and Louisiana points. However, Texaco is under no obligation to deliver any interruptible gas for transportation. There is no minimum bill associated with the interruptible service.

The maximum quantity of gas required to be available for delivery under the contract is 8,000 Mcf per day of 20 years, or about 58,400,000 Mcf. Texaco agrees that at all times during the 20 years it will maintain gas reserves, over and above reserves committed or subject to any other contract, sufficient to insure the availability of the 58,400,000 Mcf, less any quantity which shall theretofore have been transported by Transco to Texaco on a firm basis. No specific leases or reservoirs are dedicated to this service.

---

[7] The Examiner's affirmative finding on this issue obviates a finding on the policy issue presented by Transco's proposal to serve an industrial customer in Public Service's area of distribution. *Cf. Southern Natural Gas Company*, Docket No. G-19632, 25 FPC 925 (1961).

[8] Exhibit 8, p. 8.

In their briefs, no participant contended that Texaco's gas supply would be insufficient to service the 8,000 Mcf firm and 16,000 Mcf per day interruptible service for 20 years. Furthermore, no participant in this case contended that natural gas is in short supply in the areas in question in this case, even though the Presiding Examiner specifically raised the question. The Examiner finds that on the basis of this record Texaco has an adequate supply of gas to provide the foregoing firm and interruptible deliveries to Transco.

OTHER SECTION 7(e) MATTERS

Except for a $785,000 compressor unit, the briefs raised no issue concerning the location, cost, and design of the facilities by Transco. The financial ability of Transco to provide the necessary funds is not in issue. There is an issue concerning the interruptible rate and its effect on economic feasibility.

On April 17, 1964, 31 FPC 957, the Commission in Docket No. CP64-96 ordered that a certificate of public convenience and necessity be issued to Transco authorizing, among other things, the construction and operation of certain facilities proposed and described in the application in that proceeding. As subsequently shown, the April 17 order authorizes Transco to construct and operate the major portion of the facilities requested in this proceeding. As a result, there is no longer any issue concerning the need for the compressor unit. Also, the resolution of certain other Section 7 issues has been simplified. The participants stipulated that the Examiner could take official notice of the then pending application in Docket No. CP64-96.

A. *Location, Cost, Financing, and Design of Facilities*

In its application in this proceeding, Transco proposed to construct and operate the following additional pipeline and compressor facilities, at an estimated cost of $4,858,000, in conjunction with the transportation service for Texaco:

Description and cost	*Location*
10.82 miles 30 inch loop line, $1,270,955;	Southeast Louisiana Gathering System
11.08 miles 30 inch loop line, $1,783,539;	Marcus Hook-Woodbury Loop Line in the State of Pennsylvania
3,400 H.P. Compressor unit, $785,000	Existing Station 80 in the State of Mississippi
Franchise and Consents, General Overheads, Interest During Construction, and Contingencies, $437,717, exclusive of $95,400 allocated to the compressor	
10.5 miles 8 inch lateral, $502,239;	Connecting Southeast Louisiana Gathering System to Texaco's Paradis Plant
Gathering Meter and Regulator Stations, $45,075;	South Clara Driscoll Field and Paradis Field
Sales Meter and Regulator Station, $33,475;	Point of redelivery on Marcus Hook-Woodbury Loop Line

The construction and operation of the first three facilities was authorized by the April 17 order in Docket No. CP64-96. In its application in such docket Transco represented that if the application in Docket No. CP64-96 was "authorized prior to the authorization in Docket No. CP63-222, Transco [would] amend that latter application to remove therefrom the duplicate facilities which have also been included in this application." At this writing, no motion to amend the application as aforesaid has been filed. Accordingly, the order herein will deny Transco's application to the extent it requests such duplicate facilities.

As a result of the foregoing, there is presented for decision herein only a proposal to construct and operate (1) the 10.5 miles of 8-inch lateral in Louisiana ($502,239), (2) the gathering meter and regulator stations ($45,075), and (3) the sales meter and regulator station ($33,475). The estimated cost of constructing such facilities is about $600,000 ($580,789 plus a small portion of the total franchise and other expenses). The Examiner finds that the three proposed facilities enumerated in this paragraph, and the cost thereof, are reasonable and adequate and are required by the public convenience and necessity.

The three foregoing facilities will be financed initially through temporary bank loans. Long-term financing may be arranged at a later date as part of a future financing program of Transco. The proposed expenditures are relatively minor in relation to Transco's existing plant. No party has questioned the feasibility or appropriateness of Transco's plan of financing. The Examiner finds that Transco has adequate financial resources to construct the facilities proposed and that the proposed financing will not render unsound its corporate financial structure.

TEXACO'S FACILITIES—JURISDICTION

Public Service contends that the Commission must assert its jurisdiction and require Texaco to file an application for authority to construct and operate its connecting facilities. In the absence of such filing, and approval by the Commission, it states that no certificate should be issued to Transco. Section 1(b) of the Natural Gas Act provides that it shall apply to the "transportation of natural gas in interstate commerce." The Examiner concludes that the transportation from the redelivery point on Transco's line is merely an incident to the use by Texaco of its own gas supply and is not "commerce" within the meaning of the Act.

The natural gas transported for Texaco will be redelivered to Texaco at a meter station to be constructed by Transco on the latter's 12-inch Marcus Hook-Woodbury transmission line. Texaco has an existing 8-inch refinery lead-in facility which is located between 30 and 100 feet from the proposed meter station. Texaco proposes to construct the necessary facilities to connect Transco's 12-inch line to the 8-inch lead-in line. The latter is now used to return refinery products, such as oil and gasoline, which remain in a 16-inch main delivery line after Texaco delivers such products into another company's system for delivery to Linden, New Jersey. Texaco no longer needs the 8-inch line to return its products and will convert it to natural-gas service. Contrary to Public Service's contention, the Examiner finds that the 8-inch line is a part of Texaco's refinery facilities. Texaco will not sell any gas for resale or otherwise.

The point of delivery by Transco is about 4½ miles from the refinery. In traversing this distance the 8-inch line crosses both public and private property. The line will receive a continuous flow of gas from other states at pressures up to 250 pounds per square inch. (It will require approximately 50 to 70 psi at the discharge end at the refinery.) Public Service contends that these facts bring this case squarely within the principle established by *Federal Power Commission* v. *East Ohio Gas Co.*, 338 U.S. 464 (1950).[9]

---

[9] No certificate of exemption has been filed under the amendment to Section 1(c) of the Act showing that a State "commission has regulatory jurisdiction over [the] rates and service * * * and is exercising such jurisdiction * * *." (68 Stat. 36 (1954), 15 U.S.C. Sec. 717(c)). This section is referred to as the Hinshaw Amendment. Its purpose was to overcome the Supreme Court's decision in the *East Ohio* case, *supra*. See S. Rept. No. 817, 83d Cong., 2d Sess. (1954).

East Ohio owned and operated a natural-gas business solely in the State of Ohio. It sold gas through its local distribution systems. Most of such gas was transported from other states by interstate pipeline companies, one an affiliate of East Ohio. Inside the Ohio boundary these interstate lines connected with East Ohio's "large high-pressure lines in which the imported gas, propelled mainly by its own pressure, flows continuously more than 100 miles to East Ohio's local distribution systems." (338 U.S. at 467)

The court held such transportation to be in interstate commerce and subject to the Natural Gas Act even though East Ohio did not sell natural gas for resale. The transportation alone was sufficient. It also held that the facilities did not come within the provision in Section 1(b) of the Act making the Act inapplicable "to the local distribution of natural gas or to the facilities used for such distribution." The "facilities" for "local distribution" were held to refer to "equipment for distributing gas among customers within a particular local community, not the high-pressure pipe lines transporting the gas to the local mains." (338 U.S. at 469–470)

Public Service construes the transportation from Transco's line to the Texaco refinery as similar to the transportation by East Ohio to its local distribution systems for sale to consumers. In order for the analogy to be complete, it would have to construe the Texaco refinery as similar to East Ohio's local distribution system. In effect, therefore, Public Service erroneously considers transportation for one's own use the same as transportation for sale to consumers.

Staff "deems the small amount of construction required here to be an extension of Texaco's present facilities for which no certificate from this Commission is required." (Br. p. 28) The principles found in the applicable cases support the following conclusions in this case: (1) that interstate transportation will continue after gas is redelivered to Texaco for further transportation to the Eagle Point refinery; and (2) that upon such redelivery "commerce" within the meaning of the Natural Gas Act ceases.[10] The *East Ohio* case is inapplicable here because there "commerce" had not ceased.

This view is also supported by three reported Commission cases which recognized that own use transportation does not require certificate authorization. *Anchor Hocking Glass Corporation*, 2 FPC 930; *Jersey Central Power & Light Company*, 9 FPC 717; and *Montana Power Company*, 10 FPC 950.[11]

One further matter: Public Service cites the Commission's order in *Texas Eastern Transmission Corporation*, 11 FPC 211, 218, as further support for its position. There the Commission required Public Service to file a certificate application to construct an 11.3 mile lateral line which was to be used to transport purchased gas for use in the production of mix gas for further sale in "commerce" and not own use consumption. The order applies only to a situation where "commerce" has not ended and, therefore, is inapplicable to the instant case.

MARKETS, END USE, AND FIELD PRICES

Economic Advantages to Texaco

No sale is being proposed by Transco. Accordingly, the question of a market as usually found in a Section 7 case is not present. Texaco is simply using Transco's services to bring its own produced gas from the Texas-Louisiana Gulf Coast Area to its Eagle Point refinery in New Jersey. All parties deem it desirable and in the public interest that Texaco be permitted to utilize natural gas in its refinery. The central question is whether the pipeline company or the local distributor should supply the gas.

---

[10] See *The Pipe Line Cases*, 234 U.S. 548, 562 (1914); *Valvoline Oil Co.* v. *U.S.*, 308 U.S. 141 (1939); *Champlin Rfg. Co.* v. *United States*, 329 U.S. 29 (1946).

[11] The same conclusion is also reached in the unreported case of *Reynolds Metal Co.* See letter order of March 27, 1959.

The Eagle Point refinery manufactures a complete line of petroleum products and is one of Texaco's major refineries. It will utilize the natural gas, as blended with its refinery gas, to replace fuel oil as a fuel source in its refinery operation. All gas transported will be produced by Texaco and not sold to any purchasers. The refinery currently has a crude oil capacity of approximately 76,000 barrels per day. Its petroleum products include liquefied petroleum gas, several grades of motor gasoline, home heating oil, diesel fuel oil, and residual fuel oil. It also manufactures petrochemicals and two grades of aviation gasoline. The three major classifications of fuel consuming units are (1) gas engine driven compressor units, (2) direct-fired process heaters, and (3) direct-fired steam generators. The average fuel requirements for these units are equivalent to 34,000 Mcf per day of natural gas. Approximately one-half of such fuel requirements is presently supplied by gas produced as a by-product from refinery operations. The balance (equivalent to 17,000 Mcf per day) is met by residual fuel oil manufactured at the refinery. Existing refinery heaters are not designed to burn coal.

The natural gas desired herein will reduce substantially the necessity of burning the equivalent of 17,000 Mcf per day of residual fuel oil as a refinery fuel. The natural gas will be blended with refinery gases in the fuel gas mix drum and preferentially used in gas engine driven compressors and direct-fired process heaters. The average daily fuel consumption of the compressors and process heaters is approximately 22,000 Mcf per day.[12] Remaining supplies will be utilized in steam generation for prime movers and process steam. None of the 8,000 Mcf per day of firm gas will be utilized for steam generation. Only the heaters associated with one of the process units are equipped to burn both gas and liquid fuel. The heaters on all other remaining process units are equipped for gas burning only.

Texaco plans a fairly uniform take of interruptible gas[13] and intends to use it to displace the liquid fuel being burned in the steam generators, to the extent it is available. No one, however, has ever represented to Texaco that the interruptible service is to be on a firm basis. It will not remove its fuel oil facilities and will be able to shift to stand-by facilities on a few hours notice. Accordingly, it can from an operating standpoint tolerate a number of days of sustained interruption; but "operation for a sustained period of time on fuel oil tends to place the units in condition to where you cannot maintain the same efficiency as had you kept them on gas." (Tr. 545)

The fuel oil which will be displaced by Texaco's transported gas will be utilized to meet existing commitments of Texaco. In addition to using the displaced fuel oil to meet existing commitments to customers, Texaco desires to use its own produced gas as refinery fuel because the gross output of refined products will be increased and because the use of natural gas in place of fuel oil (1) will permit a reduction in the amount of plant equipment committed to fuel consumption, (2) improve combustion efficiency, and (3) eliminate certain items of operating and maintenance expense. These benefits will be considered seriatim.

In order to burn fuel oil as a refinery fuel, storage tankage is required. The proposed firm supply of 8,000 Mcf of natural gas per day from Transco will make a portion of such storage tankage available for other purposes and thereby reduce the amount of plant equipment committed to fuel consumption.

---

[12] The six gas engine driven compressors consume approximately 1,500 Mcf per day. The direct-fired process heaters have an average daily consumption of 20,500 Mcf.

[13] See pages 263, 264, *infra*.

In order to burn fuel oil efficiently, dispersion steam must be injected at the burner to atomize the fuel. Generally, fuel oil requires an increase of excess air over that required in burning natural gas. As a result, heating efficiency is reduced. The substitution of natural gas will require less excess air and combustion efficiency will be improved.

Fuel oil must be heated and circulated in order to keep the viscosity at a point acceptable to the type of burners installed at the refinery. If a firm supply of natural gas is available, a lighter grade oil could be kept in the lines (as a standby fuel) making it no longer necessary to incur the operating expense of heating the lines required when regular grade fuel oil is used. Less maintenance expense is required to keep the furnace burners and related equipment in efficient operating condition when natural gas is used as a refinery fuel.

No economic feasibility or cost study was introduced to show the dollar savings attributable to the foregoing advantages. As a result, Public Service contends that "Texaco has failed to prove the public interest requires or, indeed, even supports the granting of this certificate by neglecting to furnish satisfactory proof as to the economic advantages to it of the service it seeks." (Br., p. 25)

The decision to have its own produced gas transported for use in the refinery, instead of using locally produced fuels or in the alternative purchasing gas from Public Service, was made by corporate management on a broad company level. It involved many other departments in Texaco's integrated operation other than refining. Texaco considered its management work papers "highly confidential" and refused to produce them when requested to do so by Public Service (Tr. 528). Texaco's only witness was from the refinery department. Although he did not make an economic feasibility study, he testified, and the Examiner finds, that by utilizing natural gas Texaco would achieve approximately a 10 percent increase in combustion efficiency. Such increase in efficiency would be in addition to an increase in the capacity of the process heaters of two to three thousand barrels per day (Tr. 561).

The 10 percent increase in the combustion efficiency amounts to a 10 percent saving in the cost of liquid fuel being burned. The Eagle Point refinery is currently burning an average of 17,000 Mcf per day equivalent of fuel oil, or about 2,656 barrels.[14] This represents an annual consumption of fuel oil of approximately 970,000 barrels. The Examiner takes official notice that the "Daily Petroleum Price" section of the *Journal of Commerce and Commercial* shows the present cost of a barrel of Bunker-C fuel oil to be $2.35, assuming that no discount is given. On the basis of such cost, approval of the application would result in a savings of about $228,000 per year from an increase in combustion efficiency. The record does not permit of a finding in regard to the amount of savings which would result from the increased amount of refinery products, reduction in plant equipment, and elimination of certain items of operating and maintenance expense.

In response to Texaco's initial brief Public Service contended that the present price for a barrel of Bunker-C fuel oil is not in evidence. As subsequently shown in the "Pipeline versus Distributor" section of this initial decision, Public Service's own witness provided the basis for the Examiner's taking official notice of the posted petroleum prices in the *Journal of Commerce and Commercial.*

The Examiner finds that the decision to use natural gas was made after careful study and was based on the best judgment of its management. *Cf. American Louisiana Pipe Line Company*, Docket No. G–2306, *et al.*, Opinion No. 402, issued September 17, 1963, 30 FPC 698. The Examiner further finds that Texaco has proven by the facts of record herein (1) that it has a need for and will use firm and interruptible natural gas in the quantities set forth above, and (2) that an economic advantage will result to it if the service requested herein is approved.

---

[14] A barrel of fuel oil is equivalent to approximately 6.4 Mcf. The exact conversion factor might vary between 6.3 Mcf and 6.4 Mcf depending upon the Btu content of the respective fuels (Tr. 837–83.)

End-Use of the Gas and Preemption of Capacity

In *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1 (1961), Consolidated Edison Company (Con. Ed.) purchased natural gas from producers in Texas. It then contracted with Transco for the transportation of the gas to New York City. There it was to be used in Con. Ed.'s plant as boiler fuel in the generation of electricity. Transco's proposed rate schedule for such service was designated "X-20". The case is often referred to as the *X-20* case.

In the *X-20* case the usual Section 7 tests had been met. The Commission denied the application, and subsequently was upheld by the Supreme Court, primarily on three policy grounds, as stated by the Supreme Court at 365 U.S., page 5:

(1) "that the gas was to be transported for use under industrial boilers, this disposition being an 'inferior' use from the standpoint of conserving a valuable natural resource;

(2) "that authorization of this and similar direct sales to major industrial users would result in preemption of pipeline capacity and gas reserves to the detriment of domestic consumers competing for gas supply; and

(3) "that the effect of this sale, as well as the resultant increase in direct sales, would effect a general rise in field prices."

Con. Ed. contended that certification was in the public interest notwithstanding the foregoing because the use of a firm supply of natural gas would reduce the air pollution problem. It also contended that the policy considerations advanced by the Commission were outside the scope of a Section 7 proceeding, as held by the Court of Appeals in reversing the Commission. This was the principal question before the Supreme Court. It examined each of the policy arguments and held that they were of proper concern to the Commission. For purposes of analysis, the Court considered the three policy factors in two categories, as grouped by the parties, as follows:

> The first has been labeled the "end use" factor and reflects the Commission's concern that Con. Ed.'s proposed "inferior" use of gas under its industrial boilers would be wasteful of gas committed to the Commission's jurisdiction and, by the same token, would pre-empt space in pipelines that might otherwise be used for transportation of gas for superior uses. The second may be called the "price" consideration and involves the Commission's fear that this sale—which was executed at a price higher than the maximum fixed by the Commission in the producing districts here involved—would increase the price of natural gas in the field, thus triggering a rise in the price provisions in other contracts. (365 U.S. at 6–7)

After a consideration of the above, the Court held that although the Commission lacks a "comprehensive power to formulate a flat rule against sales for use under industrial boilers" it can "exercise a veto power over proposed transportation . . . when a balance of *all* the circumstances weighs against certification." (365 U.S. at 17) (Italic by the Court).

There is no contention here by any participant that natural gas from the areas in question is in short supply or that the proposed end use of the gas is an inferior use by Texaco within the meaning of the *X-20* case. In fact, one of Public Service's main points, as discussed subsequently, is that it should be permitted to serve Texaco the volumes proposed herein. Accordingly, it "does not oppose certification on the basis of the proposed end-use." (Br., p. 11) Nevertheless, it urges that the application should be denied because such "proposed service would involve the preemption of capacity which would otherwise be available for the use of domestic and commercial customers." (Br., pp. 11–12) The Supreme Court, however, limited its consideration to the preemption of "space in pipelines that might otherwise be used for gas for *superior uses.*" 365 U.S. at 7 (Underscoring supplied). There is no contention in this case that the gas is to be used for an inferior use. Therefore, the preemption point as asserted by Public Service has no validity.[15]

The primary basis for Public Service's reliance on the *X–20* case is its view that the proposal herein is no different from a purchase by an industrial company from a producer in the field. From this premise it argues that certain "plus" factors in the *X–20* case are not present here,[16] and that since it was not in the public interest to certificate the *X–20* case it is not in the public interest to grant approval of the instant proposal.

The premise, however, is faulty. This will be shown in the following discussion of the field price question.

Field Price Increase

Public Service contends that approval of this transportation agreement would constitute an attractive regulatory gap. In support of this point Public Service relies upon the following cases: *Texas Eastern Transmission Corp.*, 29 FPC 692 (1963) (the "Rayne Field" case); *Tennessee Gas Transmission Co.*, Docket No. CP61–106, *et al.*, Opinion No. 413, issued December 12, 1963, 30 FPC 1477 (the "Bastian Bay" case); and also the *X–20* case.

The agreement herein involves a proposal by a bona fide producer to use its own gas which was produced in the normal course of its business. As a consequence the cited cases are inapplicable because there is (1) no sale of gas as in the *X–20* case, and (2) no arrangement by which producers convey leasehold interests in natural gas fields (*Rayne Field* and *Bastian Bay* cases). The simple fact is that Texaco desires to use its own produced gas for its own economic use. Public Service, however, insists that unless some "price" or "value" is attributable to such gas, substantial gas reserves will move in interstate commerce at a "value" which is not, and should be, known to the Commission (Br., pp. 32–33). It appears that Public Service desires to compare the "value" with the "in-line" prices established for Louisiana and Texas Railroad Commission District No. 4. Such a comparison is immaterial to a decision herein. The Examiner concludes that effective price regulation does not, in this case, require a knowledge of the "value" of natural gas produced by Texaco for its own use.

Elizabethtown Consolidated refers to the *X–20* case and urges that the Commission consider the "end use" of the proposed service. Its point is limited to a contention that under the proposal herein there is no prohibition on Texaco from selling the gas when it receives redelivery in New Jersey. Public Service also refers to the fact that in the *X–20* case Consolidated Edison agreed not to resell the gas it purchased from producers in Texas. This resale contention will be considered in the "Pipeline versus Distributor" section of this initial decision.

---

[15] Even if it were alleged and found that the gas was to be used for an "inferior" purpose, the preemption argument would not obviate approval herein because Transco is willing to sell and deliver to any of the present customers, under its currently effective rate schedules, any quantity of gas which such customer may contract to buy and is also willing to construct the necessary facilities to deliver such gas over and above the facilities needed to provide the proposed service herein.

[16] Such as, (1) Con. Ed. had to take-or-pay-for 50,000 Mcf per day, (2) for 60 days each year the transportation would be interrupted and Transco would sell 50,000 Mcf per day to Con. Ed. for resale to consumers for peaking service, (3) the air pollution problem, and (4) Con. Ed.'s agreement not to resell any of the gas it purchased in Texas.

AVAILABILITY OF CAPACITY

Firm Service

No participant contended that Transco would not have adequate pipeline capacity to render the proposed firm transportation service for Texaco if the facilities proposed in the application were all approved. As shown, the major portions of such facilities have been approved in Docket No. CP64–96. In fact, the only pipeline construction now remaining to be authorized is an 8-inch lateral connecting Transco's line to Texaco's source of supply. Transco was also authorized in Docket No. CP64–96 to increase its service to existing customers by 53,663 Mcf per day, consisting of 43,845 Mcf per day of pipeline service, 8,818 Mcf per day of storage service, and 1,000 Mcf per day of liquefied natural-gas service. Although it was not authorized to render any service to Texaco, the effect of the approval in Docket No. CP64–96 is to authorize Transco to construct facilities which will have enough capacity in excess of the increased firm demands of other contract customers to provide the Texaco firm service. This is shown clearly by reference to the respective flow diagrams.

The proposed Texaco redelivery will be made from a loop line referred to as the Marcus Hook-Trenton loop line.[16a] Exhibit 16 in the present case is a flow diagram showing the operating conditions on such loop line when the system is operating at maximum *winter* day capability, with the then proposed 11.08 miles of 30-inch loop line installed. It was designed to reflect delivery by Transco of all firm obligations to its customers, including Texaco. The comparable exhibit in Docket No. CP64–96, which also includes Texaco, is Exhibit G attached to the application. No facilities in addition to the 11.08 miles of 30-inch loop line are shown on Exhibit G. The total of all the customer deliveries on the Marcus Hook-Trenton loop line shown in Exhibit 16 is shown as 488.339 MMcf. In Exhibit G it is shown as 488.445 MMcf.

Exhibit 17 in the present case is similar to Exhibit 16 referred to above but shows the operating conditions when the system is operating at maximum *summer* day capability. The comparable exhibit in Docket No. CP64–96 is Exhibit G–1A to the application. A similar total of all customer deliveries shown in Exhibit 17 is 239.299 MMcf. In Exhibit G–1A it is shown as 225.598 MMcf. The Examiner finds that as a result of the Commission's order in Docket No. CP64–96 Transco now is authorized to construct firm pipeline capacity sufficient to provide firm transportation service to Texaco in the amount of 8,000 Mcf per day.

Interruptible Service

As one of the main bases asserted for approval of its application Transco states that the proposal herein for interruptible service would utilize idle capacity and thereby aid it in operating its system at the highest possible load factor. Public Service, however, contends that Transco has not shown that the proposed interruptible delivery will improve its load factor "in a manner consistent with and required by the public interest." (Br., p. 4) In other sections of its brief Public Service has emphasized the word "required" in the statute. Such reference requires preliminary comment.

[16a] The Marcus Hook-Woodbury loopline previously referred to is a part of this Marcus Hook-Trenton loopline (Tr. 629).

In deciding whether or not the application should be granted, the Examiner must make a finding that the application is required by the present or future public convenience and necessity. The finding must be determined by weighing all the facts and circumstances of each case. It does not mean "indispensably requisite." *Transcontinental Gas Pipe Line Corporation*, 17 FPC 360 (1957).

Insofar as "transportation" only is concerned, the Supreme Court has held that the Commission can "exercise a veto power over proposed transportation [but] it can only do so when a balance of *all* the circumstances weighs against certification." (Italics by the Court.) *F.P.C.* v. *Transcontinental Gas Pipe Line Corporation*, 365 U.S. 1, 17.

It is within the framework of the foregoing that the load factor, and other contentions, are now considered.

Public Service contends that Transco has not supported its assertion that the proposal would utilize idle capacity because the record is devoid of "detailed information as to how this [interruptible] service was to be undertaken and as to the practical degree of interruptibility which was contemplated." (Br., p. 4) it complains that the record made at the hearing in regard to load factors was admittedly stale and prevented it from ascertaining if a sufficient "valley" was created by the failure of the firm contract customers in Zone 3, which includes New Jersey, to use their contract demands.[17] It proceeded, however, to develop figures from such evidence in an attempt to show that there was not a sufficient "valley" created in Zone 3 to service the Texaco interruptible service; that such service would have to use capacity in Zone 3 reserved for future firm customers; and that as a result the existing firm customers would be put into the position of subsidizing the transportation service.

Transco did not object to the use of such figures. In fact, it contended that figures from the same exhibit showed that a valley existed in Zone 3 as of April 1963 sufficient to service Texaco and its other interruptible deliveries. The Commission's order in Docket No. CP64–96 obviates a finding concerning either Public Service or Transco's conclusions based upon the April 1963 data. The order does, however, provide more recent data by which a determination may be made concerning the load factor issue. The Examiner has used certain exhibits attached to the application in Docket No. CP64–96 as the basis for the following findings: (1) that upon the completion of the facilities now authorized by the Commission's order dated April 17, 1964, in Docket No. CP64–96, there will be annual unused firm contract capacity in Zone 3 sufficient to serve the 1965 estimated interruptible transportation proposed for Texaco; and (2) that Transco's load factor will be improved. The facts will be developed in the general manner used by Public Service and Transco in their briefs.

The Zone 3 facilities for the proposed service are designed on a summer day basis. The summer day capacity required to serve Transco's firm contract customers in Zone 3, as approved in Docket No. CP64–96, is 1,227.8 MMcf.[18] Such figure is converted to a winter day basis by dividing it by the temperature factor of 94.7 percent. As a result, the capacity required on a winter day basis is 1,296.6 MMcf. The daily average capacity in Zone 3 would be 1,262.2 MMcf. On an annual basis this would be 460,707.0 MMcf.

---

[17] The problem arose as follows: As Supplement No. 1 to its application Transco filed "Exhibit N" entitled "Revenues, Expenses and Income." (Item B by reference.) This exhibit includes the data required by an applicant under Section 157.14(a)(16) of the regulations and, among other things, shows the estimated annual deliveries to its customers for a three-year period. This data, however, was filed in April 1963 and the hearing was held in November 1963 through January 1964. The data in Exhibit N was not brought up to date. Transco's attorney at page 622 of the transcript stated as follows:

> I would like to state also that the condition shown on Exhibit N to the application, which was filed back in April, are not the same conditions which have been proposed in the evidence presented by Transco in this proceeding.

The estimated 1965 annual purchases by all firm contract customers in Zone 3 (excluding Texaco) is 442,111.8 MMcf.[19]

By deducting the estimated requirement of 442,111.8 MMcf from the total annual volume of 460,707.0 MMcf, it is found that there is 18,595.2 MMcf available as a "valley" for non-firm or off-peak deliveries in Zone 3. This valley would then be reduced by the estimated interruptible transportation volume for Sun Oil Company of 9,125.0 MMcf (Tr. 624), which would then leave a remaining valley of 9,470.2 MMcf.

Transco has obligations under its GSS Rate Schedule to transport up to 4,692.5 MMcf into Zone 3 during the summer months for storage injection for customers in Zones 1 and 2 (Exhibit N, page 8, to the application in Docket No. CP64–96). This is an increase of 117.5 MMcf from the quantity referred to in the instant proceeding at transcript page 623 and in the briefs by Transco and Public Service. This reduces the valley created by the firm contract customers in Zone 3 to 4,777.7 MMcf. Texaco's estimated annual use of interruptible gas is 3,285.0 MMcf (Exh. 7, p. 1).[20]

Cheap Expansibility

Public Service contends that "Transco has preempted its 'cheap expansibility' in order to benefit Texaco to the detriment of its distribution customers." (Br., p. 13) The Examiner finds no merit to Public Service's contention because it draws no distinction between use of idle capacity for non-jurisdictional purposes and a use that is wholly jurisdictional. Public Service urges, in effect, (1) that the firm capacity should be treated as held in reserve for the future expansion needs of the present jurisdictional customers, and (2) that approval herein would not be in the public interest unless such customers were compensated presently for the preemption of such "cheap expansibility" by new jurisdictional customers. It relies upon *Mid-America Pipeline Company* v. *Federal Power Commission*, 330 F. 2d 226 (CADC), No. 17717, decided February 20, 1964.

X–11	10, 585. 0
S–2	11, 670. 0
	442. 111. 8

[20] The Texaco and Sun annual interruptible uses are shown in Exhibit N to the application in Docket No. CP64–96 as 1,460.0 MMcf and 10,950 MMcf, respectively. The later testimony in Docket No. CP63–222 shows that the Texaco estimate was increased by 1,825 MMcf and the Sun estimate decreased by the same amount. Accordingly, the end result as to the "valley" in Zone 3 is the same.

The principle of "cheap expansibility" was first established in *City of Pittsburgh* v. *Federal Power Commission*, 237 F. 2d 741 (CADC). In that case the Texas Eastern Transmission Corporation (Texas Eastern) was authorized to abandon its Little Inch pipeline between Baytown, Texas, and Moundsville, West Virginia, as a natural-gas pipeline. The purpose of the abandonment was to make the Little Inch pipeline available for petroleum products. The company's system also consisted of a 24-inch Big Inch pipeline and a 30-inch Koscuisko pipeline. The latter had idle capacity. As a substitute for the natural-gas capacity in the Little Inch line, the Commission approved the transfer of its natural-gas load to the 30-inch Koscuisko line. The Texas Eastern system would then have operated at capacity but would have had no facilities available for expansion. (The order also authorized construction of (1) a necessary connecting line to the Koscuisko line (referred to as a "tie-line") and (2) additional compression facilities on the Koscuisko line.)

Certain consumers contended that as a result of the Commission's order the next block of expansion for them would require looping of the Koscuisko line which "would entail an increase in the rate base to gas consumers based upon the costs of [such] looping as well as the cost of the tie-line". (237 F. 2d at 750) The consumers asserted that they were entitled to the benefit of the less "expensive expandibility" then existing on the Koscuisko line. The court held that the Commission should have considered the consumer's contentions. It remanded the case to the Commission for that purpose, among others.

In the *Mid-America* case the applicant before the Commission was the Northern Natural Gas Company (Northern Natural). The Mid-America Pipeline Company (Mid-America) was an interstate common carrier of natural-gas liquids and subject to regulation only by the Interstate Commerce Commission. Northern Natural, in addition to its natural-gas pipeline system, owned a subsidiary company engaged in the extraction, transportation, and sale of liquid petroleum. Northern Natural requested authority to construct and operate additional facilities costing some $3,885,800 and to transport approximately 900,000 Mcf of gas per day to the extraction plant.[21] There, liquid petroleum gases would be extracted from the gas stream and the residual natural gas then returned to the main transmission line.

Among other things, Mid-America contended that the Commission's order would result in a non-jurisdictional business preempting the existing low-cost, unused capacity of the Northern Natural system; that the existing customers would eventually require such capacity; and that they would have to replace it at higher costs. This phase of the matter was the subject of a settlement agreement between Northern Natural and its utility customers. It provided, in part, for an additional 5.5 cents reduction in demand charges on a uniform basis in all of the zones in Northern's system and amounted to $1,000,000 per year. The Commission found that "this substantial reduction in rates [was] a satisfactory interim compensation for any loss of cheap expandability until such loss [could] be more accurately measured."[22] The "measurement" would be made in some future rate case. The court affirmed the Commission and thereby rejected Mid-America's argument that under the Commission's order Northern Natural would be enabled to improperly subsidize its liquid gas business by loading part of the extraction operating costs onto its jurisdictional natural-gas customers.

---

[21] As previously shown, the Commission in Docket No. CP64-96 has approved the construction of pipeline capacity sufficient to serve the 8,000 Mcf of firm transportation requested in this proceeding, and thereby eliminated from consideration herein all but about $600,000 of an estimated $4,858,000 in construction costs.

[22] *Northern Natural Gas Company*, 29 FPC 450, 451.

The *City of Pittsburgh* and *Mid-America* cases show that the principle of compensation for loss for cheap expansibility applies only where the idle firm capacity is to be used by a non-jurisdictional facility. Stated differently, the principle is inapplicable to the situation presented by either a new jurisdictional customer coming on the line or an existing jurisdictional customer increasing its contract demand. The reason is clear. In neither of such cases is there any doubt that the full allocated costs, based upon the latest rate proceeding, will be recovered by the new service.

Here, as pointed out by Transco, "the proposed transportation service for Texaco is wholly subject to Federal Power Commission jurisdiction . . . ." (Initial Br., p. 10) This fact is reflected in the initial rate proposed to be charged for the firm transportation service herein. It is precisely the same as the jurisdictional rate charged Transco's firm contract customers in Zone 3, exclusive of the cost of purchased gas. It will, therefore, provide the same revenue, minus the purchased gas cost, as would a sale for resale to an existing customer under the CD-3 Rate Schedule. Accordingly, all existing Transco customers will be benefited.

Furthermore, in the event the demand or commodity charges in Transco's CD-3 Rate Schedule are changed during the term of the contract, the prices to be paid by Texaco to Transco for firm service will also be charged similarly, with the commodity charge priced at the difference between the commodity charge in the revised rate schedule and the average cost of purchased gas.

Preemption of Priorities

(a) Excess Storage Gas and Interruptible Transportation Service: The record shows that the Texaco interruptible transportation service is to be granted priority over excess gas presently available to General Storage Service (GSS) customers. Public Service contends such fact is not consistent with the public interest.

If Transco has the capacity available, firm contract customers have the right to obtain excess storage gas over and above their daily firm storage entitlement. The excess GSS rate is 71.8 cents per Mcf, or if taken from the customer's storage balance, a 40.5 cents per Mcf service charge. (The rate for interruptible transportation for Texaco is 22 cents per Mcf.) The GSS gas is valued greatly by the customer because it can be substituted for peaking gases. In reply to Public Service's contention Transco stated that it would be its "policy to give priority to excess GSS service." (Reply Br., p. 15) The order herein will contain a condition to this effect.

(b) Firm Storage Service and Firm Transportation Service: Transco agreed to accept the following condition, which was first proposed in the Third Supplement to its application (Item D by reference):

> The certificate issued hereby is granted on the express condition that the firm and interruptible transportation services authorized herein shall be subject to curtailment and interruption if required to meet the existing or future contracted maximum daily delivery obligations of Transco for firm resale service to its customers.

It is not clear from the testimony whether or not Transco, by this condition, agreed to cut off firm transportation to Texaco in order to supply the storage customers firm requirements. As a result, Public Service contends that the condition "has almost no value to Transco's distribution companies." (Br., p. 17)

In its reply brief at page 15 counsel for Transco stated that it interpreted the condition in Item D by reference as requiring that both the firm and interruptible service to Texaco be interrupted "in the event that a force majeure situation rendered Transco otherwise incapable of rendering the contracted GSS service to its customers." The order herein will modify the condition set forth above to reflect this interpretation.

RATES AND ECONOMIC FEASIBILITY

The initial rates proposed herein are the same rates charged Sun Oil Company for similar transportation service. The firm transportation rates are the same, exclusive of the average cost of purchased gas, as the rates for the firm contract customers in Zone 3. The interruptible rate provides, at 100 percent load factor, nearly the same contribution to fixed costs, as does the firm rate.

As previously shown, facilities representing only about $600,000 of an estimated $4,858,000 in construction costs remain for consideration herein. The Examiner takes official notice pursuant to Section 7(d) of the Administrative Procedure Act (60 Stat. 241, 5 U.S.C. Sec. 1006) that 20 percent of estimated construction costs will, as a working estimate, equal or exceed the incremental cost of service. On such basis, the incremental cost of service here would be some $120,000. The annual *firm* revenue of $643,668 obviously is sufficient to meet any test of economic feasibility and also to provide a substantial contribution to existing system costs. (As subsequently shown, interruptible revenues are estimated to be $722,700. When the construction costs were estimated as $4,858,000, Public Service contended that the project might not be economically feasible because there was no assurance that Texaco would deliver any interruptible gas to Transco. The aforesaid findings render this contention moot.)

The Examiner finds, for the reasons detailed below, that the initial firm and interruptible rates proposed herein are consistent with the public interest and that the project would be economically feasible, on both an incremental and system basis, if no interruptible deliveries were made. No justification has been shown for requiring that "just and reasonable" rates for the transportation herein be determined in this proceeding.

Although Public Service's contentions concerning the interruptible transportation rate and associated economic feasibility argument are now moot, the contentions and associated facts will be set forth so that findings in connection with its other contentions may be made.

In a rate settlement approved by the Commission by order issued February 2, 1962 in Docket No. RP61-13, 27 FPC 187, Transco's system rate of return was not specified. However, at page 13 of its reply brief Transco states that the rate of return on the average investment per Mcf on its system was 6.32 percent. The estimated incremental rate of return attributable to the proposed service prior to the order in Docket No. CP64-96 was 12.64 percent. This rate of return was based upon the transportation of firm and interruptible gas at 100 percent load factor. A gross investment in facilities of $4,858,000 was used in the calculation. Interruptible operating revenues were estimated to be $722,700. Public Service challenged this latter figure because Texaco has no obligation to tender any interruptible gas to Transco for delivery. This will be the subject of further discussion.

Exhibit No. 7 shows the estimated annual volumes, revenues, and rates which provide the basis for the 12.64 percent rate of return. They are as follows:

Particulars (1)	Maximum demand (2)	Annual billing demand (3)	Annual deliveries (4)	Annual revenues [a] (5)
Rate Schedule X-37:				
Firm	8,000	96,000	[b] 2,920,000	$643,668
Interruptible			[c] 3,285,000	722,700
Total	8,000	96,000	6,205,000	1,366,368

[a] Rates used in computing revenues:

	Demand	*Commodity (cents)*
Firm	$3.94	9.0
Interruptible		22.0

[b] 8,000 Mcf multiplied by 365 days.

[c] 9,000 Mcf multiplied by 365 days.

The rates proposed by Transco, as shown above, are set forth as part of Transco's "Pro-Forma Rate Schedule X-37", designated as Exhibit 8 herein. They are the same rates as are contained in the agreements between Transco and Sun Oil Company for a transportation service by Transco from certain points in Transco's gas supply area, including Texas and Louisiana, to Sun's refinery at Marcus Hook, Pennsylvania. Both refineries are located along Transco's Marcus Hook-Woodbury loop line. Marcus Hook is located on the west side of the Delaware river, whereas the Eagle Point refinery is just to the east of that river.[23]

The Sun agreements are on file and effective as Transco's Rate Schedule Nos. X-1 and X-11 to Volume No. 2 of its FPC Gas Tariff. They provide, respectively, for rates of 22 cents per Mcf for the interruptible transportation service[24] and 22.04 cents per Mcf for the firm transportation service at 100 percent load factor. (The latter figure is obtained by converting the Zone 3 monthly demand charge of $3.94 per Mcf of demand and adding it to 9.09 cents, which is the difference between the CD-3 commodity charge and the average cost of purchased gas.) The interruptible rate is the same as the initial rate which was approved in 1948. The firm service rate varies with the rate applicable to Transco's resale customers in Zone 3 (CD-3), less the cost of purchased gas. Neither rate has been the subject of a just and reasonable determination under the Act. Both rates, however, have been included in the several Transco rate-settlement proceedings through the years. The latest Transco settlement orders appear at 14 FPC 1075, 24 FPC 888, and 27 FPC 187.

If all the proposed facilities remained for consideration in this case, and if the firm and interruptible rates were approved, the proposed service obviously would be economically feasible on an incremental basis since it shows that a return of 12.64 percent would be earned on the additional facilities at 100 percent load factor operation.

---

[23] In Docket No. G-704, Opinion 165, 7 FPC 24, Transco was authorized on May 24, 1948, to transport for Sun not more than 60,000 Mcf at 16.7 psia daily on an interruptible basis at 25 cents per Mcf.

In Docket No. G-2368, 13 FPC 1006, Transco was authorized on April 30, 1954, to transport 10,000 Mcf per day of gas on a firm basis from Sun's own supply to its refineries at Marcus Hook, Pennsylvania. On September 12, 1955, the said firm transportation service was increased to 20,000 Mcf per day (Docket No. G-9035, 14 FPC 333).

On November 17, 1959, an additional 9,000 Mcf of similar firm transportation service for Sun was authorized (Docket No. G-16603, *et al.*, 22 FPC 836).

[24] Rate Schedule X-1 provides for a rate of 25 cents per Mcf at a pressure base of 16.7 psia. Conversion of this rate to a pressure base of 14.7 psia, at which Transco's other rates are stated, gives a 22 cent per Mcf price.

When tested on an overall system basis, the proposed service make a substantial contribution to system fixed costs and, since the proposed service is wholly jurisdictional, will benefit all of Transco's customers. This is shown clearly by the following testimony of Transco's rate witness:

> As I previously mentioned the rate for firm transportation service for Texaco is the same as the currently effective rate for firm resale service in the same Zone 3 less the cost of gas included in such resale rate. The cost of firm service provided, therefore, is fully compensated for by the rate charged for such service and consequently is not disadvantageous to Transco's other customers.
>
> * * * * * * *
>
> Second, and very important, is the fact that the rate of 22.0¢ per Mcf for the interruptible transportation service, which is only 4/100 of one cent per Mcf less than the rate for firm service at 100% load factor, provides a substantial contribution to the fixed costs of Transco's system. My basis for making this statement is a comparison of the sales rate of 29.0¢ per Mcf for excess gas sold in the same Zone 3 under Transco's Rate Schedule E-3 with the 22.0¢ per Mcf for the interruptible transportation service herein proposed. Transco's currently effective E-3 rate after deducting the average cost of gas included therein, provided approximately 11¢ per Mcf to pay for the variable costs and makes a contribution toward the fixed costs of Transco's system. In Docket No. RP61-13, Transco's exhibits show that the variable costs on the Transco system, exclusive of cost of gas, amount to approximately 2¢ per Mcf. Thus the E-3 rate includes 9¢ per Mcf as a contribution to the fixed costs. The proposed interruptible transportation rate, using the same variable system cost of 2¢, therefore includes approximately 20¢ per Mcf as a contribution to the fixed costs on the system, this being 11.0¢ per Mcf more than the contribution provided in the E-3 rate, (Tr. 138-39)

There is no issue in regard to the propriety of the rate proposed for the firm transportation. A substantial question was raised concerning the interruptible rate.

Public Service challenges the reasonableness of the interruptible rate on the following grounds: (1) that the proposed transportation service differs in many material aspects from the Sun transportation agreement which, contrary to Transco's contention, cannot be used as a basis upon which to judge the reasonableness of the proposed rate; (2) that the benefits to Texaco are unduly preferential and discriminatory; and (3) that in the absence of a contract provision giving Transco the "right to file" for an increase in the interruptible rate the rates must be "just and reasonable *ab initio*" in order to give adequate protection to consumers (Br., p. 18).

The Sun Agreement

Public Service contends that circumstances have materially changed since the Sun transportation was certificated and therefore it cannot be a precedent for this proposed service. The main point is that without the Sun transaction Transco's initial certificate to serve the northeastern states might not have been issued since "it was hampered by the substantial dependence on sales of boiler fuel for load balancing purposes. The alleged major change since then "has been the initiation and expansion of underground storage in western

Pennsylvania which has removed the pressure for the load balancing devices which had to be adopted in the early stages of the pipeline expansion." (Br., pp. 22–23) The Examiner, however, has found previously that the need for a "load balancing device" still exists.

Public Service next contends that the form of gas dedication constitutes a "significant" difference between the Sun and Texaco agreements. The Sun interruptible volumes are supplied from reserves dedicated to Transco's system under gas purchase contracts.[25] No specific reserves are dedicated by Texaco and it has no obligation to maintain reserves for interruptible transportation and may discontinue offering any interruptible gas at any time. Public Service asserts that under the Sun contract the capacity dedicated to transporting the interruptible gas is available and useful for the life of the reserve; whereas under the Texaco contract Transco is obligated to construct and maintain gathering and metering facilities which may not be used in large part if Texaco elects not to offer any interruptible gas for delivery or its reserves are depleted.

In effect, therefore, Public Service contends that Transco needs the interruptible transportation in order for the project to be economically feasible and that under the terms of the agreement Texaco could refuse to deliver any interruptible gas to Transco, thereby resulting in a substantial loss of revenue and a consequent burden on ratepayers. Since most of the facilities proposed in this case have already been approved in Docket No. CP64–96, this contention is now moot. Furthermore, the fear that Texaco will not deliver the interruptible gas is unfounded. As shown previously, the Examiner has found that there is a need for both the firm and interruptible service. Also, under the Sun agreement, as shown in Rate Schedule X–1 to Transco's FPC Gas Tariff, Original Volume No. 2,

> Sun, at its option, may cancel [the] agreement during said twenty (20) year term set forth in paragraph "6" at any time by giving Trans-continental one year written notice prior thereto if Sun obtains "firm" delivery of natural gas from its own or other pipe line facilities at or near Marcus Hook.

Obviously, if Sun exercised its option Transco would incur a loss of revenue if it did not have a market for the gas it is required to purchase under the gas purchase contracts. This possibility is not materially different from the possibility that Texaco might tender no interuptible gas to Transco. It did not deter the Commission from approving the X–1 service. The Examiner finds that the form of gas dedication does not constitute a significant difference.

Public Service also contends that other differences between the Sun interruptible transportation agreement and the proposed service herein are such that the rates in the Sun agreement cannot be used as a basis for finding the instant rates consistent with the public interest.

It states that the Commission pointed out in Opinion 165 (7 FPC 24) that the Sun transportation feature would tend to alleviate a then existent fuel oil shortage which is not present today. In addition, it referred to the following testimony of its witness:

> He first outlined the conditions in the industry which no longer hold, mentioning "the great unsatisfied hunger for natural gas in the eastern

---

[25] The opinion which accompanied Transco's authorization to render the Sun service explained the matter as follows:

The gas to be transported for Sun Oil Company will be obtained from its natural gas reserves which have been committed to Trans-Continental under gas purchase contracts * * *. To the extent that natural gas is transported to the account of Sun Oil Company, Trans-Continental will be released from an obligation to take gas from Sun Oil Company under the gas purchase contracts (7 FPC 24, 34).

> market", "the twenty-year reserve life requirement", and the Commission taking "a restrictive attitude toward massive sales of gas for steam generation particularly in electric generating plants". He also pointed out "the comparatively low field price of gas in the face of coal and oil costs not too different from today", which obviously made the burning of gas as boiler fuel much more attractive than at present. (Br., p. 21)

Public Service notes that the quoted conditions related to Transco obtaining an initial certificate and states that the Sun transactions were apparently an essential feature of the Transco project if it were to succeed at all. As previously shown, however, one of the main reasons for the Sun service was to improve the load factor. The same reason prevails today. The Examiner finds that the other differences enumerated by Sun are not material to a consideration of the rate issue; and that it is proper to use the Sun agreement as a basis for finding the instant rates consistent with the public interest.

Right To File for Rate Changes

Public Service fears the situation presented by Transco's inability to unilaterally change the terms of the contract in the event this Commission in some later proceeding determines that the terms and conditions for interruptible service are unduly discriminatory or preferential.[26] It recognizes that the demand-commodity charges in the proposed firm rate automatically change with any change in the transportation component of Transco's CD–3 rates (Br., p. 23). It contends, however, that a "right to file" provision should likewise have been inserted as to the interruptible rate.

As a result of the *Mobile* principle, and the absence of Commission power to order a retroactive rate, Public Service contends that adequate protection for consumers "in this situation requires that the proposed rates be just and reasonable *ab initio*" (Br., p. 18). In support of this contention it cites *Texas Eastern Transmission Corp.*, 24 FPC 364, affirmed *sub nom. Ohio Fuel Gas Co.* v. *F.P.C.*, 296 F. 2d 594 (CADC); *El Paso Natural Gas Co.*, 26 FPC 687, 688; *Transcontinental Gas Pipe Line Corp.*, 21 FPC 141, fn. 3; and *Texas Eastern Transmission Corporation*, Docket No. G–12446, *et al.*, Opinion No. 378, 29 FPC 249; affirmed, 381 U.S. 392 (1965) (the Rayne Field case).

These cases support the proposition that where unusual circumstances exist, such as the probability that the initial rates would result in losses which would have to be passed on to the consumers, the Commission will conduct a careful examination into rates. In an ordinary certificate case, however, it serves no useful purpose to present the initial rate question in terms of the detailed requirements of Section 4 of the Natural Gas Act. *Texas Eastern Transmission Corp., supra*, at 366. The determination of "[j]ust how far examination into rates should be allowed in a certificate proceeding depends upon a careful weighing of all relevant circumstances. . . ." *El Paso Natural Gas Co., supra*, at 688.

The relevant circumstances here are (1) the rendering of similar interruptible service for Sun since 1950 at the rate proposed herein; (2) the inclusion of such rates in Transco's various rate settlements; (3) the fact that there is no "right to file" provision in Transco's interruptible tariff applicable to the Sun transportation; (4) the economical feasibility of the instant project without reference to the revenues from the interruptible service; (5) the lack of "high potential outlays for construction and large volumes of sales of gas" (*El Paso Natural*

---

[26] In *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332, the court held that the Natural Gas Act gives a natural-gas company no power to change its contracts unilaterally. Under Section 5(a), however, this Commission has power to modify the rates in a contract if in the public interest to do so. *F.P.C.* v. *Sierra Pacific Power Co.*, 350 U.S. 348.

Gas Co., supra, at 688); (6) the service is to be rendered out of excess capacity; (7) there is no obligation by Transco to deliver any volumes of interruptible gas; and (8) only 2 cents per Mcf of the total 22 cents per Mcf represent the variable cost of rendering the service. These facts support the finding, which is hereby made, that adequate protection for the consumers on Transco's line does not require that the proposed rates be found just and reasonable *ab initio.*

Unduly Preferential and Discriminatory

Public Service contends that Transco has failed to justify the proposed rate and the conditions of service at which it proposes to make the interruptible service available to Texaco (Br., p. 17). It has been shown previously that the initial rate proposed for the interruptible service is consistent with the public interest. The question now is whether the benefits to Texaco are unduly preferential and discriminatory as alleged by Public Service.

Public Service's basic complaint is that the flexibility offered to Texaco has never been offered to any of Transco's distribution customers. Different treatment is justified here, however, because of the material differences between the transportation services here considered and the sale of gas to the distributors for resale. Not all difference in treatment is illegal under the Act, but only unjust, unreasonable, or undue discrimination. *Michigan Consol. Gas Co.* v. *Federal Power Commission*, 203 F. 2d 895, 901 CA–10); *Carolina Pipeline Company* v. *Southern Natural Gas Co.*, Docket No. RP63–4, Opinion No. 423, decided March 30, 1964, 31 FPC 705. The Examiner finds that the differences set forth herein below, and elsewhere in this initial decision, are not unreasonable.

The Texaco normal interruptible service will be utilized in a manner similar to that which has recently governed the Sun transportation service (Tr. 533–534, 552). The number of days of curtailment were stated to be as follows:

> With respect to the interruptible transportation service however, there may be as many as three to five days of complete interruption during the first 12 months of the transportation service.
>
> In addition, there may be as many as 30 non-consecutive days on which the deliveries to Texaco might be partially curtailed based upon our 12 months past experience in transporting interruptible gas for Sun Oil Company.
>
> At this time there is no accurate method of determining the exact number of days on which the interruptible service to Texaco will be completely interrupted or curtailed. (Tr. 333)

Texaco contemplates substantial winter usage of interruptible gas. From this fact Public Service reasons that Texaco will be receiving interruptible service at a substantially lower cost than would be the case were it priced at the CD–3 rate under which interveners now purchase the bulk of their gas, and the storage rates for firm service also available to them. The record supports this contention. As shown above, however, the two classes of service are materially different. Furthermore, Transco has had no request from its distribution customers to buy interruptible gas at a rate which could be comparable to the Texaco interruptible transportation rate. As noted by Transco in its brief, Public Service might have had a valid argument if Transco had refused to sell interruptible gas "to its customers at a comparable price and under comparable terms and conditions. . . ." (Reply Br., p. 20)

Public Service also alleges that the terms of the agreement result in unjust benefits to Texaco because, among other reasons, Texaco can reduce its takes under the firm portion to 5,200 Mcf per day and can reduce its interruptible takes to zero. The contention that Texaco may take only the minimum firm quantities, and that it may not offer interruptible gas for delivery is based upon speculation only. The substantial evidence of record shows that Texaco has a need for, and will use, all the firm and interruptible gas it has requested Transco to transport.

OTHER PUBLIC INTEREST CONSIDERATIONS

Pipeline versus Distributor

Public Service vigorously contests approval of the instant application because it would allegedly remove Texaco as a potential customer thereby causing it to lose certain valuable cost benefits associated with the sale of interruptible gas.[27] In effect, it urges that as matter of policy a gas distributing company should not be required to compete with its own pipeline supplier for wholesale or industrial business within that area, even though the industrial customer proposes to use its own produced natural gas. The reason advanced by Public Service for this policy, and the usual reason in pipeline versus distributor cases, is to assist the distributor in improving its load factor, thereby reducing the unit cost of gas and enabling it to maintain lower rates for its customers. *American Louisiana Pipe Line Co.*, 20 FPC 575, 588, 592; *Southern Natural Gas Company*, 25 FPC 925, 926. Public Service also contends that certification of the proposal herein would create a precedent which would cause others to conclude similar agreements and thereby increase the loss of cost benefits to itself and other distributors.

Elizabethtown Consolidated was primarily concerned with the authorization of transportation service for the producer-owner of gas for "its use *or distribution of gas* in the service area of a local distributing company." (Br., pp. 3–4; italic supplied)[28]

Transco takes the position that this case does not present the issue of distributor versus pipeline because Public Service is *not* ready, willing, and able to furnish Texaco's natural-gas requirements at a price which would warrant a switch by Texaco from its present fuel oil uses to the use of natural gas.[29]

Staff also takes the position that there is no distributor versus pipeline issue in this case. It contends that the price Public Service "would charge is uncertain" and therefore "Public Service has not met the proof required" by the Commission in the *Southern Natural* case, *supra* (Br., p. 19).

Public Service construes Staff's position as requiring Public Service to prove that it should be authorized to make the service for Texaco. It states that it has no competitive alternative application for this service, and that the burden of proof does not shift to it. Elizabethtown Consolidated also referred to Staff's position as shifting the burden of establishing public convenience and necessity to Public Service. No citation of authority is needed for the proposition that the burden of proof does not shift. However, the burden of going forward with the evidence does shift. This was the point made by Staff in its brief, and by the Commission in the *Southern Natural* case, *supra*.

---

[27] In view of the finding herein below that Public Service could not offer Texaco an "attractive" price for the volumes Texaco needs (Tr. 779), it is immaterial to a decision in this case that Public Service would receive certain cost benefits were it to provide the service. (The extent of such cost benefits was the subject of conflicting and imprecise testimony. See Public Service's brief at pages 3 and 4, Texaco's reply brief at pages 6 and 7, and Tr. 771, 804, 806, 825, 845–846.)

[28] The application herein request authority to transport Texaco-produced gas for Texaco's own use. Authority to transport gas to Texaco for resale is not requested and will not be approved. Contrary to Elizabethtown Consolidated's position, approval of transportation of gas for Texaco's own use is in effect a prohibition on Texaco from selling all or part of the gas it proposes to have transported. No condition to this effect need be attached. See order issued March 25, 1964 in *Sabine Pipe Line Company,* Docket No. CP64–97, 31 FPC 696. Accordingly, Elizabethtown Consolidated's contention that Texaco may resell the gas to a chemical company, or others, will not be considered further.

[29] If such an issue were presented, Transco states that "the Commission might be faced with a difficult decision. *Cf. Southern Natural Gas Company,* Docket No. G–19632, 25 FPC 925 (1961)." (Transco's Initial Br., pp. 15–16)

In that case Southern sought a certificate of public convenience and necessity authorizing it to commence interruptible service to two industrial customers in Savannah, Georgia, and to install additional compressor facilities for this purpose. The Commission upheld the Examiner's denial of Southern's application to serve the two industrial customers but granted its request for a certificate to construct additional compressor facilities on condition that Southern make the necessary connections with the local distributing company so that the latter might render the service required by the two industrial customers. In denying the application by the pipeline to service the two industrial customers, the Examiner referred to the distributor's rates and revenue considerations and, after finding that from the customer's point of view the economics would seem to favor supply by the distributor, stated as follows:

> The record contains no evidence that the customers would not willingly connect with and take service from [the distributor], if Southern were not certificated, and if [the distributor] felt free to, and did, offer service. (25 FPC at 933)

The Examiner's decision was adopted as the decision of the Commission with the observation that neither the Examiner nor the Commission was to be understood as establishing, as a matter of principle, that in all cases an industrial load should be served by the distributor rather than the interstate pipeline. The Commission stated that it would "continue to consider each case on the merits as it arises and make the determinations which are commensurate with the facts and law applicable thereto." (25 FPC at 927)

New Jersey Natural contends that the fact the customers in the *Southern* case, *supra*, were willing to buy the gas from the distributing company, and that here Texaco is not so willing, is no distinction. The important point, according to New Jersey Natural, is the impact on the distributing company. This flies in the face of reality. Obviously, an industrial company will not willingly buy gas from a distributing company if the gas is not reasonably priced. Furthermore, under the findings herein, an industrial company would have to show by substantial evidence, not by "blandly" making a statement as feared by New Jersey Natural, that the gas is not reasonably priced.

In this case the economics favor the use by Texaco of its own gas. The record shows that Public Service is unable to sell natural gas to Texaco at a price which is economical enough to justify it using gas purchased from Public Service, rather than fuel oil, as a refinery fuel. Texaco established that Public Service did not offer it a reasonable price at any time during the negotiations from 1951 to 1962, and that the present tariffs contain the same unreasonable prices. This evidence was sufficient to shift the burden of going forward with the evidence to Public Service. It attempted to meet this burden (1) by proving that from the standpoint of gas supply and other considerations it was ready, willing, and able to render the proposed service,[30] and (2) by contending that if it were provided specific information concerning the use of the volumes referred to herein, it might be able to offer gas service at prices which might be "attractive" to Texaco (Tr. 779). There is no support in the record for the second point. First, it is not clear from this record whether or not Public Service could lawfully file a special tariff for the Texaco service only. Secondly, this record shows that even if Public Service were permitted by the Board of Public Utility Commissioners to sell the gas at cost, the price to Texaco would not be economical enough to justify a switch from the use of fuel oil to natural gas. As a result, this case does not present the broad policy issue posed by Public Service. The history of the parties' negotiations, and the related economics, will now be set forth.

---

[30] The record shows that Transco has the necessary volumes available for sale to Public Service for it to render the service to Texaco.

History of Negotiations Between Texaco and Public Service

In April 1951, Public Service and Texaco representatives met at the Eagle Point refinery to explore the possible use by Texaco of natural gas during the off-peak period of April through October. No specific proposal was made. Texaco stated that based on 1950 figures the use of natural gas might range from a low of about 600 Mcf per day in June to about 4,500 Mcf per day in September. Texaco indicated that a gas price "to be attractive should be lower [by five cents per barrel] than the equivalent of [New York] harbor barge prices then quoted by the Texaco representatives as $2.30 per barrel of Bunker-C oil." (Tr. 779, 874) No agreement was reached. Negotiations were terminated. Public Service stated that it would be glad to hear of any other "thoughts" that Texaco had on possible usage of natural gas at the refinery (Tr. 779).

In early February 1955, Texaco inquired of Public Service as to the possibility of supplying firm service in the amount of about 7,000 Mcf per day of natural gas throughout the year. At this time the standard price of Bunker-C oil, f.o.b. New York harbor, was $2.35 per barrel. Public Service's witness stated this price for the record using as his source the "*U.S. Journal of Commerce*" (Tr. 868).[31] On February 7, 1955, Public Service met with Texaco. The meeting developed the following areas of understanding:

> 1. Texaco might ask us to supply from 2,300 Mcf to 12,300 Mcf of natural gas on a maximum use day. The minimum use was estimated at 50% of the maximum daily use.
>
> 2. Natural gas, if available, would be most useful to Texaco at a pressure of 80 pounds per square inch.
>
> 3. Texaco's request, if made, would be for gas on a firm basis (Tr. 780).

Public Service offered to provide firm gas service to Texaco at a price of approximately 94 cents per Mcf on the basis of 1,040 Btu's per cubic foot of gas. The price per liquid barrel equivalent of fuel oil would be approximately $5.78 (Tr. 838). No agreement was reached.

In March of 1961, Texaco requested Transco to provide transportation service for it from its gas reserves in the Gulf Coast Area to the Eagle Point refinery. Transco advised Texaco that under its policy it would first notify Public Service because the latter was the natural-gas distributor in whose franchise territory the Eagle point refinery was located.[32] Such notice was given in April of 1961. Public Service then advised Transco that its representatives would discuss with Texaco the possibility of Public Service furnishing a supply of gas for Texaco's refinery.

In April of 1961, Public Service discussed with Texaco the possibility of furnishing natural gas to the Eagle Point refinery at a pressure of 60 pounds per square inch. Texaco indicated that firm gas would probably not interest them because the price of approximately 94 cents per Mcf, the same as in 1951, was considered to be too high for the use which Texaco had in mind at that time. Texaco, however, indicated its probable requirement on an interruptible basis might be as follows:

---

[31] It is obvious that by "*U.S. Journal of Commerce*" the witness meant the *Journal of Commerce and Commercial* circulated daily in New York City. No objection was made to the witness' use of this source. The Examiner takes official notice that in the same publication for January 28, 1964, the date that Public Service's sales witness testified, the price of Bunker-C oil f.o.b. New York harbor was $2.35 per barrel, assuming no discount. At the present time (April 30, 1964) the similar price is also $2.35 per barrel.

[32] Public Service's commercial annd industrial sales manager did not recall any instances where Transco has attempted to serve an *existing* industrial customer of Public Service (Tr. 836).

Maximum hourly, 381 Mcf
Maximum daily, 9,143 Mcf
Mcf per month, 164,571 Mcf based on 60% load factor.

In May 1961, Public Service met with Texaco in an effort to agree upon the sale of gas to Texaco under Public Service's ISG (Interruptible Rate Schedule). At that time the price of interruptible gas was 4.5 cents per therm. The Mcf equivalent is about 47.3 cents per Mcf at 1,048 Btu. The equivalent price per standard barrel of liquid fuel oil would be about $2.84 (Tr. 842).

In June 1961, Texaco wrote to Public Service stating that the fuel situation had been reviewed and it had been found uneconomical for Texaco to consider the purchase of interruptible gas from Public Service at that time. In January 1962, Public Service called at the Texaco plant and discussed the possibility of Texaco's use of interruptible gas. About February 1962, Texaco advised Public Service that it was not interested.[33]

At some time subsequent to April 1961, Texaco informed Transco that Public Service had offered to furnish an interruptible service at a price of 4.5 cents per therm but that such offer was not accepted because Texaco found it to be uneconomical and had a company policy of utilizing its own products whenever feasible. Transco then resumed its negotiations with Texaco which led to the agreement between Transco and Texaco which is the subject of this proceeding.

Evidence was introduced which established that the foregoing prices for firm and interruptible service are approximately the same now as they were in 1961.[34] The Examiner finds that at this point Transco had established a *prima facie* case showing that Public Service could not offer Texaco an "attractive" price (Tr. 779). Accordingly, the burden of going forward with proof that it could offer an "attractive" price to Texaco shifted to Public Service.

In an effort to excuse its failure to meet this burden Public Service contends, in effect, (1) that its tariffs do not provide the only prices at which it can, and is willing, to negotiate with Texaco since it could file a special contract for only the Texaco service with the Board of Public Utility Commissioners for the State of New Jersey; (2) that if it had been permitted to initiate a review of its rate structures in the light of the problems existing at the Eagle Point refinery, and the need for both the firm and interruptible gas referred to herein, it might have been able to offer Texaco an attractice price and thereby meet its burden of going forward with the evidence; and (3) that it was unable to do so because Texaco neither requested it to consider supplying all the aforesaid volumes, nor supplied it with sufficient and meaningful data, either prior to or during this proceeding upon which it could initiate a rate review.

---

[33] The foregoing shows that at no time during their negotiations did Texaco request Public Service to consider supplying it with 8,000 Mcf per day of firm service *and at the same time* an average of 9,000 Mcf per day of interruptible service. The largest supply discussed for any one sale was 9,143 Mcf per day of interruptible gas. As subsequently shown, Public Service contends that it could design attractive rates for Texaco based upon an average sale of 17,000 Mcf per day.

[34] Exhibits 9 and 10 are Public Service's natural-gas tariffs which became effective on February 1, 1961, and October 30, 1963, respectively, insofar as "Large Volume" and "Interruptible" services are concerned. The rate found in the present interruptible tariff amounts to the same 47.3 cents per Mcf which Texaco rejected in 1961. The present tariff for large volume firm service has the same block charges per therm as does the similar tariff which was in effect in April 1961, and which amounted to about 94 cents per Mcf.

The Special Contract

Public Service presently has no special contracts or rate schedules which are operative solely between Public Service and a particular individual customer and, insofar as its industrial and commercial sales system manager knows, it has never had such a special contract. In order to meet the particular needs of some customers, and to sell gas competitively, it has reviewed its rate structure and modified its rates to encourage gas usage for air conditioning and to provide economical heating and air conditioning service for large apartment houses and office buildings, among others. It has also established general rate schedules to meet customer needs for interruptible and off-peak use of gas. Its rate reviews are made whenever there are special or unusual problems presented in an industry.

Public Service's industrial and commercial system sales manager considers Texaco to be a potential customer because to him, "as a salesman, any large industrial enterprise is a potential customer for more of our service." (Tr. 854) It was his opinion, however, that Public Service needed more data before it could undertake a meaningful review of its rates in an effort to offer Texaco an "attractive" price. It was also his opinion that Public Service could not lawfully establish a special contract rate for service of natural gas to Texaco unless "it were in the form of a rate available to other customers in the same circumstances and approved by the Board [of Public Utility Commissioners]." (Tr. 876).

Public Service's counsel, however, disagreed and stated that under the applicable law Public Service could file a special contract with the Board for one customer. Counsel for Elizabethtown Consolidated stated that the Board by special letter had required all gas companies to file their interruptible gas contracts and that Elizabethtown Consolidated had filed 13 or 14 such contracts. The Examiner indicated that the matter was not free from doubt and requested the concerned parties to cover the subject in briefs. The briefs contained no citations of authority on this point. Furthermore, the Board of Public Utility Commissioners, which would logically be in a position to know whether or not it could lawfully consider a special contract between Public Service and Texaco for gas service, did not discuss the matter at all. The record does not permit of a finding that Public Service can lawfully file a special contract containing firm and interruptible reduced rates for Texaco only.

Even if it were assumed that the Board of Public Utility Commissioners could, and would, approve a class rate which would permit Public Service to sell gas to Texaco at cost, this record shows that the price would still be within the area rejected by Texaco's management as unattractive.[25]

Texaco has shown by competent evidence that it needs the 8,000 Mcf per day of firm service in order to accrue many of the economic benefits envisioned by a switch to natural gas. There is no support whatsoever in the record for the implication at pages 27 and 28 of Public Service's brief that Texaco would be just as well off by using interruptible service for all or part of the firm 8,000 Mcf per day. No further review of Texaco's refinery operation directed to allocating all or part of the 8,000 Mcf to interruptible service is warranted on this record. The record also shows that Public Service would have to increase its estimated annual firm contract purchases by nearly the full 8,000 Mcf per day in order to supply the Texaco firm service. Under Transco's contract-demand rate in the 3rd Zone (CD–3) the average charge per Mcf at 100 percent load factor is 38.7 cents. At cost, therefore, Public Service would have to sell the gas to Texaco at 38.7 cents per Mcf, plus 14.0625 percent for New Jersey gross receipts and franchise taxes (as subsequently shown), for a total of 44.1 cents per Mcf. At the conversion factor of 6.4 the equivalent barrel of Bunker-C fuel oil would be $2.82.

---

[25] The Commission will not lightly disturb a management decision made, as here, after a study of all available forms and sources of energy and based on the best judgment of its experts. *American Louisiana Pipe Line Company*, Docket No. G–2306, *et al.*, Opinion No. 402, decided September 17, 1963, 30 FPC 698. This is especially so where, as in this case, the record shows that substantial benefits to all of Transco's customers will result from approval of the application.

The CD–3 commodity component is 25.7 cents per Mcf. Assuming, without deciding, that Public Service would sell all the interruptible gas at 25.7 cents, the total of the commodity cost plus applicable gross receipts and franchise taxes would be 29.4 cents.[36] At the conversion factor of 6.4, the price per equivalent barrel of Bunker-C fuel oil would be $1.87. The weighted average of 44.1 cents per Mcf for firm gas and 29.4 cents for interruptible gas is 36.32 cents. Using the conversion factor of 6.4 cents, the price of an equivalent amount of fuel oil is $2.32 per barrel. As previously shown, the price at this time for a barrel of Bunker-C fuel oil f.o.b. New York harbor is $2.35 per barrel. Even a sale at cost plus taxes, therefore, would not be within the range of prices considered by Texaco to be "attractive."[37] Furthermore, and most important, it is extremely doubtful that Public Service would be permitted to sell at cost plus taxes. To do so, it would not only have to forego fixed costs and profit, but also the recovery of the cost needed to construct two to four miles of transmission line necessary in order to render such service.

The Examiner finds that as a result of the basic economics shown in this record, Public Service could not in the foreseeable future offer an "attractive" rate to Texaco; that the fact Texaco did not request Public Service to consider supplying all the volumes requested herein, or provide it with complete refinery data concerning the use of such volumes, is immaterial; and that Public Service has not met its burden of going forward with evidence sufficient to meet the *prima facie* case established by Transco. The remaining public interest considerations urged as requiring denial of the application are the establishment of a detrimental precedent, and competition bottomed on tax avoidance.

Detrimental Precedent

Public Service argues that if this application were approved, a precedent would be established which "would cause other large energy-using industries to take steps to acquire blocks of natural gas and call upon pipeline companies to transport the gas." (Br., p. 20) in support it cites the following language by the Commission in the *X–20* case:

> Certainly, if we were to grant this request we would soon be confronted with many requests of the same character; and granting the X–20 proposal we would have no fair or rational basis for denying similar such requests. Likewise, the authorization of this and like proposals would preempt for this usage capacity which would otherwise be available to meet more urgent and widely beneficial public needs, * * *. (21 FPC 138, 141)

Public Service contends that such preemption of the distributors' market would (1) decrease its energy sales to existing customers, (2) reduce the potential sales market needed for future company growth, and (3) deprive political divisions within New Jersey of its revenues derived from the sale of gas to industry. Public Service's fear that approval of the instant application would result in a loss of existing customers and future markets is based upon the obvious point that customers will enter into transportation agreements if they can save money by doing so.

---

[36] 14.025×25.7=3.7 cents. The total cost and taxes=29.4 cents.

[37] Five cents lower than the equivalent of New York harbor barge prices for Bunker-C oil (Tr. 779,874).

Public Service's concern, however, is caused by a failure to properly distinguish between an industrial company that is daily engaged in the production of its own gas, on the one hand, and service to industrial companies who through direct purchases in the field obtain sufficient natural gas of their own, on the other hand. The decision herein is limited to approval of the situation where there has been no direct producer sale in the field to any industrial customer. The precedent argument advanced by Public Service must be considered within the narrow confines of such approval. Furthermore, as stated by the Commission in the *Southern* case, *supra*, each case is to be considered "on the merits as it arises. . . ." The Examiner finds that no issue is presented in this proceeding by Public Service's allegation that chemical companies and other industrial firms on the eastern seaboard will go into the field and make direct purchases of gas reserves for transportation if the Texaco transportation service is certificated. Policy issues which may be presented by such arrangments must await adjudication in subsequent proceedings in which direct producer sales are a part of the applicant's proposal.

Transco now has two contracts with refinery companies for transportation of natural gas—Sun and Texaco. There have been about six requests from other oil refinery or industrial companies for transportation service. Transco's vice-president in charge of marketing, who was presented as a policy witness, was asked whether Transco was willing to offer to others a transportation service comparable to the Texaco service, if through discovery, purchase, assignment, or succession they obtain sufficient natural gas of their own in the field. His unchallenged answer was as follows:

> That question does not permit just a simple "yes" or "no" answer. . . . There is a lot of related matters that would ultimately make that decision. As you know, we have always attempted to work out with our distribution customers service of the nature to which you are generally referring, and particularly where there is an industrial company involved that is not daily engaged in the producing of gas from which Transcontinental is a purchaser.
>
> Now, you are going afield of that and introducing something that we have never made any effort to do nor would we wish to do that. If we were pressed by somebody in that position as a matter of right that we had to transport it for them, I think we would have to have some legal advice before we tell them we couldn't do it. (Tr. 347)

In answer to a question concerning Transco's policy in the event any other refinery company should request transportation service, he stated "it would depend I think on the practicalities of it, did they own gas adjacent or somewhere near our pipeline, a supplier of gas to us, was their refinery located on our pipeline or not." (Tr. 353)

On this record, therefore, the distributor's potential customers are limited to industrial customers who have their own producing fields near Transco's line, or the line of any other interstate pipeline serving the eastern seaboard in which the interveners herein are located.[38] The evidence shows that there are no such industrial customers near any interstate pipeline serving the interveners in opposition herein.

---

[38] As in Texaco's case, however, whether such an industrial customer is truly a potential industrial customer depends upon whether the distributor can offer an "attractive" price to the industrial.

There are numerous chemical companies on the east coast. Many of them have gas producing subsidiaries. At least one chemical company not having gas reserves has mentioned to a distributor the possibility that it might acquire gas reserves and arrange for transportation instead of buying gas from the distributor. The evidence of record shows that no chemical company with gas producing subsidiaries has uncommitted supplies of gas reserves near one of the interstate pipelines serving the eastern seaboard and is presently considering transporting such reserves to their plants in the east. Merck and Company is the only chemical company shown to be within the service area of any intervener in opposition.

In 1956 Transco advised Elizabethtown Consolidated that Merck and Company had approached Transco in regard to securing the transportation of natural gas on a firm basis. Merck was to buy the natural gas in the field. Elizabethtown Consolidated then had conferences with Merck which ended without agreement. Subsequently, in 1956 Texas Eastern Transmission Corporation approached Elizabethtown Consolidated and advised it that they wanted to enter into a joint venture with Merck to build a menthol plant on Merck's property and supply gas to it. Elizabethtown Consolidated objected to the project. It was not completed.

This record shows that there are 14 major refineries on the east coast. Three of them were shown to be in Elizabethtown Consolidated's service area. None was shown to be in the service area of any other intervener in opposition. The three are as follows: the Esso Bayway Refinery of Humble Oil & Refining Company; the Hess Oil and Chemical Corporation, and the California Oil Company. The pipelines of Transco and Texas Eastern Transmission Corporation are either adjacent to or go through these refinery properties. Elizabethtown Consolidated's witness did not know whether any large industry in its service area, including the aforesaid three refineries, had uncommitted reserves of gas in the field near an interstate pipeline serving such eastern seaboard area.

Elizabethtown Consolidated has never sold any substantial quantities of gas to any of the three refineries. It has been negotiating with Hess Oil Company for a sale to the latter of interruptible gas for the four summer months. (During these months a lower than normal rate is quoted.) Their discussions never centered around the transportation by Hess of its own gas. Negotiations between Elizabethtown Consolidated and California Oil were begun recently. The terms considered were the sale of interruptible gas for the four summer months at 4 cents per therm (about 41.6 cents per Mcf at 1,040 Btu).

Elizabethtown Consolidated "fears" that its efforts to secure the above interruptible contracts will collapse if the instant application is approved, because the companies will then seek transportation of their gas rather than buy it from them.[39] It also "fears" loss of future business and the loss of existing unspecified customers. However, Elizabethtown Consolidated, as did Public Service, failed to make a distinction between a producing company owning uncommitted reserves near a pipeline and a company which would have to make a direct purchase in the field.

According to this record none of the producers of natural gas, other than Texaco, located in the service area of any of the interveners in opposition has uncommitted reserves near an interstate pipeline serving such service areas.

---

[39] However, it was not shown that these companies owned uncommitted gas reserves near a pipeline serving New Jersey.

The Examiner finds that on the basis of the reliably probative and substantial evidence of record the certification of Transco's proposal, limited as aforesaid, will not create a precedent which will be detrimental to the interests of the interveners in opposition herein.

Tax Avoidance

The Board of Public Utility Commissioners, Public Service, and Elizabethtown Consolidated contend that approval of the instant application would permit and encourage ruinous competition because an industrial company could save 14 cents on every dollar by purchasing gas from an interstate pipeline company. The saving arises due to the New Jersey statute which imposes a franchise and gross receipts tax on every dollar of gas sale revenue.[40] The amount is presently computed at 14.0625 percent. It is urged that the avoidance of such taxes by the proposed transportation agreement is so clearly against the public interest that, standing alone, it requires denial of the application.

Payment of the franchise and gross receipts tax exempts Public Service from paying New Jersey personal property tax (ad valorem), and corporate franchise, business, and state income taxes. It also entitles it to use public streets and highways without paying further compensation. Since Transco pays personal property and other taxes to the State of New Jersey, it and Texaco contend that the tax is not a true saving. Public Service argues that this is a distinction without a difference because Transco's tax payments are rolled into its cost of service upon which its CD-3 firm-contract rate is computed. In the Examiner's view, the competitive effects of the various taxes on Transco and Public Service cannot be determined without a detailed analysis of the whole New Jersey tax structure. The record does not permit of such an analysis and none is needed. Regardless of the effect on Transco and Public Service, the important consideration is that Texaco, and any other purchaser, would have to pay 14.0265 percent more for every dollar of gas purchased from Public Service. The Examiner finds, for the reasons discussed below, that the avoidance of the tax in this case is not inconsistent with the public interest.

In *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U.S. 591 (1944), the State of West Virginia contended that the just and reasonable rates fixed for Hope by the Commission would cost the state many thousands of dollars in taxes and that the Commission should have considered the effect of such loss on the economy of the state. In response to this argument the Supreme Court stated as follows:

> We have considered these contentions at length in view of the earnestness with which they have been urged upon us. We have searched the legislative history of the Natural Gas Act for any indication that Congress entrusted to the Commission the various considerations which West Virginia has advanced here. And our conclusion is that Congress did not. (320 U.S. at 609)

The Examiner finds that the tax avoidance argument advanced by Public Service and the Board of Public Utility Commissioners provides no basis for a denial of the certificate.

OTHER TRANSPORTATION AGREEMENTS

The transportation of natural gas by a producer through the facilities of an interstate pipeline for consumption in the producer's own refinery has been found by the Commission to be in the public interest in the following cases: *Transcontinental Gas Pipe Line Corp.*, 7 FPC 24, 13 FPC 1006, 14 FPC 333 and

---

[40] R.S. 54:30A-49 to 67, inclusive.

22 FPC 836; *Chandeleur Pipe Line Company*, Docket No. CP64-37, order of December 16, 1963, 30 FPC 1515; *Texas Gas Transmission Corporation*, Docket No. CP63-327, order of September 12, 1963, 30 FPC 689; and *Sabine Pipe Line Company*, Docket No. CP64-97, order of March 25, 1964, *supra*.

The *Chandeleur*, *Lawrenceville* and *Sabine* cases were certificated under the Commission's shortened procedure.[41] As previously shown, Public Service urges that the *Sun* case does not constitute a precedent for approval of the instant application because the facts were materially different. It similarly urges that the *Lawrenceville* case is no precedent. The *Sabine* case was approved after the interveners in opposition had filed their briefs.

The point established by these cases, irrespective of certain factual differences, is that there is no Commission policy against approval of the type of transportation proposed by Transco, if the transportation is otherwise required by the public convenience and necessity. Under the circumstances of this case, where the alternative to approval is the continued use of fuel oil by Texaco without benefiting either the customers of Public Service or Transco, it is in the public interest to approve the proposal and thereby benefit all of Transco's customers, including Public Service.[42]

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the whole record and a balance of all the circumstances, and as supported by and in accordance with the reliable, probative and substantial evidence, it is further found and concluded that:

(1) Transcontinental Gas Pipe Line Corporation (Applicant), a Delaware Corporation have its principal place of business in Houston, Texas, is a natural-gas company within the meaning of the Natural Gas Act, as heretofore found by the Commission in Docket No. G-1143 (7 FPC 139).

(2) Texaco Inc., a Delaware Corporation, is authorized to do business in the states of Texas, Louisiana, and New Jersey among others.

(3) The construction and operation of the 8-inch lateral line in Louisiana and the gathering and sales meter and regulator stations in Louisiana, Texas, and New Jersey, as proposed by Applicant and as more particularly described in its application in Docket No. CP63-222, as supplemented, will be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation of such facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The facilities referred to in paragraph (3) are adequate and appropriate to render the service which Applicant proposes, and which it is hereinafter authorized to provide.

(5) Applicant is able and willing properly to do the acts and to perform the transportation and the service proposed by it in its application in Docket No. CP63-222, as supplemented, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The construction and operation of facilities specifically referred to in paragraph (3), and the transportation in interstate commerce, as proposed by Applicant in its application, as supplemented, are required by the public convenience

---

[41] 18 CFR 1.32. Certificates issued under the shortened procedure are issued only "in the light of all the evidence" and only if the public convenience and necessity require the construction and operation of the proposed facilities. *Atlantic Seaboard Corporation*, 27 FPC 370 (1962).

[42] *Cf. American Louisiana Pipe Line Company*, Docket No. G-2306, *et al.*, Opinion No. 402, issued September 17, 1963.

and necessity, and a certificate therefor shall be issued as hereinafter ordered and conditioned.

(7) The construction and operation of the remaining facilities proposed by Applicant in its application, as supplemented, have been certificated in Docket No. CP64-96 and the duplicate certification of such facilities is not required by the present or future public convenience and necessity.

(8) The conditions hereinafter ordered are required by the public convenience and necessity.

ORDER

WHEREFORE, *It is Ordered*, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) The application by Transcontinental Gas Pipe Line Corporation in Docket No. CP63-222, as supplemented, is denied insofar as it requests authority to construct, install, and operate the following facilities: (1) 10.82 miles of 30-inch pipeline loop in Louisiana; (2) 11.08 miles of pipeline loop in Pennsylvania; and (3) an additional 3,400 H.P. compressor unit at existing Station No. 80, all as more particularly described in its application, as supplemented.

(B) A certificate of public convenience and necessity be, and hereby is, issued in Docket No. CP63-222 to Transcontinental Gas Pipe Line Corporation to construct and operate the 8 inch lateral line in Louisiana and the gathering and sales meter and regulator stations in Louisiana, Texas, and New Jersey, and to transport natural gas in interstate commerce, all as hereinbefore set forth and as more fully described in the application, as supplemented, and the exhibits and record herein, for the transportation of natural gas as therein set forth, upon conditions hereinafter ordered.

(C) The certificate issued by Paragraph (B) above is granted on the express conditions (1) that the firm and interruptible transportation services authorized herein shall be subject to curtailment and interruption if required to meet the existing or future contracted maximum daily delivery obligations of Transcontinental Gas Pipe Line Corporation for firm resale service to its customers, including, but not limited to, its General Storage Service Rate Schedule (GSS) customers; (2) that excess deliveries under its Rate Schedule GSS shall be given priority over the interruptible transportation service authorized herein; and (3) that the conditions in this Paragraph (C) are to be included as a part of its Rate Schedule X-37 when such schedule is filed with the Commission.

(D) The certificate issued herein, as conditioned, is not transferable and shall be effective only so long as Applicant continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(E) The certificate issued herein shall be deemed accepted and in full force and effect unless refused in writing, and under oath by Applicant within 30 days of the effective date of the final order herein.

(F) The facilities authorized herein shall be constructed and placed in actual operation within six months from the effective date of the final order herein.

(G) The grant of the certificate issued herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Commission's Regulations thereunder requiring the filing of rate schedules for the service hereunder (18 CFR 154), and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicant.

(H) The general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of the Commission's

Regulations under the Natural Gas Act (18 CFR 157.20) shall attach to the certificate issued to Transcontinental Gas Pipe Line Corporation and to the exercise of the rights granted thereunder.

DYER JUSTICE TAYLOR,
Presiding Examiner

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WISCONSIN POWER & LIGHT COMPANY, PROJECT NO. 2347; SOUTH BELOIT WATER, GAS AND ELECTRIC COMPANY, PROJECT NO. 2373

ORDER DENYING APPLICATIONS FOR REHEARING

(Issued February 17, 1965)

On November 6, 1964, the Wisconsin Power & Light Company and the South Beloit Water, Gas and Electric Company (Applicants) filed two identical applications under Section 313(a) of the Federal Power Act for rehearing on the Commission's license orders issued October 7, 1964, 32 FPC 926, 928, with respect to Wisconsin's Janesville Central Plant located on the Rock River in Wisconsin, Project No. 2347, and South Beloit's Rockton Plant located on the Rock River in Illinois, Project No. 2373. By order issued December 1, 1964, rehearing was granted for the purpose of affording opportunity for further consideration. Applicants allege three errors on the part of the Commission in issuing its orders of October 7, 1964.

1. The first error alleged by Applicants is that paragraph (B)(i) of the orders issuing license[1] fails to describe sufficiently limits of the project boundaries because the project maps, Exhibit K, submitted with the applications in accordance with Section 131.6 of the Regulations contained only the general location of their projects without specifying the project boundaries. It is Applicants' view that the indefiniteness as to the project boundaries creates a cloud upon the title to lands adjacent to but not a part of the projects because of the conditions contained in Form L-9 (July 1, 1964), 32 FPC 577, and various provisions with respect to recapture, relicensing, termination and revocation.

This alleged error is substantially the same as the error alleged by Wisconsin Power & Light in its application for rehearing on Commission's order issued August 10, 1964, 32 FPC 575, with respect to its Project No. 2346. We reiterate here what we said in response to this motion in our order issued October 8, 1964, 32 FPC 959, denying application for rehearing in Project No. 2346:

> As a practical matter, Applicant cannot be aggrieved by any possible vagueness in the definition of the project boundaries because the Commission's order issuing a license for the project makes clear in finding No. 7 and ordering paragraph (D) that the Commission has waived the provisions of Section 14, except insofar as the power of condemnation is reserved, as authorized in Section 10(i) of the Power Act with respect to projects of not more than 2,000 horsepower installed capacity. Consequently, the project may be taken over by the United States only with the consent of the licensee or upon condemnation; and in either event the lands and project works to be taken over would be subject to definition at that time and would not

---

[1] Paragraph (B)(i) of the aforesaid orders provides that the projects shall include: (i) all lands constituting the project area and enclosed by the project boundary of the limits of which are otherwise defined.

> depend upon any present definition of the project boundaries. Due to the waiver of Section 14 and other sections of the Act, the Commission followed its usual procedure in this case by neither approving [nor] disapproving the Applicant's map, Exhibit K. * * *

Those reasons are equally applicable to this first error alleged by Applicants here, since here as in Project No. 2346 it appears that the lands with which applicants are concerned, are fast lands; *i.e.*, lands above the high water mark along the bed of the stream on which the projects are located. See *United States* v. *Willow River Power Co.*, 324 U.S. 499, 508.

Applicants' revised Exhibit K annexed to their applications for rehearing will be filed in the Commission's official files on these projects. If it should be subsequently determined that Sections 14 and 15 of the Act should not be waived (see point 2, *infra*) we shall, of course, have to approve an appropriate Exhibit K, among other exhibits which would then be required.

2. Applicants' second alleged error arises from the waiver of Section 15 of the Federal Power Act and from the attachment of Article 10 of Form L-9 to the order as part of the conditions on which the licenses were granted. Applicants contend that the waiver of this Section deprives them of certain rights granted by that Section which the Commission is not authorized to waive by Section 10(i) of the Act. It is Applicants' view that Section 10(i) was intended to be used to relieve licensees of projects of less than 2000 horsepower installed capacity of the burdensome provisions only of the Federal Power Act. Applicants' notes that the waiver of section 15 of the Act would waive the right of the Licensee at the expiration of the license term to have an annual license issued to it on a year to year basis under the terms and conditions of the original license unless or until the project is recaptured by the United States or the Commission issues a new license to the original licensee or to a new licensee. Applicants do not complain of the proposed waiver of Section 14 of the Act.

The difficulty with this proposition is that it will leave the United States without adequate protection at the end of the license period. For, if Section 14 of the act is waived but not Section 15, the Licensee at the end of its license term will have an absolute right to continue to operate its project either under a new license or under an annual license subject only to the Commission licensing the project works to another party (upon that Party's paying to the Licensee the net investment plus severance damages as provided for in Section 14), or to have the United States condemn the project works while still under license. We think it clear that the interests of the United States in waterways subject to its jurisdiction cannot be protected under such a procedure. Either the United States must have the right to recapture project works pursuant to the standards of Section 14 at the end of a license term or it must have the right (as it would if both Sections 14 and 15 are waived) of taking appropriate action to clear the stream if at the end of a licensed term the continued presence of a small project thereon is no longer compatible with the public interest. *Cf. United States* v. *Chandler Dunbar*, 229 U.S. 53, 69.

Congress has recognized, in giving us authority to waive Sections 14 and 15 of the Act, among others, that in the case of small hydroelectric projects the interests of the United States may be more in maintaining control over waters subject to the jurisdiction of the United States than in eventually taking over the particular project works at less than a condemnation price. We have, in turn, in the exercise of our discretion, normally offered applicants for minor licenses, a license waiving Sections 14 and 15 of the Act in lieu of one which does not. If an applicant for a minor license is unwilling to risk the possibility that at the end of its license terms (plus such additional time as might be entitled to pursuant to Section 9(b) of the Administrative Procedure Act), the Commission might find that any continued operation of facilities would be inconsistent with the public interest, it need not do so. If, however, it is unwilling to accept a license which waives Article 15 as well as Article 14, its alternative is to apply for and accept a license which is subject to *both* Sections 14 and 15, together with the other provisions of the Act necessary to the effectuation thereof which we would otherwise waive for a minor license.[2]

Article 10 of Form L–9[3] to which Applicants also object is merely a restatement of the provisions of the first sentence of Section 23(b) of the Act as applied to Applicants' projects. That section provides that it would be unlawful to operate or maintain these projects except under and in accordance with an existing license granted pursuant to the Federal Power Act. The article to which Applicants object, if anything, gives them greater rights since it is written in language broad enough to encompass any rights Applicants might have under Section 9(b) of the Administrative Procedure Act or any other applicable provision of law.

3. Applicants allege that the third error arises from the inclusion of Articles 8 and 9 in Form L–9 which has been attached to the orders issuing licenses. The Applicants maintain that these license conditions provide a method of termination of the licenses in case of an abandonment more burdensome than the statutes since under the statute the United States would have the affirmative burden of the equity action under Section 26 of the Federal Power Act to deprive a licensee of its property and license.

Section 26, which has not been waived provides in part:

> * * * that the Attorney General may on request of the Commission or the Secretary of the Army, institute proceedings in equity in the District Court of the United States in which the project * * * is situated for the purpose of revoking for violation of its terms any permit or license issued [under the Federal Power Act].

The language of this section clearly indicates that it provides a discretionary remedy and does not preclude the exercise by the Commission of other powers granted to it by the Federal Power Act as amended in 1935 to insure compliance with the provisions of that Act and its own rules and regulations. Articles 8 and 9 are standard license conditions which the Commission has consistently attached for several years to licenses for minor projects. Article 8 permits the Commission on 90 days public notice to terminate the license if the licensee causes essential project property to become unfit for use, or discontinues good faith operation for three years, or refuses to comply with the terms of the license and lawful Commission orders. Article 9 requires the licensee to remove all buildings, equipment and power lines upon the abandonment of the project.[4] Section 6 of the Federal Power Act permits the issuance of licenses for a period not to exceed 50 years upon such conditions, if any, as the Commission shall prescribe in conformity with the Act, and Section 10(g) authorizes the issuance of licenses upon conditions not inconsistent with the provisions of the Federal Power Act. The conditioning of a license for a project of not more than 2,000 horsepower installed capacity, upon the Licensee's willingness and ability to maintain its project in working order, and to comply with the terms of its license and the lawful orders of the Commission, in our judgment, is not an unreasonable exercise of the Commission's authority in issuing licenses for these projects subject to Section 10(i) of the Act. Any action taken by the Commission under these license conditions would be subject to rehearing and court review as provided in Section 313 of the Act.

---

[2] In granting minor licenses in which Sections 14 and 15 are waived, we have also normally waived Sections 4(b) except the second sentence thereof, 10(c) insofar as it relates to depreciation reserves, and 10(d). All of these provisions are essential if we are to be able effectively to determine the price at which a project can be recaptured by the United States under Section 14 or taken over by a new licensee under Section 15.

[3] *Article 10.* The right of the Licensee and of its transferees and successors to use or occupy navigable waters of the United States under the license for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the existing laws and regulations.

[4] Sections 6.2 and 6.4 of the Commission's Regulations (18 CFR 6.2 and 6.4) in effect as early as 1938, provide for termination of licenses subject to Section 10(i) of the Act by implied surrender and require appropriate disposition of project works as a condition of surrender.

The Commission finds:

The assignments of error or grounds for rehearing set forth in the applications for rehearing filed by the Applicants on November 6, 1964, on the Commission's orders issued October 7, 1964, present no facts or principles of law which were not considered by the Commission when it issued the aforesaid orders or which having now been considered warrant change or modification of the said orders.

The Commission orders:

(A) Wisconsin Power & Light Company's and South Beloit Water, Gas & Electric Company's applications filed on November 6, 1964, for rehearing of the Commission's orders issued October 7, 1964, in Project No. 2347 and Project No. 2373 are denied.

(B) This order shall become final within 60 days from the date of issuance, provided that it shall be stayed with respect to each of the applications which is supplemented within that time pursuant to Section 4.50 of the Commission's Rules and Regulations under the Federal Power Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BANGOR HYDRO-ELECTRIC COMPANY, PROJECT NO. 2403

ORDER ISSUING LICENSE (MAJOR)

(Issued February 18, 1965)*

Application was filed on September 3, 1963 by Bangor Hydro-Electric Company (Applicant) of Bangor, Maine, for a license under Section 4(e) of the Federal Power Act (Act) for constructed major Project No. 2403, known as the Veazie Project, located on the Penobscot River, in Penobscot County, Maine.

According to the application, the initial construction of the project was about 1886 consisting of a wood crib dam, 15 turbines and 3 generators. In 1912–13, the present Ambersen type concrete dam was constructed to replace the wood crib dam. Between 1914 and 1920 all of the turbines and generators were replaced. In 1925, the project was acquired by Applicant. In 1933, Unit No. 1 was replaced with a new turbine and generator. The powerhouse with 15 units installed therein is known as Powerhouse A. Powerhouse B was constructed in 1938–39 with two units placed in operation in March, 1939. The total generating capacity of the project is 8,400 kilowatts. No major changes or additions have been made to the project since 1939.

---

*Rehearing denied by order issued July 12, 1965, 34 FPC 23. Affirmed, *Bangor Hydro-Electric Co.* v. *F.P.C.*, 355 F. 2d 13 (CA1–1966).

The Penobscot River and its East and West Branch have been used extensively in boating operations for the transportation of persons and property between various points on such streams. Extensive logging operations have been conducted between the mouth of the Penobscot River at Penobscot Bay and the international boundary on the West Branch and Chamberlain Lake on the East Branch.

The Secretary of the Army and the Chief of Engineers have approved the plans of the project structures affecting navigation pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife and recreation.

The Department of Health, Education, and Welfare has advised that the project does not constitute a source of pollution and although releases for low flow regulation may be necessary at some future date, such is not warranted at this time, and the granting of a license for the project will not create or intensify vector problems.

The Veazie Project is a small project with little potential for recreational development, and, although there is not much demand for recreation or fish and wildlife facilities at the present, current studies by the Maine Department of Inland Fisheries and Game and the Maine Atlantic Sea Run Salmon Commission indicate that future alterations of the project may need to be made for fishing and other water-orientated recreational use, as well as for anadromous fish passage.

While Applicant has filed an Exhibit R, it has not filed a recreational use plan appropriate for approval. By Article 32 herein we are requiring Applicant to cooperate with Federal, State and local agencies in the interest of recreation in connection with the use of project lands and waters by the public and to keep us advised at stated intervals with respect to the results.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of January 1, 1938 and a termination date of December 31, 1987.

The Commission finds:

(1) The project is located on a navigable waterway of the United States.

(2) Applicant is a corporation organized under the laws of the State of Maine, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 11,200 horsepower, and the amount of annual charges, based on

such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The energy generated at the project is distributed and sold by Applicant for public utility purposes.

(8) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Bangor Hydro-Electric Company (Licensee) of Bangor, Maine, under Section 4(e) of the Federal Power Act (Act) for a period effective January 1, 1938 and terminating December 31, 1987, for the continued operation and maintenance of constructed Project No. 2403, located on the Penobscot River, a navigable waterway of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2403 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2403–1) General Map—Project Area; (FPC No. 2403–2) General Map—Transmission System; and

Exhibit K: Three Sheets (FPC Nos. 2403–3, –4, and –5) Detail Map, Reservoir.

(ii) Project works consisting of: a concrete Ambersen type dam with 7-foot flashboards; a reservoir with a surface area of 350 acres at a pool elevation of 35 feet (USGS Datum); a concrete cantilever wall with 3-foot flashboards forming a forebay; concrete headgates; a gated intake section; *Powerhouse A*, containing 15 turbines with a total capacity of 7,013 horsepower connected to 15 generators with a total capacity of 5,400 kilowatts; *Powerhouse B*, containing two 2,070-horsepower turbines each connected to a 1,500-kilowatt generator; step-up transformers; a fishway; and appurtenant electrical and mechanical equipment; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 (FPC No. 2403–6) General Plan and Dam Sections; Sheet 2 (FPC No. 2403–7) Main Floor Plan; Sheet 3 (FPC No. 2403–8) Transverse Sections; Sheet 4 (FPC No. 2403–9) Longitudinal Section; and

Exhibit M: Ten typewritten pages, entitled, "General Description and Specifications of Equipment and Appurtenances" filed in the Commission on September 3, 1963.

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such propetry as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964), entitled, "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof except for Article 25 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective as of January 1, 1938:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 11,200 horsepower.

Article 31. The Commission reserves the right to determine at a later date what additional transmission facilities, if any, shall be included in this license as part of the project.

Article 32. Licensee shall cooperate with Federal, State and local agencies in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project. At the end of six (6) years from the date of issuance of this license and every sixth year thereafter, Licensee shall advise the Commission by letter of the results of cooperation with such agencies and of further recreation development at the project.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 450

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64-294; KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., COMPLAINANT v. COLORADO INTERSTATE GAS COMPANY, DEFENDANT, DOCKET NO. RP65-43

OPINION AND ORDER GRANTING CERTIFICATE AND INSTITUTING RATE INVESTIGATION

(Issued February 18, 1965)*

Syllabus

1. Commission can and will consider effect of grant of certificate for new sale upon rates charged existing customers and order seller [as certificate condition] to reduce or change its rates to such other customers, particularly where if no action were taken existing rate-payers would immediately receive less valuable service and could not secure relief until subsequent pipeline rate case. PP. 282, 283.
2. There is no reason for tying rate matters to instant certificate proceeding: such action would result in further delay in authorizing a sale which is

admittedly in the public interest, at a rate no one suggests is improper. P. 283.

3. Since pleadings and record leave unresolved substantial questions of fact concerning rate schedule [including undue discrimination] Commission considers pipeline-purchaser's allegations as formal complaint and institutes investigation. P. 283.

4. Commission *issues* certificate of public convenience and necessity under Section 7 of the Natural Gas Act and *institutes* investigation under Section 5(a) thereof.

***William R. Duff* and *Frank P. Saponaro, Jr.* for Colorado Interstate Gas Company.**

***E. A. Stansfield* for Public Service Company of Colorado, Cheyenne Light Fuel & Power Company, Colorado-Wyoming Gas Company.**

***J. Robert Wilson* and *John P. Furman* for Kansas-Nebraska Natural Gas Company, Inc.**

***Mrs. Julia B. Smith* for the Staff of the Federal Power Commission.**

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

O'CONNOR, *Commissioner:*

On November 4, 1964, the Presiding Examiner issued his initial decision granting Colorado Interstate Gas Company (Colorado Interstate) a certificate of public convenience and necessity under Section 7(c) of the Natural Gas Act (Act) authorizing it to construct 0.19 miles (800 feet) of three-inch line from its 40-mile 12-inch pipeline lateral running east and west just south of the Wyoming border, and to sell some 74,873 Mcf of natural gas (estimated annual third-year volume) from the three-inch line to the Cheyenne Light, Fuel & Power Company (Cheyenne Company), for resale in the town of Pine Bluffs, Wyoming. Colorado Interstate would make the sale under its P–1 rate schedule.

Kansas-Nebraska Natural Gas Company, Inc. (Kansas-Nebraska), a partial requirements purchaser of gas from Colorado Interstate, filed exceptions on December 4, 1964, objecting to the issuance of such certificate to Colorado Interstate. Kansas-Nebraska contends that to permit the sale from Colorado Interstate's 12-inch line under its P–1 rate schedule would result in undue discrimination against Kansas-Nebraska because Kansas-Nebraska must purchase gas from the same 12-inch line under Colorado Interstate's allegedly less favorable P–2 rate schedule. Kansas-Nebraska contends that the Examiner erroneously refused to deal with the merits of this issue. By way of relief, Kansas-Nebraska requests that the certificate be denied, or else be conditioned to require the filing of a revised rate applicable to its purchases based upon a 53 percent minimum take-or-pay requirement, instead of the present 75 percent requirement of the P–2 rate.

Kansas-Nebraska also contends that the Examiner erred in not dealing with its claim that the above alleged discrimination would violate Section 2(a) of the Clayton Act, as amended by the Robinson-Patman Act (15 U.S.C. 13(a)), and complains of the exclusion of its testimony on the alleged discrimination.

Replies to Kansas-Nebraska's exceptions were filed by Staff on December 23, 1964, by Colorado Interstate on December 24, 1964, and jointly by the Cheyenne Company, the Public Service Company of Colorado, and Colorado-Wyoming Gas Company on December 24, 1964. All contend that the Examiner's decision is correct and urge its adoption.

Kansas-Nebraska is undoubtedly correct in its assertion that there are circumstances where we can and will consider the effect of a grant of a certificate

for a new sale upon the rates charged to existing customers, and order the seller to reduce or change its rates to such other customers as a condition to the grant of the certificate. Thus, in *Northern Natural Gas Company*[1] we conditioned the grant of a certificate for a non-jurisdictional sale of gas to an affiliated processing plant upon the applicant's reducing the charges to its resale customers to reflect the loss from the Btu content of the gas stream resulting from grant of the certificate. As we stated in the similar *Panhandle Eastern Pipe Line Company* case,[2] "where the immediate effect of Commission action certificating a new sale may be to harm existing jurisdictional customers" there may be justification for "prompt remedial action". In both of these cases, however, if we had not taken action in the certificate case the other ratepayers would have immediately received less valuable service and could not have secured relief therefrom until a subsequent pipeline rate case.

There is no such immediate harmful effect here. Kansas-Nebraska's principal contention is that, in the light of the proposed sale to Cheyenne Company, the provision in the P-2 Schedule applicable to it, incorporating a 75-percent take-or-pay obligation, is no longer appropriate. This may or may not be correct, but Kansas-Nebraska does not contend that the sale to Cheyenne would in itself injure it or worsen its take-or-pay situation, and does not even contend that its present rates of take make the 75-percent obligation applicable. Significantly, Kansas-Nebraska does not contend that the public interest would not be served by the proposed sale. In these circumstances, we conclude that there is no reason in the present case for tying the rate matters to the certificate proceeding, an action which would only result in further delay in authorizing a sale which is admittedly in the public interest to be made at a rate which no one suggests is improper.

However, the pleadings and record in this case leave unresolved substantial questions of fact concerning the P-2 rate schedule; whether, among other things, Kansas-Nebraska is subject to undue discrimination and, if so, the tariff provisions, rules and regulations the Commission should prescribe, pursuant to the provisions of the Act, for service to Kansas-Nebraska by Colorado Interstate. Simultaneously, therefore, with the granting of a certificate to Colorado Interstate, we shall, by considering Kansas-Nebraska's allegations as a formal complaint, institute an investigation into the propriety of Colorado Interstate's P-2 rate schedule.

It appears that a public hearing should be held in order to afford all interested parties an opportunity to present evidence concerning the issues herein; that Kansas-Nebraska has the obligation of adducing evidentiary support of its allegations and of going forward in the presentation of its case-in-chief; that the issues involved herein should be determined with the greatest possible expedition in conformity with Section 2.59(h) of the Commission's Rules of Practice and Procedure and, to that end, each party should have the opportunity to understand and evaluate the position of the other parties. All matters which can be fully resolved without formal trial should be eliminated from hearing and settled by stipulation.

Since we do not dispose of the allegations of discriminatory treatment, we need not consider at the present time Kansas-Nebraska's further allegations of a violation of Section 2(a) of the Clayton Act. In the light of our conclusion herein we need not consider the propriety of the Examiner's exclusion of some of Kansas-Nebraska's evidence.

---

[1] 28 FPC 1155 (1962).

[2] 30 FPC 1260 (1963), at 1266.

The Commission finds:

(1) The construction and operation of the proposed facilities and the proposed delivery of natural gas by applicant are required by the public convenience and necessity and a certificate therefor should be issued.

(2) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that we, upon our own motion, institute an investigation pursuant to Section 5(a) of the Natural Gas Act to determine the propriety of the 75-percent take-or-pay provision applicable to sales to Kansas-Nebraska from the 12-inch line involved herein. The issues should be expedited in accordance with the procedures set forth below.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing applicant to construct and operate the proposed facilities as hereinbefore described.

(B) Except to the extent indicated above, the exceptions filed to the Presiding Examiner's decision by Kansas-Nebraska Natural Gas Company, Inc., on December 4, 1964, are hereby denied.

(C) Pursuant to authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Natural Gas Act, particularly Sections 5, 15, and 16 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a public hearing will be held concerning the matters involved to determine whether or not the retention of the 75-percent take-or-pay provision applicable to sales to Kansas-Nebraska from Colorado Interstate's 12-inch line involved herein is just and reasonable within the meaning of the Act, and not unduly discriminatory.

(D) Kansas-Nebraska shall serve the prepared testimony and exhibits constituting its case-in-chief upon all parties on or before March 15, 1965.

(E) The respondent, Colorado Interstate, shall serve the prepared testimony and exhibits constituting its case-in-chief upon all parties on or before April 12, 1965.

(F) The Commission Staff and all other parties to this proceeding proposing to present evidence herein, shall serve their prepared testimony and exhibits on all parties on or before May 10, 1965.

(G) The Presiding Examiner shall set the date for the service of Kansas-Nebraska's rebuttal case and, if determined necessary and appropriate without unduly delaying the proceeding, he may provide for filing of cross-rebuttal between the parties on a date prior to the date set for service of Staff's rebuttal.

(H) Presiding Examiner Allen C. Lande or any other officer or officers of the Commission designated by the Chief Examiner for that purpose (see delegation of authority, 27 F.R. 4276, etc.), shall preside at the prehearing conference and at the hearing in this matter, pursuant to the Commission's Rules of Practice and Procedure, and as further provided by this order, shall set the date of hearing by notice thereof.

(I) Without limitation upon the authority of the Presiding Examiner to convene conferences prior to, or subsequent to the date herein fixed pursuant to the provisions of Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner herein designated shall commence at 10:00 A.M. (EDST) on May 18, 1965 in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., 20426, for the purpose of effectuating the intent of the Commission as hereinabove set out.

(J) Notices and petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the Commission's

Rules of Practice and Procedure, Section 1.8 and 1.37(f) [18 CFR 1.8 and 1.37(f)] on or before March 15, 1965.

INITIAL DECISION

OF THE PRESIDING EXAMINER GRANTING CERTIFICATE

(Issued November 4, 1964)

FRIBOURG, *Presiding Examiner:* This proceeding is brought to consider the application of Colorado Interstate Gas Company for a certificate of public convenience and necessity under Section 7(c) of the Natural Gas Act in order to construct and operate some 800 feet of 3-inch pipeline and the associated gas measurement facilities. The facilities would be at its Kansas-Nebraska meter station in Weld County, Colorado, whence the proposed pipeline would extend northward into Wyoming. There sales would be made to Cheyenne Light, Fuel & Power Company (Cheyenne) for resale in the town of Pine Bluffs, Wyoming. The estimated annual third-year volume of deliveries to Cheyenne is 74,873 Mcf.

The Question Presented

The economic, financial and engineering feasibility of the project, the adequacy of the gas supply, and the demand for the service, are sufficiently established and are not challenged. The issue, raised by intervenor Kansas-Nebraska Natural Gas Co., Inc., (Kansas-Nebraska) relates to the fairness of Colorado Interstate making this sale to Cheyenne on one rate schedule while selling to Kansas-Nebraska on another. Kansas-Nebraska claims that the difference is discriminatory and hence contrary to the public convenience and necessity, and that to grant the certificate would violate Section 2(a) of the Clayton Antitrust Act, 15 U.S.C. § 13(a). It does not oppose the sale to Cheyenne as such, but only the sale to Cheyenne on terms "which would discriminate against Kansas-Nebraska" (K-N reply brief, page 1).

The Facts

At present, Kansas-Nebraska is the only customer taking gas from Colorado Interstate's 12-inch line from which the proposed 3-inch line would extend. The rate schedule under which it takes from this 12-inch line is known as Colorado Interstate's P-2 rate schedule. The P-1 schedule of that company, under which the proposed sale would be made, is available throughout the entire Colorado Interstate system to any pipeline company, and to any distributor owning substantial transmission facilities, who transports gas to its city-gate sales point or to its distribution system. The demand charges and the commodity charges in the two schedules are identical. The basic difference is that P-2 provides for minimum monthly and annual bills based on a 75 percent load factor, while P-1 merely has a minimum monthly bill equal to the demand charge. Kansas-Nebraska claims that such a difference, applicable to sales from the same line, is discriminatory.

The uncontroverted testimony of staff witness Kaminsky shows that Kansas-Nebraska, an interstate pipeline, has numerous other sources of supply besides Colorado Interstate. It buys from producers in the Anadarko Basin in Kansas and Colorado, the Denver-Julesburg Basin in Colorado and Wyoming, in Wind River and Powder River in Wyoming and from Northern Natural in Nebraska. It is presently proposing (Docket Nos. CP64-250 and CP64-315) to increase its sources of supply other than Colorado Interstate. Cheyenne, on the other hand, is a local distribution company, buying all of its requirements from Colorado Interstate.

The Commission's order authorizing construction of the 12-inch line from which Kansas-Nebraska is now being served also authorized the sale by Colorado Interstate to Kansas-Nebraska. The order was issued July 19, 1963, 30 FPC 356, and took note of the fact that Colorado Interstate would make the sale under the P–2 rate schedule. The order of February 18, 1964 (Docket No. RP64–13) recites that certain changes in the P–2 schedule were tendered for filing on October 7, 1963, that the filing was suspended and became effective subject to refund on November 8, 1963, and that on January 13, 1964, Colorado Interstate moved to terminate the proceedings and tendered for filing a revised P–2 rate schedule. The January 13 revision eliminated a previously proposed rate increase and reduced Kansas-Nebraska's take-or-pay provision from 85 percent to the present 75 percent. Kansas-Nebraska stated that the changes were agreeable to it.

Discussion

Most major pipeline companies differentiate between their partial-requirements and full-requirements customers by means of tariff provisions which impose a minimum load factor upon the partial-requirements customers. That is, there is a take-or-pay provision generally applicable to them designed to protect the pipeline seller from loss in the event that the partial-requirements customer turns to a different source of supply. Should that event occur, and were there no such provision, the pipeline would either have to shift the loss to its other customers or bear it itself.

In its petition to intervene in this proceeding Kansas-Nebraska argued that it would be discriminatory and preferential to authorize the proposed sale to Cheyenne on the P–1 rate schedule while Kansas-Nebraska was required to buy under the P–2 schedule. It urged that

> * * * any certificate issued herein should be conditioned upon both Cheyenne and Kansas-Nebraska being served on the P–1 rate to eliminate any undue preference or advantage and any undue prejudice or disadvantage.

Subsequently, Kansas-Nebraska changed its position. It recognized that to put it on the P–1 rate might, as its counsel stated (Tr. 9):

> * * * not be quite fair, because we have alternative sources of supply and we might take the lower load factor than other P–1 customers. It is conceivable we might, because of these alternative sources of supply. So therefore what we recommend is that all gas sold off this line be sold on the P–2 rate; but that the take or pay requirement in the P–2 rate be reduced to 53 percent, which is approximately what the average load factor of the other P–1 customers is.

In its proposed findings and conclusions, Kansas-Nebraska would have the Examiner deny the certificate unless Colorado Interstate files a new rate schedule applicable to all sales from the 12-inch line,

> * * * the terms of which (1) shall not discriminate in favor of purchasers from the 12-inch line in relation to other purchasers for resale from applicant's system and (2) shall be not less favorable to the purchaser than the existing P–2 Rate Schedule.

In other words, it would require either that the proposed sale be on the present P–2 schedule or that that schedule be revised (by reducing the take-or-pay provision) and made applicable to all sales from the 12-inch line. In view of its statement that it would be unfair to impose the present take-or-pay provision on the proposed sale, it is clear that the second alternative is the only one being seriously advanced. What it comes down to is a demand that Colorado Interstate be required to make a take-or-pay provision applicable to the proposed sale, or to revise its rates to Kansas-Nebraska, or both, on pain of denial of the proposed sale.

Section 7 of the Natural Gas Act, though it does not grant the Commission power to suspend a rate authorized in a certificate, permits it to attach to a certificate such conditions as it deems necessary to give consumers the "complete, permanent and effective bond of protection from excessive rates and charges" for which the Supreme Court found the Act was framed. *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378, 388. In cases too numerous to mention, the Commission has certificated sales of natural gas upon condition that the seller reduce the proposed initial price. It does this to protect the public from unnecessarily high rates until such time as the "just and reasonable" price may be fixed in a rate hearing.

What Kansas-Nebraska is asking here is that the proposed rate to Cheyenne be *raised*. It would like a take-or-pay provision of 53 percent to be made applicable to a sale that is expected to be made on a 40 percent load factor. Alternatively, or in combination with such a condition, it wants a reduction in its own gas purchase costs, *i.e.*, a change in Colorado Interstate's P-2 schedule.

The public convenience and necessity do not require a certificate condition that would raise the proposed cost of gas to Cheyenne. As to the demand that the P-2 schedule be changed, it should be observed that a change in an existing rate schedule may not be made without an opportunity for a rate hearing. Changes in existing rates are governed by Sections 4 and 5 of the Natural Gas Act, the former governing the filing of new rate schedules and the latter the examination of existing ones with a view to possible changes in the future. The customers of Colorado Interstate are entitled to notice and an opportunity to be heard.

A reduction in the take-or-pay provision of the P-2 rate would affect not only the customers on the 12-inch line but customers elsewhere as well. The reason for this is that the rates charged under the P-2 schedule are designed not with reference to the 12-inch line but with relation to the seller's cost of service as a whole. The 12-inch line is as much a part of the Colorado Interstate system as is any other part. It is not an entity, but a portion of an interrelated complex. The charges in both the P-1 and P-2 schedules are based on the overall cost of service of the seller. If the take-or-pay provision of the P-2 schedule is reduced and as a result the cost of the service is not recovered, the loss would necessarily fall on Colorado Interstate's other customers or on Colorado Interstate itself. For rate-making purposes, the incremental cost of service attributable to this line is irrelevant. Colorado Interstate's rates taken as a whole must cover its cost of service taken as a whole. If a particular rate does not cover its share of the cost of service, the uncovered part is transferred to customers buying under other rate schedules, or is absorbed by Colorado Interstate.

Furthermore, it cannot be assumed, as all parties here appear to have assumed, that a take-or-pay provision necessarily increases the cost of gas to the buyer. Such a provision, when made applicable to a buyer having alternate sources of supply, may be necessary to protect the seller against a swing to these alternate sources, but it need not operate as a penalty on the buyer. If, for instance, Kansas-Nebraska were to take on an additional contract demand from Colorado Interstate to cover a low-load-factor sale (like Pine Bluffs), the purchase of more gas than necessary to take care of the particular sale would reduce the unit cost and the extra gas could be used to supply new or existing demands elsewhere on the system. To what extent, if any, such use would displace the alternative sources of supply, and how the unit cost of the new purchase would compare with the cost of gas from those alternative sources, are matters for a rate case involving Kansas-Nebraska. Possibly also they would have a bearing on the question of economic feasibility in a Kansas-Nebraska certificate case involving a resale of gas purchased under the P–2 rate. In no event would they be a factor in a Colorado Interstate certificate case, which is what we have here.

Consequently, neither a consideration of the history of the P–2 rate schedule nor an examination of its provisions can answer the question whether it is discriminatory, or whether all gas sold from the 12-inch line should be sold under the same rate schedule. Such matters are appropriate only in a rate hearing, where there can be an examination of all of the seller's rates.

The possible complexities and duration of a rate hearing are amply indicated in the various opinions in the *Lynchburg Gas Co.* v. *F.P.C.*, 336 F. 2d 942, CADC, June 26, 1964. To expand the present proceeding to such a compass would leave Pine Bluffs without natural gas for an indefinite period. The public convenience and necessity do not require this result.

This does not leave Kansas-Nebraska without an avenue of relief. It may ask the Commission to hold a hearing under Section 5 of the Act for a review of Colorado Interstate's rates on the ground of discrimination, which is the ground alleged here in support of the antitrust claim. Such a proceeding could appropriately take into account all the factors bearing on those rates and on the relationship between them, including the restraint brought about by the P–2 rate on the ability of Kansas-Nebraska to do business with its lowest-cost sources of supply, the extent to which it forecloses, or tends to foreclose, Kansas-Nebraska from a substantial share or shares of a substantial market or markets, the increases in costs, if any, which would be borne by Colorado Interstate's other customers were the take-or-pay provision to be reduced or eliminated and Colorado Interstate permitted to raise its rates to them, and whether Colorado Interstate should be required to absorb any reduction in its income that might result from a reduction or elimination of the take-or-pay provisions. See the last paragraph of the opinion of Washington, J., in *Lynchburg Gas Co.* v. *F.P.C.*, *supra*, p. 950.

The Striking of Parts of Intervenor's Testimony

It being impossible, for the reasons above stated, to determine from any examination of rate schedules whether undue discrimination exists, or even whether the differences in their provisions result in any higher cost to Kansas-Nebraska,[1] the Examiner granted motions to strike two portions of the testimony offered by Mr. Thomas Creigh, Jr., a witness for Kansas-Nebraska. One portion related to the negotiations between that company and Colorado Interstate which allegedly resulted in the construction of the 12-inch line and the fixing of the P–2 rate. The company's brief states that those negotiations

> * * * have a bearing on whether the preference and advantage now proposed to be given to Kansas-Nebraska's competitor Cheyenne in the case of

---

[1] Kansas-Nebraska's own witness testified that Kansas-Nebraska is buying under the P–2 schedule at a lower, not a higher, price than Cheyenne would pay under the P–1 schedule at its expected 40 percent load factor for the proposed sale. In the first seven months of this year Kansas-Nebraska's cost of gas bought from Colorado Interstate was 22 cents per Mcf at Kansas-Nebraska's actual 88 percent load factor. At a 75 percent load factor, the level at which the take-or-pay provision would begin to be felt, the average cost would be 22.6 cents per Mcf. Cheyenne, under the P–1 schedule, would pay 25.4 cents because of its lower load factor.

purchases from the same line is "undue" within the meaning of Section 4(b) of the Natural Gas Act.

The Examiner granted the motion to strike because of the inappropriateness of deciding 4(b) questions in a 7(c) case, because the negotiations resulted in a P–2 rate which has since been changed, and because such negotiations are not significant in determining whether the schedule is unduly discriminatory at the present time.

The other portion of Mr. Creigh's testimony which was stricken consisted of his recommendations as to what rates should be charged for service from the 12-inch line and why the P–2 rate should be revised. Revision of the P–2 rate is beyond the scope of this proceeding, for reasons previously given.

The Antitrust Issue

Kansas-Nebraska's claim of a violation of Section 2(a) of the Clayton Act is not properly raised. Its petition to intervene made no mention of the antitrust laws. Its allegation that a sale on the P–1 rate would give Cheyenne an undue preference and advantage because of "the unreasonable difference in rates which results from the minimum take-or-pay provision contained in the P–2 rate" was made in the following context:

> 5. The 12-inch lateral pipeline which extends from Colorado Interstate's main 22-inch Wyoming pipeline to the said three state area was built to serve Kansas-Nebraska and Kansas-Nebraska contemplated making direct sales along this lateral pipeline. Colorado Interstate agreed that Kansas-Nebraska could make these sales as shown by the fact that the P–2 Rate Schedule expressly provides that it is to be available to Kansas-Nebraska along this lateral.
>
> 6. Colorado Interstate breached this agreement by offering to sell to Cheyenne at the P–1 rate at the very end of the lateral pipeline which Kansas-Nebraska made feasible. This sale on the P–1 rate would grant Cheyenne an undue preference and advantage and subject Kansas-Nebraska to an undue prejudice and disadvantage for the reason that Kansas-Nebraska could not compete with Cheyenne for business in this area due to the unreasonable difference in rates which results from the minimum take or pay provision contained in the P–2 rate. * * *

thus the petition's claim of undue preference, reasonably read, refers to the Natural Gas Act and in the paragraph immediately following those quoted the petition explicitly refers to Section 4(b) in that connection. The antitrust claim was raised only at the hearing.[3]

The Commission's notice of application and date of hearing, issued July 8, 1964, provides for a hearing to be held "* * * pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by Section 7 of the Natural Gas Act * * *", and not under any other act or any other part of that act. There was no objection to the form of the Commission's notice, or any attempt to have its scope expanded. It would be manifestly unfair to try issues affecting other customers of Colorado Interstate without giving them adequate notice of what was to be tried. The Commission itself had no notice that antitrust issues were to be raised.

Even if the raising of Clayton Act issues were procedurally proper, however, the question whether to rule on it is, in these circumstances, a matter of discretion. There are situations in which it is desirable or even necessary to consider antitrust matters in a certificate case, *City of Pittsburgh* v. *F. P. C.*, 237 F. 2d 751, 754; *Natural Gas Pipeline Company of America*, Docket No. CP62-243, Examiner's Decision issued September 10, 1964. In some certificate cases, indeed, the antitrust laws can assume overriding importance as in *California* v. *F. P. C.*, 369 U.S. 482. Those, however, are cases in which the antitrust issues have so intimate a relationship to the merits of the certificate issues that to decide, or to fail to decide, such questions would fix the positions of the parties beyond any reasonable possibility of subsequent correction. They are, moreover, cases in which the interrelation of rate levels does not lie at the heart of the antitrust questions.

---

[3] The breach of agreement alleged in the quoted paragraphs was not urged at the hearing and is not now relied on (K–N reply br., p. 1).

This is not such a case. Here the question that intervenors attempt to raise is whether the take-or-pay provision in one rate schedule is justified absent a like provision in the other. This is a matter to be decided under the rate sections of the Natural Gas Act. Antitrust questions can, in proper circumstances, be raised in rate cases. *Lynchburg Gas Co.* v. *F.P.C.*, 336 F. 2d 942 (CADC June 26, 1964). Where they can be answered only with reference to rates, it is usually best that they be decided in rate cases, where all relevant considerations may be brought up, including the rate structure of the seller and the supply and requirements situation of the buyer.

The procedure which Kansas-Nebraska here suggests—conditioning the certificate on the filing of a new rate schedule by Colorado Interstate—would probably not avoid a rate case. As previously noted, Colorado Interstate's other customers are entitled to protest against such a filing being allowed to become effective, and a rate case would result from such a protest. And if Colorado Interstate were to seek review of a Commission order imposing such a condition it would be difficult for any court (as it would in the first instance be difficult for the Examiner and the Commission) to determine the merits of Kansas-Nebraska's position without reference to the rate-case matters alluded to above.

In a rate proceeding Kansas-Nebraska, on a properly drawn complaint about the present terms of the rate schedules, could seek a change in the "applicability" portion of the schedule so as to make the P-1 or some other schedule, such as G-1, available to it for any new purchases it might make. Staff counsel took the position at the hearing that the P-1 schedule is already available to it. Whether this is true, and if not whether it should be made true, can be decided in a Section 5 proceeding. (It may be that Paragraph 2 of the P-2 rate schedule[3] prohibits Kansas-Nebraska from buying under the P-1 schedule, but the Examiner makes no finding in this regard since the issue is not before him).

Conceivably, a Section 5 proceeding could result in an order permitting Kansas-Nebraska to make new purchases under P-1 while continuing its present ones under P-2. That would dispose of any claim that there is undue rate discrimination with respect to new business. Plainly, such an order is beyond the scope of the present proceeding, and the Examiner expresses no opinion on whether it would be appropriate in any other. The possibility is mentioned merely to emphasize the undesirability of deciding under Section 7 an antitrust question which a Section 5 proceeding may obviate.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence adduced and the briefs filed, it is found and concluded, in addition to the findings and conclusions heretofore stated, that:

---

[3] Colorado Interstate Gas Co. FPC Gas Tariff First Revised Volume No. 1, Par. 2 of Second Revised Sheet No. 11B, March 17, 1964. No doubt the corresponding provision of other rate schedules would also be considered in a proceeding relative to this issue.

(1) The applicant is engaged in the transportation of natural gas in interstate commerce and the sale in interstate commerce of natural gas for resale for ultimate public consumption and is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The proposed facilities of the applicant as more fully set forth in its application and the evidence of record in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by the applicant are subject to the requirements of Section 7(c) of the Natural Gas Act.

(3) The applicant is able and willing to do the acts and perform the services proposed, and to conform to the provisions of the Natural Gas Act as amended and the rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed delivery of natural gas by applicant are required by the public convenience and necessity and a certificate therefor should be issued.

ORDER

WHEREFORE, *It is Ordered*, that a certificate of public convenience and necessity be and the same is hereby issued authorizing applicant to construct and operate the proposed facilities as hereinbefore described.

ARTHUR H. FRIBOURG,
Presiding Examiner

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

INTERNATIONAL PAPER COMPANY, PROJECT NO. 2375

ORDER ISSUING LICENSE (MAJOR)

(Issued February 18, 1965)

Application was filed on May 31, 1963, by International Paper Company (Applicant) of New York, New York, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2375, known as the Otis-Livermore Falls Project, located on the Androscoggin River in the vicinity of the villages of Riley, Jay, Chisholm and Livermore Falls, in the counties of Oxford, Franklin and Androscoggin, Maine.

According to the application, the project, which consists of 4 developments known as Riley Mill, Jay Power Plant, Otis Mill and Livermore Mill, was constructed commencing in 1888 and ending in 1915, except that in October of 1950 and 1956, respectively, the original rock-filled timber crib dam of the Jay Power Plant was replaced by two concrete sections and in connection with Riley Mill, a small concrete wing wall was added and in July, 1936 and in August of 1942 a portion of the timber crib dam extending downstream to the forebay was faced on the downstream side by a concrete gravity section.

By its order issued July 24, 1958,[1] the Commission found that the Androscoggin River throughout its entire length is a "navigable water" as defined in Section 3(8) of the Federal Power Act and "navigable water of the United States" within the meaning of Section 23(b) of the Act. The basis of this finding was that the Androscoggin is presently, and for more than a century has been used for the transportation of logs and other forest products by water.

---

[1] *New Hampshire Water Resources Board,* Docket No. E-6807, 20 FPC 99-101.

The Secretary of the Army and the Chief of Engineers have approved the plans of the project structures affecting navigation, pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interest of fish and wildlife.

The Department of Health, Education, and Welfare has reported that while the impoundments included in the subject application do not constitute a source of pollution, they may increase the severe pollution problems which have developed in the Androscoggin River by reducing the reaeration and natural stream purification rates. However, the Department added that the solution to the pollution problem lies in suitable treatment of effluent wastes prior to discharge rather than in river regulation.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of October 1, 1950 and a termination date of December 31, 1993.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of New York, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public use, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is as specified in Article 30 herein, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(6) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project, except that portion of Exhibit M which described the transmission lines.[2]

The Commission orders:

(A) This license is hereby issued to International Paper Company (Licensee) of New York, New York, under Section 4(e) of the Federal Power Act (Act) for a period effective as of October 1, 1950 and terminating December 31, 1993, for the continued operation and maintenance of Otis-Livermore Project No. 2375, located on the Androscoggin River, a navigable water of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

---

[2] We are hereinafter reserving the right to determine at a later date what transmission facilities, if any, should be included in this license as a part of the project works.

(B) Constructed Project No. 2375 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by the following exhibits which formed a part of the application for license.

Exhibit J: Sheet 1 (FPC No. 2375–1) General Map.

Exhibit K: Detail Map.

Sheet No.	FPC No.	Title: Otis-Livermore Falls Project
1	2375–2	Canton Area Above Riley Dam.
2	2375–3	Riley Mill—Jay Power House Area.
3	2375–4	Riley Plant Site.
4	2375–5	Jay Power Plant Area.
5	2375–6	Otis Mill—Livermore Area.
6	2375–7	Otis Mill Site.
7	2375–8	Livermore Mill Area.

(ii) project works consisting of the following 4 sites: Riley Mill—Located upstream from the village of Riley, with the mill and most of the dam in the town of Jay, Franklin County (a small portion of the dam being in the town of Canton, Oxford County). The development includes: (1) an L-shaped concrete-capped rock-filled timber crib about 649 feet long, including an eight foot log sluice, topped with flashboards (about 50 inches high); (2) a pond of about 578 acres in area; (3) a forebay; (4) a stone masonry forebay headgate section about 108 feet long; (5) a stone masonry forebay wall (about 194 feet long); constituting the south wall of grinder room building with turbine intake headgates; (6) a hydromechanical installation of 23 turbines rated at 300 hp each, and one turbine rated at 350 hp; and (7) appurtenant facilities.

Jay Power Plant—Located in the village of Jay. The development includes: (1) a two-sectioned concrete gravity dam (topped with flashboards about 32 inches high), the west section extending about 319 feet from the right bank to the west shore of Pine Island, and the east section extending about 277 feet from the east shore of Pine Island to the powerhouse; (2) a pond of about 206 acres in area; (3) a forebay; (4) a forebay wall extending about 320 feet upstream from the powerhouse, along the left bank; (5) a powerhouse (about 147 feet long, extending from dam to left bank) including six 620 hp turbines connected to five 500 kva generators and one 625 kva generator; and (6) appurtenant facilities.

Otis Mill—Located at the village of Chisholm. The development includes: (1) a concrete wing wall, about 69 feet long and 4 feet in average height, along the right bank; (2) an L-shaped dam consisting of: (a) a rock-filled timber crib section about 379 feet long (about 18 feet, average height, and topped with two-foot flashboards) extending from the right bank, with a log sluice (about 15 feet wide), and (b) a concrete wall about 198 feet long extending downstream; (3) a stonemasonry forebay headgate structure about 189 feet long extending from the concrete wall to the left bank; (4) a pond about 115 acres in area; (5) a forebay; (6) a masonry forebay spillway; (7) a masonry forebay wall (about 287 feet long) constituting north wall of grinder room building, with turbine intake headgates; (8) a combination hydro-mechanical and hydroelectric installation of six turbines of 895 hp each, 3 hydro-mechanical only and 3 combined hydro-mechanical and hydroelectric (generators rated at 950 kva and 1.0 pf, 750 kva and 0.8 pf, and 1180 kva and 1.0 pf), nine turbines of 576 hp each (hydro-mechanical), one 500 hp and one 775 hp turbine (hydro-mechanical); and (9) appurtenant facilities.

Livermore Mill—Located about ¾ mile downstream from Otis Mill. The development includes: (1) an L-shaped concrete dam and spillway section (average height about 9½ feet and topped by 28 inch flashboards) extending from the right bank about 318 feet, then downstream about 281 feet; (2) a concrete wall and forebay headgate structure (about 250 feet long); (3) a pond about 46 acres in area; (4) a forebay; (5) a concrete forebay spillway section (about 594 feet long); (6) a concrete wall (about 170 feet long) constituting north wall of woodpulp mill building, with turbine intake headgates; (7) a hydro-mechanical and hydroelectric installation of seven turbines of 1200 hp each, 3 hydro-mechanical only and 3 combined hydro-mechanical and hydroelectric (3 generators, each rated 1180 kva and 1.0 pf), and one 1128 hp turbine (hydroelectric only) connected to a 1175 kva—0.85 pf generator; and (8) appurtenant facilities.

The location, nature and character of the project works is more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L:

Exhibit M:

Twenty typewritten pages, entitled "General Description and Specifications of Mechanical, Electrical and Transmission Equipment and Appurtenances" (except the portion describing transmission lines), filed in the Commission May 31, 1963.

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3, (Revised August 1, 1964) entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114) which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles.

Article 30. The Licensee shall pay to the United States the following annual charges:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. Effective as of October 1, 1950, through June 30, 1958, for the Jay Power Plant development the authorized installed capacity for such purposes is 3,300 horsepower. Effective as of July 1, 1958, for the Riley Mill, Jay Power Plant, Otis Mill, and Livermore Mill developments, the authorized installed capacity is 32,100 horsepower.

Article 31. The Commission reserves the right to determine at a later date what transmission facilities, if any, shall be included in this license as part of the project works.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license to the extent indicated therein.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

THE JUPITER CORPORATION, DOCKET NO. RI63-212; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-58

ORDER DEFERRING ACTION ON PETITION FOR DECLARATORY ORDER AND MOTION TO DISMISS PROCEEDINGS IN DOCKET NO. RI63-212, AND DENYING ALTERNATIVE MOTION TO SEVER AND STAY PROCEEDINGS, AND MOTION FOR ORAL ARGUMENT

(Issued February 18, 1965)*

On January 8, 1965, The Jupiter Corporation (Jupiter), the respondent in Docket No. RI63-212, filed with this Commission documents entitled *Petition for Declaratory Order and Motion to Dismiss Proceedings in Docket No. RI63-212, Alternative Motion to Sever and Stay Proceeding* and *Motion for Oral Argument*, respectively.

In the first of those pleadings Jupiter asserted that its Rollover Field operations and facilities are not within the ambit of the Commission's regulatory power under the Natural Gas Act, that Jupiter carries on only exempt gathering processes, that what appears to be a purchase of gas from the producers and the resale thereof to Tennessee Gas Transmission Company is in fact only a gathering operation, and requested the Commission to issue an order declaring that it has no jurisdiction over Jupiter and consistently therewith to dismiss the rate investigation in Docket No. RI63-212.

---

*See order denying reconsideration, etc., issued March 12, 1965, 33 FPC 534.

In the Alternative Motion to Sever and Stay the Proceedings, Jupiter requested that the Commission sever the proceedings in the certificate proceeding, Docket No. CP65-58, from those in the rate investigation proceedings in Docket No. RI63-212 and stay the proceedings in Docket No. RI63-212 until it has issued a final order in Docket No. CP65-58. This motion is based upon the theory that the standards to be used in a rate proceeding differ from those applicable to a certificate proceeding and that in a consolidated proceeding there would probably be a confusion of such standards.

On January 18, 1965, Long Island Lighting Company, an intervenor herein, filed an answer to the motions above-described and on the same day Phillips Petroleum Company and Kerr-McGee Oil Industries, Inc., producer intervenors, filed a joint answer to the petition for a declaratory order and the alternative motion to sever. On February 2, 1965, the Staff of the Commission filed answer and objection to the petition and the motion last above referred to.

The answers to the petition for a declaratory order raise questions of fact which can only be fairly and equitably decided upon a record made after hearing and an opportunity for the presentation of evidence and argument by all of the participants in the proceeding. Since the determination of the question of public convenience and necessity arising in the certificate proceeding cannot be determined in the absence of evidence showing the propriety of the proposed lease rental charges, no useful purpose would be served by severing the rate investigation from the certificate proceeding.

Under the circumstances, there remains no basis for setting these matters down for oral argument before the Commission.

In our order of February 12, 1965, *supra*, p. 204, we rejected Jupiter's request for a further continuance *inter alia* until we could pass upon petitions and orders here disposed of. In the light of actions which have since transpired, we would be willing to provide Jupiter with an additional period of 30 days from the date of this order to prepare and serve its evidence in Docket No. RI63-212 provided Jupiter advises us in writing or by telegram by the close of business on Friday, February 19, 1965, that it will file and serve any such evidence within such additional period. This will give Jupiter the full period originally given for preparation of its evidence, a period of time which Jupiter has never suggested was insufficient for this purpose.

The Commission orders:

(A) The Alternative Motion to Sever and to Stay the Proceedings, and the Motion for Oral Argument, and each of them be, and is, hereby denied.

(B) Action on the Petition for Declaratory Order and Motion to Dismiss Proceedings in Docket No. RI63-212, hereby is deferred for consideration when the record in these proceedings is before us for determination.

(C) The time within which Jupiter is required to file and serve its evidence shall be extended for 30 days from the date of this order provided Jupiter meets the conditions set forth above. In the event Jupiter avails itself of this opportunity all other dates established by our order of February 3, 1965, will be advanced accordingly; otherwise, the dates prescribed by that order shall stand.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UTAH POWER & LIGHT COMPANY, PROJECT NO. 814

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued February 18, 1965)

Application was filed on July 2, 1964 under Section 6 of the Federal Power Act (Act) by Utah Power & Light Company, of Salt Lake City, Utah, for further amendment of its license for major Project No. 814, located on LaBaron Creek in Beaver County, Utah. The project affects lands of the United States within the Fishlake National Forest.

The amendment sought would authorize the reconstruction of the LaBaron Dam under an agreement between the licensee and the Utah Fish and Game Department, whereby the Department will reconstruct the dam and increase the storage capacity of LaBaron Reservoir to provide fish culture and develop the area for recreational purposes. Financing of the reconstruction would be by the Department as an Accelerated Public Works Project.

The redevelopment would consist of: a compacted earth filled dam approximately 400 feet long, 26 feet high, 14 feet wide at the top and 140 feet wide at the bottom; a 12-foot by 5-foot concrete spillway; an 18-inch inside diameter concrete outlet pipe controlled by a slide gate; and a reservoir with an area of about 23 acres and a storage capacity of about 257 acre-feet.

The Department of the Interior, in reporting on the application recommended for inclusion in any amendment of the license, certain conditions in the interests of fish and wildlife resources, recreation, and archeological survey and salvage.

The Department of Agriculture, in reporting on the application, advised that it had no objection to the amendment as applied for and that it would not interfere or be inconsistent with the purposes for which the Fishlake National Forest was created or acquired.

The Utah Fish and Game Department advised that it was anxious to proceed with the construction of LaBaron Dam under the Accelerated Public Works Program; the plans had been approved by the U.S. Forest Service and State Engineer of Utah; and that the Department supported the application.

Commission staff studies of the proposed dam show that it is safe and stable and would develop the site for the storage purpose for which it is to be constructed. Inasmuch as the LaBaron Dam is described in Article 2 of the license as a dam and reservoir on LaBaron Creek, known as Blainey Reservoir, a revision in the license description of LaBaron Dam is unnecessary.

By letter dated July 6, 1964, the licensee requested Commission permission for pre-amendment commencement of the reconstruction of the LaBaron Dam for the reason that the Utah Fish and Game Department was anxious to commence construction because the project is located in a high altitude and the construction period is short. By letter dated August 6, 1964, the Commission advised the licensee that any construction prior to Commission action on the application would be at the licensee's risk.

Among other exhibits filed as part of the application, is Exhibit K (FPC No. 814-46) which although generally in conformity with the Commission's rules and regulations, does not show the area of lands of the United States occupied by the enlarged project nor the increase in area over the project as originally proposed. We are herein requiring the licensee to file an amended Exhibit K at a future date.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) The following described exhibits filed as part of the application conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit M (FPC No. 814-35) and Exhibit M-2 (FPC No. 814-36), now part of the license and which have been superseded, should be eliminated from the license:

Exhibit K: (FPC 814-46) LaBaron Reservoir Dam Reconstruction; and

Exhibit L: (FPC No. 814-47 and -48) General Design Drawings—LaBaron Reservoir Dam Reconstruction

The Commission orders:

(A) The license for Project No. 814 is hereby further amended, effective as of August 1, 1964, to authorize the reconstruction of the LaBaron Dam in the manner described in the third paragraph of this order, and to include therein the following additional articles:

Article 24. The Licensee shall within one year from the date of issuance of this amendment submit for Commission approval Exhibit K for the enlarged LaBaron Dam and Reservoir prepared in accordance with the Commission's rules and regulations.

Article 25. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 26. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 27. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 28. The Licensee shall make available to the Department of Anthropology, University of Utah, Salt Lake City, Utah, funds not to exceed a total of $1,000 for the purpose of undertaking a field survey and archeological salvage in the area involved in the reconstruction of the LeBaron Dam.

(B) The exhibits described in finding (2) above as conforming to the Commission's rules and regulations are hereby approved as part of the license, as amended, for Project No. 814, and the exhibits described in the same finding as being superseded are hereby eliminated from the license for the project.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of the issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

AREA RATE PROCEEDING, ET AL. (HUGOTON-ANADARKO AREA), DOCKET NO. AR64–1, ET AL.; AREA RATE PROCEEDING, ET AL. (TEXAS GULF COAST AREA), DOCKET NO. AR64–2, ET AL.

ORDER GRANTING APPEAL AND CLARIFYING DEADLINE FOR PRESENTATION OF EVIDENCE

(Issued February 19, 1965)

In our order of January 22, 1965, we set a deadline of May 15, 1965, for the presentation of direct evidence in these proceedings with the proviso that "* * * cost exhibits which are primarily dependent upon data derived from the all-areas questionnaire or data derived from utilization by private parties of FPC Form No. 20 should be deferred beyond May 15, 1965. * * *" 33 FPC 99. At a prehearing conference of January 29, 1965, the Presiding Examiners ruled that, according to the wording of our order, non-cost presentations and exhibits were due on or before May 15 even if they were dependent on data from the all-areas questionnaire or FPC Form No. 20.* Several producer groups have appealed the Examiners' ruling and the Presiding Examiners, finding that extraordinary circumstances existed, referred the appeal to us pursuant to Section 1.28(a) of the Commission's Rules of Practice and Procedure. We grant the appeal. All presentations, including non-cost presentations, which are primarily dependent upon data derived from the all-area questionnaire or which are dependent upon data derived from Form No. 20 should be relieved of the May 15, 1965, deadline. However, when it becomes appropriate to set deadlines for such post-May 15 presentations, the Examiners should fix the earliest reasonable deadlines.

---

*Pursuant to our order of January 25, 1965, in these proceedings, copies of Form 20 have been made available to Hunt Oil Co., *et al.*, and to Oklahoma Independent Petroleum Association for private circulation by them.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

COLUMBIA RIVER BASIN, HEADWATER BENEFIT DETERMINATION, DOCKET NO. E-6384

FINDINGS AND ORDER

(Issued February 19, 1965)

This order determines payments to the United States under subsection 10(f) of the Federal Power Act (16 U.S.C. 803(f)) and approves an agreement for payments to licensees under section 13.1 of the Commission's Regulations under the Federal Power Act for headwater benefits provided to non-Federal licensed projects in the Columbia River basin from September 1, 1963, through August 31, 1964.

No headwater benefits accrued in the Columbia River basin before January 1, 1949.[1] The Commission has fixed payments to the United States for headwater benefits provided from January 1, 1949, through December 31, 1956,[2] and from September 1, 1961, through August 31, 1963.[3] It also has approved payments to licensees for headwater benefits provided to non-Federal projects from September 1, 1961, through August 31, 1963.[4] The Commission has yet to determine payments to the United States for headwater benefits provided from January 1, 1957, through August 31, 1961, and to determine or approve payments to licensees for headwater benefits provided to non-Federal projects from January 1, 1949, through August 31, 1961.

The present determination of payments to the United States is for headwater benefits provided by the Hungry Horse and Grand Coulee projects, operated by the Bureau of Reclamation, and the Albeni Falls project, operated by the Corps of Engineers. The non-Federal projects which received headwater benefits from one or more of these three Federal projects are as follows:

Owner	Project	Project No.
The Montana Power Co	Kerr	5
The Montana Power Co	Thompson Falls	1869
The Washington Water Power Co	Noxon Rapids	2075
The Washington Water Power Co	Cabinet Gorge	2058
Public Utility District No. 1 of Pend Oreille County, Wash.	Box Canyon	2042
Public Utility District No. 1 of Chelan County, Wash	Rocky Reach	2145
Public Utility District No. 1 of Chelan County, Wash	Rock Island	943
Public Utility District No. 2 of Grant County, Wash	Wanapum	2114
Public Utility District No. 2 of Grant County, Wash	Priest Rapids	2114

The method used in the present determination of headwater benefits payments to the United States is similar to the method used in determining these payments from September 1, 1961, through August 31, 1963. This method is described in detail in the Commission's order of February 6, 1963, titled *Columbia River Basin, Headwater Benefit Investigation*, 29 FPC 238. The reallocation of costs for the Grand Coulee project by the Secretary of the Interior and the installation of the Wanapum development, Project No. 2114, by the Public Utility District No. 2 of Grant County account for the differences in annual payments herein and those for the period covered by the earlier order.

---

[1] 11 FPC 832.

[2] 16 FPC 1388 (1956); 20 FPC 807 (1958); 31 FPC 1044 (1964).

[3] 29 FPC 238 (1963).

[4] *Id.*

By letters dated December 17, 1964, the Commission staff informed the Department of the Interior, Corps of Engineers, The Montana Power Company, The Washington Water Power Company, Public Utility No. 1 of Chelan County, Washington, Public Utility District No. 1 of Pend Oreille County, Washington, and Public Utility District No. 2 of Grant County, Washington, that the staff proposed to recommend to the Commission the following headwater benefits payments to the United States:

Payer	Payments to the United States		
	For headwater benefits	For FPC cost of studies	Total
The Montana Power Co.	$188,500	$135	$188,635
The Washington Water Power Co.	251,200	180	251,380
PUD No. 1 of Pend Oreille County	51,600	35	51,635
PUD No. 1 of Chelan County	449,100	320	449,420
PUD No. 2 of Grant County	458,300	330	458,630
Total	1,398,700	1,000	1,399,700

The Department of the Interior, The Montana Power Company, and Public Utility District No. 1 of Chelan County, by letters dated January 14, 1965, January 8, 1965, and January 13, 1965, respectively, responded that the proposed payments were acceptable. The Corps of Engineers by letter of January 8, 1965, stated that it believed that its comments were not needed.

On November 5, 1964, The Washington Water Power Company on behalf of itself and the other non-Federal parties designated above, filed the Pacific Northwest Coordination Agreement executed on September 1, 1963, for approval as a headwater benefits agreement under section 13.1 of the Commission's Regulations under the Federal Power Act. The following headwater benefits payments have been made to licensees by non-Federal parties under the terms of this agreement.

Payer	Payees			
	Montana Power Co.	The Washington Water Power Co.	Pend Oreille PUD No. 1	Chelan PUD No. 1
The Washington Water Power Co.	$67,400			
Pend Oreille PUD	10,200	$4,700		
Chelan PUD	39,300	41,300	$2,400	
Grant PUD	40,000	42,000	2,400	$29,300
Total	156,900	88,000	4,800	29,300

The Commission finds:

(1) It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791–823), particularly subsection 10(f) thereof, that payments as described below be made to the United States for headwater benefits provided in the Columbia River basin by its Hungry Horse, Grand Coulee, and Albeni Falls projects to downstream non-Federal projects from September 1, 1963, through August 31, 1964, and for the costs of making the determination.

(2) The Pacific Northwest Coordination Agreement executed on September 1, 1963, under which payments have been made as described above, constitutes an effective and reasonable method of compensating licensees for headwater benefits

provided in the Columbia River basin to non-Federal parties from September 1, 1963, through August 31, 1964.

The Commission orders:

(A) The payments to the United States for headwater benefits provided in the Columbia River basin by its Hungry Horse, Grand Coulee, and Albeni Falls projects to downstream non-Federal projects from September 1, 1963, through August 31, 1964, are assessed under subsection 10(f) of the Federal Power Act as follows:

Payer	*For headwater benefits*
The Montana Power Co	$188,500
The Washington Water Power Co	251,200
PUD No. 1 of Pend Oreille County	51,600
PUD No. 1 of Chelan County	449,100
PUD No. 2 of Grant County	458,300
Total	1,398,700

(B) The several parties shall pay to the Federal Power Commission to defray the cost of making this determination, the sum of $1,000, to be divided as follows:

Payer	*For FPC cost of studies*
The Montana Power Co	$135
The Washington Water Power Co	180
PUD No. 1 of Pend Oreille County	35
PUD No. 1 of Chelan County	320
PUD No. 2 of Grant County	330
Total	1,000

(C) The payments specified in paragraphs (A) and (B) shall be paid within sixty days from the date of issuance of this order.

(D) The payments specified in the Pacific Northwest Coordination Agreement executed on September 1, 1963, are approved under section 13.1 of the Regulations under the Federal Power Act with respect to settlement for headwater benefits provided in the Columbia River basin by licensees to non-Federal projects from September 1, 1963, through August 31, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

PUBLIC SERVICE COMPANY OF OKLAHOMA, DOCKET NOS. E-7179 AND E-7196

ORDER TERMINATING PROCEEDINGS

(Issued February 19, 1965)

This order terminates two proceedings initiated to insure continuity of wholesale electric supply for wholesale electric customers served by Public Service Company of Oklahoma (Public Service), Tulsa, Oklahoma. Representations by Public Service and upon behalf of the customers affected, the Cities of Altus, Duncan and New Cordell, Oklahoma, show further hearings to be unnecessary.

Initially, the Commission by order of suspension and hearing issued August 26, 1964, Docket No. E-7179, questioned the lawfulness of a provision set forth in Public Service's Rate Schedule FPC No. 159, Supplement No. 2, wherein the company reserved "* * * the option * * * to terminate and cancel * * *" its contractual arrangements providing for wholesale service "* * * in the event any regulatory body having jurisdiction thereof should lawfully decrease the rate chargeable to the City * * *". Under that rate schedule wholesale electric service is rendered to New Cordell. The Commission's second order, issued December 3, 1964, 32 FPC 1396, Docket Nos. E-7179, E-7196, questioned the lawfulness of similar provisions in Public Service's Rate Schedules for service to Altus and Duncan, Oklahoma, FPC No. 23, Supplement No. 5, and FPC No. 126, Supplement No. 3, respectively.

Consideration of the written comments of Public Service and the three cities* concerning the operative effects of the questioned provision indicates that the Company does not thereby seek unfair advantage over its wholesale customers either in conditions of service or continuation thereof. The Commission has full and continuing regulatory authority over all interstate wholesale electric services by Public Service. These include the authority of the Commission to suspend and set for hearing any threatened termination of service and authority of the Commission to direct interconnections and rendition of electric service. See sections 202(b), 205 and 206 of the Federal Power Act; and Sections 35.1, 35.3 and 35.15 of the Commission's Regulations under that Act.

The Commission finds:

It is necessary and appropriate for the purposes of the Federal Power Act, and the Commission's Regulations thereunder, that further proceedings in the above entitled matters be terminated as hereinafter ordered.

The Commission orders:

The proceedings instituted by orders of the Commission issued August 26, 1964, Docket No. E-7179 and December 3, 1964, Docket Nos. E-7179 and E-7196 are hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, ET AL., DOCKET NO. CP64-270, ET AL.

ORDER REJECTING AND DISMISSING APPEAL

(Issued February 19, 1965)

On January 12, 1965, the presiding examiner certified an appeal to the Commission by East Tennessee Natural Gas Company (East Tennessee) from the presiding examiner's rulings on January 5 and 6 in the course of hearings on the competitive applications to provide additional gas supplies to the Chattanooga area. The examiner's ruling excluded certain evidence offered by East Tennessee relating to the voluntary rate reduction to which East Tennessee has committed itself in the event its application in Docket No. CP65-66 is certificated and to the economic impact on the remainder of the East Tennessee system which will be occasioned by certification of a second source of gas supply to the

---

*Letters of Public Service Company of Oklahoma dated November 20, 1964, City of Altus, Oklahoma, dated December 17, 1964, City of Duncan, Oklahoma, dated December 15, 1964 and City of New Cordell, Oklahoma, dated December 16, 1964.

Chattanooga area. As we understand the examiner's statement in excluding the exhibits, he did so in each instance on the grounds, *inter alia*, that the methods used in their preparation were so defective as to defeat their ability to contribute to the proof of the proposition for which they were offered.

A memorandum in support of the appeal certified by the presiding examiner was filed by East Tennessee on January 15. Transcontinental Gas Pipe Line Corporation (Transco), Southern Natural Gas Company (Southern), Chattanooga Gas Company (Chattanooga) and the Commission staff have filed their responses in opposition.

We have reviewed the proffered evidence, the argument of Counsel, the examiner's ruling thereon, and the memoranda in support thereof and appeal therefrom. It is of course fundamental that the presiding examiner be afforded a wide range of discretion in controlling the proceedings before him and in determining the materiality of proffered evidence. Without determining whether evidence of the general type sought to be adduced would ever be material in a proceeding in this nature, we find nothing in the circumstances of this case which necessitates our review of the presiding examiner's ruling at this stage of the proceedings. East Tennessee may, of course, renew its appeal on issuance of the presiding examiner's initial decision.

The Commission finds:

The appeal of East Tennessee from the presiding examiner's rulings on the exclusion of evidence is premature.

The Commission orders:

The appeal of East Tennessee of January 12, 1965, is dismissed as premature.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

UNITED GAS PIPE LINE COMPANY, DOCKET NOS. RP61-18, RP63-1 AND RP65-1

ORDER REJECTING APPLICATION FOR REHEARING AND DENYING REQUEST FOR RECONSIDERATION

(Issued February 19, 1965)

On January 21, 1964, Texas Eastern Transmission Corporation (Texas Eastern) filed an Application for Rehearing of Paragraphs (C) and (D) of our order, issued on December 23, 1964, 32 FPC 1515, in the above-identified dockets. The challenged provisions of that order[1] required United Gas Pipe Line Company (United) to retain certain presently determined and future refunds pending further order of the Commission directing the disposition of such amounts.

Previously, on December 28, 1964, Texas Eastern objected to these retention provisions in a telegram which we treated as a petition for reconsideration, since our interlocutory action requiring retention of such refunds was not subject to rehearing. By order issued on December 31, 1964, 32 FPC 1559, we denied the request for reconsideration.[2]

In its application for rehearing, Texas Eastern advances a number of reasons why it believes any refusal on the Commission's part to order United to pay over the amounts in question to it without condition or limitation would be legally or equitably unsound. We do not believe it necessary or appropriate to consider these claims, here, since they are all considerations which Texas Eastern can restate and which we will consider in reaching our final determination upon the basis of the factual record made in the hearing to be held in this matter.

---

[1] Order Approving Rate Settlement and Requiring Retention of Certain Refunds.

[2] Order Denying Request for Reconsideration of Severable Provision Requiring Retention of Certain Refunds.

Texas Eastern also objects to our previous conclusion that our action in ordering United to hold the amounts pending subsequent deliberation as to the proper disposition was merely interlocutory. Aside from the mere assertion that we erred in so concluding, it states no basis for the contention. We think it is patently incorrect. The fact that as to all other facets of this proceeding we have approved a settlement agreement satisfactory to all parties, including Texas Eastern, we cannot convert into a final determination our intention to conduct further proceedings on the appropriate disposition of refunds United is required to make. Texas Eastern will, of course, be fully heard on all relevant claims before we reach any conclusion adverse to its claims to entitlement to the refunds from United. We reiterate that we have not yet determined whether it is or is not entitled to retain any or all of such amounts.

However, Texas Eastern's apparent view that the Commission must decide the validity of its claims on the pleadings and cannot in the exercise of its discretion defer such determination until after it can do so in the light of a full hearing record in an ancillary proceeding in which other interested parties will also have an opportunity to present factual information and legal arguments they may deem material is clearly lacking in merit. Accordingly, since an application for rehearing does not lie under Section 1.34 of our Rules of Practice and Procedure from interlocutory actions of the Commission and Texas Eastern has advanced nothing to persuade us that we should abandon the course of action prescribed or indicated in Paragraphs (C) and (D) of our order of December 23, 1964, we shall reject the application for rehearing and deny it, considered as a petition for reconsideration.

The Commission orders:

(A) Texas Eastern's Application for Rehearing of Ordering Paragraphs (C) and (D) of our order issued December 23, 1964, hereby is rejected.

(B) Texas Eastern's pleading classified as a request for reconsideration hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

THE ATLANTIC REFINING COMPANY, DOCKET NOS. G-9283 AND G-9284, ET AL.[1]

ORDER AMENDING ORDER TERMINATING PROCEEDINGS, AND PRESCRIBING REFUNDS

(Issued February 23, 1965)

By settlement orders issued herein on October 8, 1964, 32 FPC 933, and on January 6, 1965, 33 FPC 23, we terminated certain Section 4(e) proceedings and did not require refunds in those instances in which the increased rates had not been collected. It now appears that in certain of such proceedings the increased rates were placed in effect, subject to refund, and collected. Accordingly, we shall amend the order herein of January 6, 1965, to provide that Atlantic make appropriate refunds under each of the rate schedules, set forth in the Appendix hereto, where the proposed increased rate was made effective and was charged and collected, subject to refund, from the effective date thereof and the effective date of the settlement rates as provided by the order of October 8, 1964.

---

[1] The additional dockets involved herein are set forth in the Appendix hereto, and the appendix to the order issued herein on January 6, 1965.

The Commission finds:

For the reason hereinbefore set forth, it is appropriate that the order of January 6, 1965, be amended as hereinafter provided.

The Commission orders:

(A) Atlantic shall refund under each of the rate schedules set forth in the Appendix hereto, where the proposed increased rate was charged and collected subject to refund, in accordance with Ordering Paragraphs (D), (E) and (G) of the order of October 8, 1964, and, upon such refund being made the Section 4(e) proceedings listed in the Appendix hereto shall terminate.

(B) Except as hereby amended, the order issued January 6, 1965, shall remain in full force and effect.

APPENDIX

Rate schedule Nos.	Docket Nos.	Proposed increased rate	Effective date of proposed increased rate	Settlement rate
178	RI64-454	13.0536¢	May 18, 1964[1]	13.0¢

281	RI64-546	13.0551¢	June 23, 1964[1]	13.0¢

[1] Proposed increased rate made effective by appropriate motion, but never charged or collected by Atlantic.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. RP65-40

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING AND APPROVING REFUNDS

(Issued February 23, 1965)*

Atlantic Seaboard Corporation (Seaboard) on January 22, 1965, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Seventh Revised Volume No. 1.[1] The proposed change in rates[2] would make effective as of January 1, 1965, a reduction in Seaboard's jurisdictional rates of approximately $554,000 based upon sales for the twelve-month period ended December 31, 1964.

The proposed rate filing, which we have docketed as shown above, reflects a reduction in Seaboard's cost of service based upon the reduction in the Federal corporate income tax rate from 52 percent to 50 percent, as applicable to both Seaboard and to its affiliated gas supplier, United Fuel Gas Company (United). Seaboard also proposes to make refunds to its jurisdictional customers in the total amount of $413,056,[3] which reflect the same reduction in Federal income taxes as of March 1, 1964, through December 31, 1964. Seaboard will credit current billing to reflect the proposed reduction in bills previously rendered for service during the monthly periods commencing January 1, 1965.

---

*Reconsideration denied by order issued April 8, 1965, 33 FPC 713.

[1] Fifth Revised Sheets Nos. 26 and 28; Sixth Revised Sheets Nos. 7, 12, 16A and 17A; Seventh Revised Sheets Nos. 22 and 24.

[2] See Appendix A hereto for proposed rate levels.

[3] Exhibit No. 3 of Seaboard's filing sets out the refunds to be paid to each jurisdictional customer.

Seaboard states that the proposed reduction is made pursuant to a letter of intent filed on February 24, 1964, by The Columbia Gas System, Inc., which informed the Commission that Seaboard would file the subject reduction following final determination of its rate levels in Docket No. G–20270, *et al.* On December 24, 1964, 32 FPC 1529, the Commission issued an order in those proceedings approving Seaboard's calculations of prospective rate levels and refunds in accordance with Opinion Nos. 430, 31 FPC 1342 and 430–A, 32 FPC 1106. The proposed filing is not intended to change or otherwise affect these existing obligations of Seaboard.

Seaboard requests the waiver of its compliance with the requirements of the Commission's rules and regulations as may be necessary to permit the tendered tariff sheets to become effective as of January 1, 1965, as proposed. No protest or objections to Seaboard's proposed reduced rates have been received.

The Commission finds:

(1) Good cause exists for waiving the notice requirement of Part 154 of the Commission's Regulations under the Natural Gas Act and for permitting the revised tariff sheets specified above to become effective as of January 1, 1965.

(2) The proposed revised tariff sheets and the rate reductions and refunds as proposed by Seaboard are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and such tariff sheets should be accepted for filing to be effective and the proposed refunds should be approved, as hereinafter provided and ordered.

The Commission orders:

(A) The notice requirement of Part 154 of the Commission's Regulations under the Natural Gas Act is hereby waived and the revised tariff sheets specifically described hereinabove are accepted for filing to be effective as of January 1, 1965, and the refunds proposed by Seaboard as above described are hereby approved.

(B) This order shall not be construed to change or otherwise affect the existing obligations of Seaboard relating to refunds and rate reductions under orders heretofore issued by the Commission in proceedings involving Seaboard; and further, this order is without prejudice to any findings or orders which have been made or which may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Seaboard, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against Seaboard or any other persons or parties affected by this order.

CAROLINA PIPELINE COMPANY, COMPLAINANT v. SOUTHERN NATURAL GAS COMPANY, DEFENDANT, DOCKET NO. RP63-4

ORDER PROVIDING FOR SUPPLEMENTAL HEARING, PROVIDING FOR PREHEARING CONFERENCE, AND PRESCRIBING PROCEDURES

(Issued February 23, 1965)

This case is before us pursuant to our order issued November 10, 1964, 32 FPC 1294, reopening this case in order to obtain the parties' view respecting whether the record and findings underlying our Opinion No. 423, issued herein on March 30, 1964, 31 FPC 705, (subsequently referred to as the *Carolina* opinion), satisfy the requirements of *Lynchburg Gas Co.* v. *F.P.C.*, 336 F. 2d 942 (CADC-1964). The question presented is what further proceedings, if any, should be undertaken in this case in light of the *Lynchburg* decision.

In our Carolina opinion, we held that Southern Natural Gas Company's (Southern's) CDL-3 and AOL-3 rate schedules applicable to Carolina Pipeline Company (Carolina) do not unduly discriminate against Carolina, and accordingly, we dismissed Carolina's complaint against Southern. Thereafter, Carolina instituted judicial review proceedings with respect to our *Carolina* opinion in the Court of Appeals for the District of Columbia Circuit, designated *Carolina Pipeline Co.* v. *F.P.C.*, No. 18713. When the court subsequently handed down its *Lynchburg* decision, which appeared to involve questions decided in the *Carolina* opinion, we requested the court to remand the *Carolina* review proceeding to us so that we might determine whether the *Carolina* opinion satisfies the requirements of the *Lynchburg* decision.

In their filings made pursuant to our order reopening this case, the Commission's Staff, Carolina, and the Natural Gas Authorities of York, Lancaster and Chester, South Carolina, take the position that the *Carolina* opinion fails to satisfy the requirements of the *Lynchburg* decision, and Staff requests a further hearing to enable those requirements to be met.

Southern, Atlanta Gas Light Company, South Carolina Natural Gas Company, and Savannah Gas Company take the position that the *Lynchburg* decision does not govern the Carolina case because of the differences between the two cases, but that if it does, the *Carolina* opinion satisfies the requirement of the *Lynchburg* decision. Accordingly, they request that the *Carolina* opinion be affirmed without further hearing.

While it is by no means clear that the *Lynchburg* opinion should control this case, we believe a further hearing is warranted to determine on a factual basis whether the requirements of the *Lynchburg* case, as reasonably adapted, should be applied to the *Carolina* case.

Accordingly, we shall provide for a further hearing so that a supplemental record and findings responsive to the *Lynchburg* decision can be made, and the case decided on the basis thereof.

At the supplemental hearing provided for herein, the Examiner should, in the exercise of his judgment, afford the parties opportunity to present further evidence concerning the matters set forth in our order issued January 25, 1963, 29 FPC 149, providing for the original hearing in this case, and concerning such other matters arising subsequent to issuance of the *Carolina* opinion, including developments in Docket No. CP64–270, *et al.*, and RP64–31, involving proposed new service and rate changes on Southern's system, as may be relevant and material to the issues in this case; however, the Examiner shall not receive unduly duplicative or cumulative evidence.

For the purpose of expediting this proceeding, the Presiding Examiner shall hold a prehearing conference prior to the supplemental hearing, or any other conference he may find appropriate to convene, in conformity with the Commission's Rules of Practice and Procedure, and as further provided by this order. All matters which can be resolved without formal trial should be eliminated from hearing and stipulated to or settled.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the matters and issues described hereinabove be determined by public hearing and that the proceeding be expedited in accordance with the procedures set out below.

The Commission orders:

(A) Pursuant to the authority conferred upon the Federal Power Commission by the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a supplemental hearing shall be held concerning the matters involved and the issues presented in this proceeding, as described hereinabove.

(B) Without limitation upon the authority of the Presiding Examiner to convene prehearing conferences subsequent to the date herein fixed, pursuant to the provisions of Section 1.18 of the Commission's Rules of Practice and Procedure, a prehearing conference before the Presiding Examiner herein designated shall commence at 10:00 a.m. (EDST) on April 27, 1965, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., for the purpose of effectuating the intent of the Commission as hereinabove set out in the body of this order.

(C) At the hearing herein, Carolina shall have the burden of proof and the obligation of going forward first with the presentation of its direct case-in-chief.

(D) Carolina shall serve its prepared testimony and exhibits of its case-in-chief upon all parties, on or before March 22, 1965.

(E) Southern shall serve the prepared testimony and exhibits of its direct case upon all parties on or before April 19, 1965.

(F) The Commission staff and all other parties to this proceeding proposing to present evidence herein, shall serve the prepared testimony and exhibits of their direct cases on all parties on or before May 28, 1965.

(G) The Chief Examiner shall designate a hearing officer to preside at the prehearing conferences and the hearing in this matter (see delegation of authority, 27 F.R. 4276, etc.), pursuant to the Commission's Rules of Practice and Procedure, and as futher provided by this order.

(H) Notices and petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the Commission's Rules of Practice and Procedure, Sections 1.8 and 1.37(f) [18 CFR 1.8 and 1.37(f)] on or before March 15, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP65–216

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 23, 1965)

On January 14, 1965, Cities Service Gas Company (Applicant) filed in Docket No. CP65–216 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to The Gas Service Company (Gas Service) under Applicant's FPC Gas Rate Schedules F–2, C–2 and I–2 for resale in and about the City of Exeter, Missouri. The proposed sale to be made through Applicant's meter and regulator facilities, now in operation, all as more fully described in the application.

The estimated third year peak day and annual natural gas requirements for the proposed service to the City of Exeter are 160 Mcf and 15,435 Mcf at 14.73 psia, respectively.

Applicant states that Gas Service has been duly authorized by a franchise from the City of Exeter to construct and operate a distribution system therein and furthermore that the Public Service Commission of Missouri has authorized Gas Service to construct, operate and maintain facilities to connect its existing system with the proposed new distribution system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on February 18, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The sale and delivery of natural gas hereinbefore described, as more fully described in the application in this proceeding, are to be made in interstate commerce, subject to the jurisdiction of the Commission and are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sale and delivery of natural gas proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) and (e) of Section 157.20 of such Regulations.

(C) The sale and delivery hereby authorized shall commence, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

MISSOURI POWER & LIGHT COMPANY, DOCKET NO. CP65–170

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTIONS OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 23, 1965)

On December 14, 1964, Missouri Power & Light Company (Applicant) filed in Docket No. CP65–170 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle) to establish physical connection of its natural gas transmission system with Applicant's proposed distribution systems located at eleven points, in the central area of Missouri and to sell and deliver natural gas to Applicant for resale and distribution in fourteen communities in said area, all as more fully described in the application.

Applicant proposes to construct and operate distribution facilities in each of the following communities in Missouri: Prairie Home, Auxvasse, Center, Clark, Rocheport, Renick, Elston-St. Martins, Centertown, Russellville, Lohman, Cedar City, Holts Summit and New Bloomfield, all in the State of Missouri. The application states that in order to provide service to these communities, eight new connections with Panhandle are required. Separate connections are required for Prairie Home, Auxvasse, Center, Clark, Rocheport and Renick; one for Elston-St. Martins; and one for Centertown, Russellville and Lohman. Cedar City, Holts Summit and New Bloomfield will be served from an extension of the Jefferson City, Missouri distribution system of Applicant, which is presently supplied by Panhandle.

Applicant further states in the application that it has obtained the necessary franchises from all of the communities and villages to be served by it and that a certificate issued by the Public Service Commission of the State of Missouri authorizes the construction and operation of the additions to Applicant's system in that State.

The estimated volumes of natural gas necessary to meet the third year annual and maximum day requirements are estimated to be 254,698 Mcf and 2,762 Mcf respectively.

The total estimated cost of Applicant's proposed distribution systems and lateral transmission lines is $1,626,660, which will be financed with treasury cash and proceeds from unsecured short-term bank loans.

On January 6, 1965, Panhandle filed a statement with the Commission in response to the application herein saying that it does not object to the issuance of the order requested by the Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on January 7, 1965 (30 F.R. 176). No protest, petition to intervene or notice of intervention in opposition to the granting of the application has been filed.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant is a public utility company in the State of Missouri and is authorized to construct and operate the facilities proposed and to distribute and sell natural gas to inhabitants of the communities and villages and to customers along its pipeline system in the area.

(3) It is necessary and desirable in the public interest that Panhandle be directed to establish physical connections of its transportation facilities with the facilities proposed by Applicant and to sell and deliver to Applicant its daily and annual requirements of natural gas, as set forth in the application and as hereinafter ordered and conditioned.

(4) The requirement that Panhandle serve the Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and is hereby directed to establish physical connections of its natural gas transmission system with the facilities of the Applicant and to sell and deliver up to 2,762 Mcf of additional natural gas per day to Applicant, all as hereinbefore stated and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Panhandle within one year from the date of this order.

(C) Applicant shall execute a service agreement with Panhandle in accordance with the Commission's Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED FUEL GAS COMPANY, DOCKET NO. RP65-39

ORDER ACCEPTING REVISED TARIFF SHEETS FOR FILING AND APPROVING REFUNDS

(Issued February 23, 1965)*

United Fuel Gas Company (United) on January 22, 1965, tendered for filing certain revised tariff sheets to its FPC Gas Tariff, Fifth Revised Volume No. 1[1] The proposed change in rates[2] would make effective as of January 1, 1965, a reduction in United's jurisdictional rates of approximately $913,000, based upon sales for the twelve-months' period ended December 31, 1964.

---

*Reconsideration denied by order issued April 8, 1965, 33 FPC 713.

[1] First Revised Sheet No. 30, Sixth Revised Sheet Nos. 7, 27, and 33 and Seventh Revised Sheet No. 22.

[2] Appendix A hereto for proposed rate levels.

The proposed rate filing, which we have docketed as shown above, reflects a reduction in United's cost of service based upon the reduction in the Federal corporate income tax rate from 52 percent to 50 percent, as applicable to both United and to its affiliated gas supplier, Columbia Gulf Transmission Company (Columbia Gulf). United also proposed to make refunds to its jurisdictional customers in the total amount of $719,890,[3] which would reflect the same reduction in Federal income taxes as of March 1, 1964, through December 31, 1964. United will credit current billing to reflect the proposed reduction in bills previously rendered for service during the monthly periods commencing January 1, 1965.

United states that the proposed reduction is made pursuant to a letter of intent filed on February 24, 1964, by The Columbia Gas System, Inc., which informed the Commission that United would file the subject reduction following final determination of its rate levels in Docket No. G–20270, *et al.* On December 24, 1964, 32 FPC 1529, the Commission issued an order in those proceedings approving United's calculations of the prospective rate levels and refunds in accordance with Opinion Nos. 430, 31 FPC 1342 and 430–A, 32 FPC 1106.

The proposed filing is not intended to change or otherwise affect the existing obligations of United under the settlement agreement in Docket No. G–20270 or the Commission's orders therein.

United requests the waiver of its compliance with the requirements of the Commission's rules and regulations as may be necessary to permit the tendered tariff sheets to become effective as of January 1, 1965, as proposed. No protests or objections to United's proposed reduced rates have been received.

The Commission finds:

(1) Good cause exists for waiving the notice requirement of Part 154 of the Commission's Regulations under the Natural Gas Act, and for permitting the revised tariff sheets specified above to become effective as of January 1, 1965.

(2) The proposed revised tariff sheets and the rate reductions and refunds as proposed by United are proper and in the public interest in carrying out the provisions of the Natural Gas Act, and such tariff sheets should be accepted for filing to be effective and the proposed refunds should be approved, as hereinafter provided and ordered.

The Commission orders:

(A) The notice requirement of Part 154 of the Commission's Regulations under the Natural Gas Act is hereby waived and the revised tariff sheets specifically described hereinabove are accepted for filing to be effective as of January 1, 1965, and the refunds proposed by United as above described are hereby approved.

(B) This order shall not be construed to change or otherwise affect the existing obligations of United relating to refunds and rate reductions under orders heretofore issued by the Commission in proceedings involving United; and further, this order is without prejudice to any findings or orders which have been made or which may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, United, the Commission staff, or any other party affected by this order, in any proceedings now pending or hereafter instituted by or against United or any other persons or parties affected by this order.

---

[3] Exhibit No. 3 of United's filing sets forth the refunds to be paid to each jurisdictional customer.

APPENDIX A

UNITED FUEL GAS COMPANY
COMPARISON OF JURISDICTIONAL RATES

Rate schedules	Rates effective Oct. 1, 1964	Rates proposed to be effective Jan. 1, 1965

UTAH POWER & LIGHT COMPANY, DOCKET NO. E-7127

ORDER TERMINATING PROCEEDING IN DOCKET NO. E-7127 AND DIRECTING THE FILING OF RATE SCHEDULES

(Issued February 23, 1965)

This order terminates a rate proceeding previously initiated with respect to certain wholesale rates of the Utah Power & Light Company (Utah) and directs Utah to file its rate schedules for the wheeling of United States Bureau of Reclamation (Bureau) energy to Bureau pumping loads and to 28 preference customers (23 municipally owned, five cooperatives).

On September 30, 1963, 30 FPC 885, the Commission suspended a number of rate increase filings which had been made by Utah with respect to its service to 36 municipal, cooperative, and investor owned resale customers, and designated the proceeding for hearing to determine the lawfulness of such rates and charges pursuant to the provisions of Sections 205 and 206 of the Federal Power Act. Data subsequently secured as a result of a staff field investigation of Utah's rates and charges, in the light of the reduced present level of its wholesale sales, indicate that they do not result in an excessive return when tested in accordance with this Commission's established rate making principles. The results of the staff studies and investigation have been discussed with representatives of Utah's wholesale customers, as well as the Company itself. Though certain of Utah's wholesale customers individually and through an association of resale purchasers (Intermountain Consumer Power Association) had initially complained against Utah's rates, no customer has maintained this position subsequent to being advised of the results of the staff investigation and the Association, by letter of August 25, 1964, has advised the Commission that the customers represented no longer wish to pursue their objections. Under these circumstances, we are convinced that no further proceedings in Docket No. E-7127 are warranted.

During 1964, 25 of Utah's resale customers became customers of the Bureau and all but three of these ceased purchasing any power from Utah. Though informally requested to do so, Utah to date has not filed its rate schedules for such transmission or wheeling charges. It seems clear from the information in our possession that these operations by Utah involve transmission of electric energy in interstate commerce within the meaning of Section 201 of the Federal Power Act and that accordingly Utah is under an obligation pursuant to Section 205 of the Act to file its rate schedules for such service with this Commission. The energy transmitted by Utah to the Bureau's preferential customers in Utah and Idaho originates at least in part from sources outside of the State of Utah. The fact that Utah, a public utility within the meaning of Section 201 of the Federal Power Act is performing this paid transportation service for an agency of the federal government whose own operations are not subject to the jurisdiction of this Commission under the Federal Power Act is clearly beside the point. See *United States* v. *Public Utilities Commission of California*, 345 U.S. 295; *Hartford Electric Light Co.* v. *F.P.C.*, 131 F. 2d 953, 956–58, CA-2; *City of Colton* v. *Southern California Edison Co.*, 26 FPC 223, 228; *Aluminum Company of America, et al.*, 13 FPC 14, 21–22.

Accordingly, the Commission finds:

(1) It is necessary and appropriate for purposes of the Federal Power Act that the proceeding in Docket No. E–7127 be terminated.

(2) Utah, a public utility within the meaning of Section 201 of the Federal Power Act, is obligated to file with the Commission its rate schedules for transmitting or wheeling power to the Bureau's customers in Utah and Idaho.

The Commission orders:

(A) The proceeding in Docket No. E–7127, initiated by order of the Commission issued September 30, 1963, is hereby terminated.

(B) Utah is directed within 30 days from the date of this order to file with the Commission, in conformity with the provisions of our Rules of Practice and Procedure and Regulations under the Federal Power Act, all of its rate schedules for transmitting or wheeling electric energy or power to the Bureau's customers in Utah and Idaho.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COASTAL STATES GAS PRODUCING COMPANY AND TEX-STAR OIL & GAS CORPORATION, DOCKET NO. RI65–89

ORDER ACCEPTING OFFER OF SETTLEMENT, AND TERMINATING PROCEEDING

(Issued February 24, 1965)

On January 14, 1965, Coastal States Gas Producing Company (Coastal) submitted offers of settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, involving sales of natural gas to Trunkline Gas Company (Trunkline) under Coastal's FPC Gas Rate Schedules Nos. 1 and 3 in Hidalgo and Jim Wells Counties, Texas (Texas R. R. Co. District #4). Under the terms of the offers, Coastal proposes to eliminate the favored-nation and price redetermination provisions from the rate schedules, and to amend the periodic escalation provision thereof, and to establish a 14.6¢ per Mcf rate for the subject sales.[1] With its offers, Coastal filed notices of change in the rate schedules, and Trunkline's agreement thereto, to effectuate the terms of the proposals.[2] No protests or objections have been filed to the offers.

---

[1] The settlement rates include 0.25¢ per Mcf dehydration charge paid to Coastal by Trunkline.

Texas Oil and Gas Corp. (Texas Oil)[3] is one of several producers who sell Coastal a portion of the gas Coastal sells to Trunkline in Hidalgo County. Texas Oil is presently charging and collecting 10.096¢ per Mcf for gas sold to Coastal subject to refund pursuant to an order of the Commission issued on July 24, 1964 in Docket No. RI65–89. Texas Oil's proposed increase in rate was suspended because the price redetermination clause in Coastal's might have permitted Coastal to file a proposed increase rate above applicable area ceiling. Since, under the terms of the offer of settlement approved herein, the price redetermination clause will be eliminated from Coastal's contract with Trunkline, good cause exists to terminate the proceedings in Docket No. RI65–89 and to relieve Texas Oil of any refund obligation thereunder.

The proposed settlements are consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and their acceptance would serve the public interest.

However, we desire to make it clear that acceptance of Coastal's offers of settlement shall not be construed as approval of any future increased rate filed in accordance with its reservations of the right to file increases under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings including area rate or other similar proceedings, involving Coastal's rates and rate schedules.

The Commission finds:

The proposed settlement of each of the above-designated matters on the basis described herein, as more fully set forth in the offers of settlement filed with the Commission by Coastal on January 14, 1965, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offers of settlement filed with the Commission by Coastal January 14, 1965, are hereby approved in accordance with the provisions of this order.

(B) Supplement No. 11 to Rate Schedule No. 1, and Supplement No. 4 to Rate Schedule No. 3 filed by Coastal with the offers of settlement herein on January 14, 1965, are hereby accepted for filing, and the rates and charges of 14.6¢ per Mcf at 14.65 psia, specified in said offers shall be effective as of the date of issuance of this order.

(C) The proceeding in Docket No. RI65–89 is hereby terminated and the refund obligation imposed upon Texas Oil by order issued July 24, 1964, in that proceeding is hereby discharged.

(D) The acceptance by the Commission of Coastal's offers of settlement and the termination of Docket No. RI65–89 are without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Coastal or Texas Oil, including area or other similar proceedings.

---

[2] The notices of change are designated as Supplement Nos. 11 and 4 to Coastal's FPC Gas Rate Schedules Nos. 1 and 3. An amendatory agreement effectuating the terms of the proposal is included in each notice.

[3] Formerly Tex-Star Oil & Gas Corporation.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE, DOCKET NO. E-7152

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued February 24, 1965)

Public Service Company of New Hampshire (Public Service), incorporated under the laws of the State of New Hampshire and qualified to do business in that State and the States of Maine and Vermont, with its principal business office in Manchester, New Hampshire, filed an application on February 26, 1964, as supplemented, seeking authority to acquire, merge and consolidate with its facilities, all of the facilities of Swans Falls Company, created by a Declaration of Trust under the laws of the State of Maine and doing business in that State with its principal business office in Manchester, New Hampshire.

Public Service, with its subsidiaries, New Hampshire Electric Company, Kittery Electric Light Company, and Swans Falls Company, owns and operates a single integrated system engaged in the generation, purchase and transmission of electricity and its sale to the public in ten cities and one hundred eighty other communities in New Hampshire, to nine communities in the State of Maine and six communities in the State of Vermont, and the sale at wholesale to ten other electric utilities. Service to the public in New Hampshire is carried on in the Counties of Belknap, Carroll, Cheshire, Coos, Grafton, Hillsborough, Merrimack, Rockingham, Strafford and Sullivan; in Maine in the Counties of Oxford and York; and in Vermont in the County of Essex.

Swans Falls is a common law trust. Its entire assets consist of a hydroelectric development on the Saco River in Fryeburg, Maine, having a nameplate rating of 640 kw, cash and other current assets. It is solely engaged in the generation of electrical energy and the sale thereof at actual cost at Fryeburg, Maine, to Public Service.

According to the application, Public Service proposes to surrender to Swans Falls for cancellation all of the outstanding shares of beneficial interest of Swans Falls and to assume all of Swans Falls' debts and obligations in exchange for the transfer to Public Service of all the assets of Swans Falls. Swans Falls proposes to transfer to Public Service all of its operating facilities which consist of a hydroelectric plant having a nameplate capacity of 640 kw. The entire output of this plant, which has averaged less than 2,500,000 kwh per year over the last ten years, is sold and delivered at cost to Public Service. The proposed use of the output of such plant after transfer to Public Service will be identical with the present use.

The facilities proposed to be transferred are to be transferred at original cost. On the books of Public Service, its investment in Swans Falls is recorded at $150,000 and Swans Falls has net assets of $150,000. According to the application, the hydroelectric facilities to be transferred may be retired from service within the next decade because of economic obsolescence. The application indicates that some tax benefits will accrue to Public Service if the plant is owned directly by Public Service at the time of its retirement. The application states that heretofore Swans Falls has sold its entire output to Public Service at cost and therefore, there will be no increase in the cost of power generated due to the consolidation of assets. The application also notes that in terminating the existence of Swans Falls the corporate structure of the Public Service system, and its operations, will be simplified.

Public Service has also requested that the hydroelectric facilities to be transferred be licensed by the Federal Power Commission. By order issued concurrently herewith, entitled Project No. 2481, we approve issuance of a license for that project.

Written notice of the application has been given to the Public Utilities Commission of Maine, the Public Utilities Commission of New Hampshire, and the Public Service Board of Vermont. Notice was also published in the Federal Register on March 11, 1964 (29 F.R. 3251), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before March 23, 1964, file petitions or protests with the Federal Power Commission, Washington, D.C., 20426. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, Public Service, is the owner of facilities used for the transmission of electric energy generated outside the State in which it is consumed, which facilities are in addition to, and do not include facilities used for the generation of electric energy or facilities used in local distribution or only for the transmission of electric energy consumed wholly by the transmitter. Public Service is therefore, a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) By the proposed transaction, as described above, Public Service will acquire and merge or consolidate with its facilities subject to the jurisdiction of the Commission, all of the facilities of Swans Falls, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of Swans Falls' facilities by Public Service will be consistent with the public interest, as expressed in Section 203 of the Act, for the reasons set forth in the recital above.

(4) The period of public notice herein is reasonable.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the facilities of Swans Falls by Public Service, all as described above, is hereby authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) Public Service shall record the transaction herein authorized and the facilities and properties referred to above, as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of the Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE, PROJECT NO. 2481

ORDER ISSUING LICENSE (MINOR)

(Issued February 24, 1965)*

Application was filed on July 2, 1964, by Public Service Company of New Hampshire (Applicant) for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2481, known as the Swans Falls Hydroelectric Plant, located on the Saco River, in the Town of Fryeburg, Oxford County, Maine, and the Town of Conway, Carroll County, New Hampshire. No lands of the United States are affected by the project.

According to the application, the first of the three sections of the project dam, which section is of timber crib, was completed in 1918; the second reinforced concrete spillway section at the south end of the timber crib section was completed in 1924; and the third section, a concrete spillway on the north end of the timber crib section was constructed in 1936. The intake canal was modified in 1936 also.

The Secretary of the Army and the Chief of Engineers have advised that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions for the conservation and protection of fishery and wildlife resources.

The Department of Health, Education, and Welfare has advised that the project does not presently have any adverse effects on water supply, water pollution control, or vector control, and none is anticipated.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al., supra*, p. 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

In its Findings and Order issued July 5, 1955, in Docket No. E-6610 (14 FPC 839), the Commission found that the Saco River from its mouth upstream at least to Conway, New Hampshire, is a navigable water of the United States. The Swans Falls Hydroelectric Plant is located within this reach of the Saco River.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of January 1, 1938 and a termination date of December 31, 1988.

The Commission finds:

(1) The project affects navigable waters of the United States.

---

*Rehearing granted by order issued April 23, 1965. License modified by order of May 5, 1965, 33 FPC 885, 963.

(2) Applicant is a corporation organized under the laws of the State of New Hampshire, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 840 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Public Service Company of New Hampshire (Licensee), of Manchester, New Hampshire, under Sections 4(e) and 10(i) of the Federal Power Act (Act), for a period effective as of January 1, 1938 and terminating December 31, 1988, for the continued operation and maintenance of the Swans Falls Project No. 2481, located on the Saco River, a navigable water of the United States, in Oxford County, Maine, and Carroll County, New Hampshire subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Swans Falls Project No. 2481 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) (1) a dam with timber crib section of 246 feet long, a reinforced spillway section 85 feet long, and a concrete spillway section 105 feet long; (2) the intake canal with 2–7 foot by 12 foot wooden waste gates; (3) a concrete and brick powerhouse containing two 475 horsepower turbines, each connected to a 400 kva Westinghouse generator, the total installed capacity of the units being 640 kw.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests, the possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto, and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 12. For the purpose of reimbursing the United States for the costs of Administration of Part I of the Act the Licensee shall pay to the United States the following annual charges:

(i) From the effective date of the license, January 1, 1938, through March 31, 1962, $5.00 per annum; and

(ii) From April 1, 1962, $42.00 per annum.

Article 13. The Licensee shall, within one year from the date of this license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 14. The Licensee shall, for the conservation, and development of fish resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such fish passage facilities and comply with such reasonable modifications of the project structures and operations as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

(D) The terms and conditions of the Act which it has been found above to be in the public interest to waive, are hereby eliminated from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

FINCH, PRUYN & COMPANY, INCORPORATED, PROJECT NO. 2385

ORDER ISSUING LICENSE (MAJOR)*

(Issued February 25, 1965)

Application was filed on July 10, 1963, and supplemented on July 18, 1963 and April 3, 1964, by Finch, Pruyn & Company, Incorporated (Applicant) of Glens Falls, New York, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2385, known as the Finch, Pruyn Hydroelectric Project, located on the Hudson River, a navigable waterway of the United States,[1] in Warren County, New York, in the vicinity of the City of Glens Falls. No lands of the United States are affected by the project.

---

*Rehearing granted by order issued April 16, 1965 [unreported].

Power has been developed continuously at this site since sometime prior to 1845. In 1865 Jeremiah Finch, Samuel Pruyn and three other individuals acquired ownership to one-half of the dam between Glens Falls and South Glens Falls and related water rights and generating facilities, and in 1904 formed the corporation as it is presently known, Finch, Pruyn & Company, Incorporated. In 1914 and 1915 Applicant and Niagara Mohawk Power Company,[2] owner of the other half of the dam, rebuilt the wooden dam as a concrete structure, and in 1923 and 1924 raised the top of the dam to its present elevation. The powerhouse originally provided for six generating units but was modified by the removal of one unit and sealing the intake. At present there are four generating units, the last of which was installed subsequent to the filing of the subject application for license, but which was included in the application by the aforementioned April 3, 1964 supplement.

The Secretary of the Army and the Chief of Engineers have approved the plans of the project structures affecting navigation pursuant to the provisions of Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, has advised that the project has no significant effect on fish and wildlife or on the recreational resources, and that no special conditions in the interest of these resources are necessary for inclusion in any license for the project.

The Department of Health, Education, and Welfare has advised that the project has no adverse effects on water supply or water quality control and that none is expected.

While Applicant filed as part of its application an Exhibit R, it has not filed a recreational use plan appropriate for approval. By Article 31 herein we are requiring Applicant to cooperate with Federal, State and local agencies in the interest of recreation in connection with the use of project lands and waters by the public and to keep us advised at stated intervals with respect to the results.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1949 and a termination date of December 31, 1993.

The Commission finds:

(1) The project is located upon a navigable waterway of the United States.

(2) Applicant is a corporation organized under the laws of the State of New York, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

---

[1] Docket No. DI-177, New York Power and Light Corp., Order issued April 18, 1949 (8 FPC 231-250).

[2] Application for license for Niagara's half of the dam is pending and has been designated as Project No. 2482.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 13,100 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to Finch, Pruyn & Company, Incorporated, under Section 4(e) of the Federal Power Act (Act), for a period effective as of April 1, 1949 and terminating December 31, 1993, for the continued operation and maintenance of the Finch, Pruyn Hydroelectric Project No. 2385, located on the Hudson River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2385 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by the following exhibits which formed a part of the application for license.

Exhibit J: Sheet 1 (FPC No. 2385–1) General Map of Project Area;

Exhibit K: Sheet 1 (FPC No. 2385–2) Detail Map of Project Area.

(ii) project works consisting of: (1) that section of a reinforced concrete dam across the Hudson River between the City of Glens Falls and the Village of South Glens Falls owned by the Licensee and situated within Warren County (368.5 feet), which section contains 5 feet of flashboards, a head gate structure about 96 feet long with 8 hand operated gates controlling the flow of the river to the forebay; (2) a powerhouse forebay canal averaging 80 feet in width formed by the natural river bank on the left, and having a concrete floor slab and reinforced concrete overflow wall 550 feet long (with a crest elevation at 266.16 feet Barge Canal Datum) topped by flashboards about 5 feet in height; (3) a powerhouse 136 feet long containing four operating units consisting of four turbines rated at 3,240 hp, 2,600 hp, 2,600 hp, and 3,400 hp, at a head of 42 feet, directly connected to generators rated at 2,500 kw, 2,000 kw, 2,500 kw, and 2,840 kw, respectively; and (4) appurtenant electrical and mechanical facilities: the location and character of which are more fully shown and described by the exhibits hereinbefore cited and by other exhibits which are designated and described as follows:

Exhibit L: Sheet 1 (FPC No. 2385–5) Amended General Plan of Project Structures; and

Exhibit M: Two typewritten pages, "Amended Mechanical, Electrical and Transmission Equipment", filed in the Commission April 3, 1964, as a supplement to the original filing of July 10, 1963.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964) entitled, "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States" (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached and made a part hereof, except Article 25 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective April 1, 1949:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with provisions of its regulations, in effect from time to time. The authorized installed capacity for such purposes is 13,100 horsepower.

Article 31. Licensee shall cooperate with Federal, State and local agencies in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project. At the end of six (6) years from the date of issuance of this license and every sixth year thereafter, Licensee shall advise the Commission by letter of the results of cooperation with such agencies and of further recreation development at the project.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NIAGARA MOHAWK POWER CORPORATION, PROJECT NO. 2330

ORDER AMENDING LICENSE (MAJOR)

(Issued February 25, 1965)

Application was filed on November 12, 1964, under Section 6 of the Federal Power Act (Act) by Niagara Mohawk Power Corporation (Applicant) of Syracuse, New York, for amendment of its license for constructed Project No. 2330, known as the Raquette River Project, located on the Raquette River in St. Lawrence County, New York.

The amendment sought would authorize the construction of a new concrete gravity dam to replace the existing timber crib dam at the Norfolk development of the Raquette River Project. The new dam, estimated to cost $350,000 will be approximately 380 feet long and 22 feet high surmounted by flashboards 0.8 foot high. The elevation at the crest of the new dam and of the reservoir's normal water surface will remain the same as that of the existing timber crib dam, namely, elevations 254.1 feet and 254.9 feet, respectively.

The new dam is necessary because the condition of the existing dam is such that leakage is excessive and considerable maintenance is required. Applicant has advised that the condition of the existing dam is such that it will have to be retired in 1965 because it will have reached the end of its useful life. Applicant plans to begin construction in May or June of 1965 and to complete construction in November, 1965.

The Norfolk development has an installed capacity of 4500 kilowatts and a dependable capacity estimated by Applicant at 4000 kilowatts. With the construction of the new dam and consequent elimination of leakage, Applicant estimates that the average annual energy output will increase from 25,660,000 kwh to 28,420,000 kwh.

A Commission staff study of the design of the new dam shows that the structure is adequately designed and would result in a safe and adequate structure if constructed in accordance with accepted engineering practices. The staff also has determined that the replacement of the existing timber crib dam with a new concrete dam is economically feasible.

The Department of the Army has advised that the plans of the project structures affecting navigation are satisfactory.

The Commission finds:

(1) Public notice of the application has been given. No protests or petitions to intervene have been received.

(2) The following described exhibit filed as part of the application conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit L, Sheet 3 (FPC No. 2330–8), now part of the license and which has been superseded, should be eliminated from the license:

Exhibit L	FPC No.	Showing
Sheet 3A	2330–10	Existing Norfolk Development Plan, and Sections Dam, Intake, Surge Tank and Power house.

The Commission orders:

(A) The license for Project No. 2330 is hereby amended, effective as of February 1, 1965, to authorize the construction of a new concrete gravity dam to replace the existing timber crib dam at the Norfolk development and paragraph (B), (ii), 3 of the license is hereby revised to read as follows:

> 3. The Norfolk development consisting of a concrete gravity dam 22 feet high and 380 feet long, a ten acre reservoir, an open flume, a wood stave pipeline, a steel penstock with surge tank and a concrete powerhouse containing a 4500 kw unit.

(B) The license is also amended to include the following additional article:

> *Article 33.* The Licensee shall commence construction of the Norfolk concrete gravity dam within one year of the effective date of this order, shall thereafter in good faith and with due diligence prosecute such construction,

and shall complete construction of the Norfolk dam within two years from effective date of this order.

(C) The exhibit described in finding (2) above as conforming to the Commission's rules and regulations is hereby approved as part of the license for Project No. 2330, and the exhibit described in the same finding as being superseded is hereby eliminated from the license for the project.

(D) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE ATLANTIC REFINING COMPANY, DOCKET NO. G-17741

ORDER GRANTING APPLICATION FOR REHEARING AND AMENDING ORDER

(Issued February 26, 1965)

On December 31, 1964, 32 FPC 1554, we issued an order approving a settlement proposal filed in the above proceeding on November 24, 1964, by the Atlantic Refining Company (Atlantic). We previously approved a general rate settlement proposal made by Atlantic in which it had reduced the rate for the sales of natural gas involved in this proceeding from 23.55¢ per Mcf to 17.5¢, but excluded the matters relating to Atlantic's refund obligations. Those matters were the subject of the proposal filed by Atlantic on November 24, 1964.

On January 29, 1965, Atlantic filed its application for rehearing of the order of December 31, 1964, stating that its proposal provided for the termination of its obligation to pay interest on refund amounts on August 1, 1964, rather than the November 1, 1964 date specified in Ordering Paragraph (B) of the order of December 31, 1964. We interpreted Atlantic's proposal as an offer to refund all amounts collected above 17.5¢ for the period April 1, 1961 to August 1, 1964, with simple interest computed on such refund amounts at the rate specified in our orders herein but without a terminal date for payment of such interest. Accordingly, our order of December 31, 1964, accepted the settlement proposal and provided for payment of interest until the first of the month in which the settlement proposal was filed.

However, Atlantic states in its application that its proposal was made with the specific intention that the interest paid on the monies to be refunded should terminate on August 1, 1964, the date when the reduced rate which had previously been approved by us had been placed in effect. Further, Atlantic states that this was the intent of the many interested parties to the settlement, and notes no exception or comment was made by any party to any aspect of the proposal as filed.

In view of the fact that the general rate settlement proposal and the current settlement proposal are interrelated products of months of negotiation, although separately filed, we find that good cause exists to grant Atlantic's application for rehearing and amendment of the order issued herein on December 31, 1964.

The Commission orders:

(A) The application for rehearing filed herein by Atlantic on January 29, 1965, is granted.

(B) The first sentence of Ordering Paragraph (B) of the order issued herein on December 31, 1964, is hereby amended by substituting the word "August" for the word "November".

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

CENTRAL NATURAL GAS CO., DOCKET NO. CP65-134

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 26, 1965)

On November 10, 1964, Central Natural Gas Co. (Applicant), 201 E. Main Street, Vermillion, South Dakota, filed in Docket No. CP65-134 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Northern Natural Gas Company (Northern) to establish physical connection of its natural gas transmission facilities with the distribution facilities proposed to be constructed by Applicant, and to deliver natural gas to Applicant for distribution and resale to the Sioux Alfalfa Meal Company (Sioux) and the unincorporated Village of Meckling and environs, Clay County, South Dakota (Meckling), all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate a distribution system in Meckling, as well as 2.5 miles of 4-inch lateral line.

Deliveries to Central for redelivery to Sioux are on an interruptible basis and deliveries for distribution in Meckling are on a firm basis.

The estimated initial three year period of annual and peak day requirements are estimated to be:

	1st year	2d year	3d year
Annual (Mcf)	116,662	116,662	228,907
Firm	42	42	42

The estimated total cost to Applicant for construction is $70,124, and will be financed from current funds.

On December 16, 1964, Northern filed an answer to the application stating it does not object to rendering the service requested.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on December 3, 1964 (29 F.R. 16226). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 167).

(2) Applicant, Central Natural Gas Company, a Delaware corporation having its principal place of business in Vermillion, South Dakota, is a corporation

legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Northern to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant the volumes of gas hereinbefore described.

(4) The requirement that Northern serve Applicant, as hereinbefore ordered, will not (a) place an undue burden upon Northern, (b) require Northern to enlarge its transportation facilities, or (c) impair Northern's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Northern for distribution in Meckling and environs, South Dakota, within one year from the date of the issuance of this order.

The Commission orders:

(A) Northern be and is hereby directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Central Natural Gas Company as herein described, and to sell and deliver up to 42 Mcf per day of firm gas, third year peak day requirements, to Applicant for distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Northern's presently filed appropriate rate schedule.

(B) Northern shall report to the Commission, in writing the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

FLORIDA POWER & LIGHT COMPANY, DOCKET NO. E-7210

ORDER INITIATING INVESTIGATION AND HEARING

(Issued February 26, 1965)

By this order we initiate an investigation of the Florida Power & Light Company to determine whether that company is a public utility subject to regulation under the Federal Power Act.

Florida Power & Light Company (FP&L) is a corporation engaged in the generation, transmission and sale at wholesale and retail of electric energy. It is organized under the laws of the State of Florida and maintains its principal business office in Miami, Florida. By letter of October 3, 1963, the staff of this Commission, having concluded from information before it that FP&L was a public utility within the meaning of Section 201 of the Federal Power Act, requested FP&L to make appropriate filings. In response thereto at a conference on February 14, 1964, and by letter dated April 7, 1964, FP&L denied that it is a "public utility" within the meaning of the Federal Power Act. Subsequent conferences between the Commission staff and representatives of FP&L have failed to resolve the questions of fact necessary for a Commission determination of its status.

From information presently available in the files of the Commission, it appears that FP&L owns and operates an electric generating and transmission system in the state of Florida which is interconnected[1] with electric generating and transmission systems owned and operated by Florida Power Corporation, Tampa Electric Company, City of Jacksonville, Florida, and Orlando Utilities Commission. Some or all of these systems operate as the Florida Power Pool, which is electrically interconnected with the Georgia Power Company, Gulf Power Company, Alabama Power Company and Mississippi Power Company, which make up the Southern Pool. Considerable exchanges of power between members of the two pools are taking place in interstate commerce on an increasing scale. It appears that FP&L participates in these exchanges and as a result may be a public utility within the meaning of the Federal Power Act. Since, however, FP&L denies that this is the case, an investigation to determine the facts upon a hearing record is necessary and appropriate.

The Commission finds:

In view of the foregoing circumstances, it is necessary and appropriate for the purposes of carrying out the provisions of the Federal Power Act, and particularly, but not in limitation of the foregoing, sections 201, 208, 301, 307, 308 and 309 (16 U.S.C. §§ 824, 824g, 825, 825f–h) that an investigation and hearing be initiated to determine whether FP&L is a "public utility" within the meaning of, and subject to the requirements of the Federal Power Act.

The Commission orders:

(A) At a time and place and before a hearing examiner to be specified, a public hearing shall be held to find and determine:

(1) Whether FP&L is a "public utility" within the meaning of Section 201 of the Federal Power Act and required to maintain its accounts in accordance with the Commission's Uniform System of Accounts for Public Utilities and Licensees, Part 101 of the Commission's Regulations thereunder;

(2) Whether FP&L maintains its accounts as required by the Commission's Uniform System of Accounts for Public Utilities and Licensees. and if not, what action should be taken by the Commission to insure compliance therewith;

(3) Whether other orders or other actions may be necessary and appropriate to bring about compliance with the Federal Power Act and the Commission's Regulations thereunder.

(B) A prehearing conference shall be held before a presiding examiner commencing at 10 a.m. (EST), April 12, 1965, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C. 20426, for purposes as specified in the Commission's Rules of Practice and Procedure.

(C) In order that the foregoing issues may be properly determined, an investigation is hereby initiated and FP&L is hereby directed pursuant to the provisions of Sections 301(b), 307 and 309 of the Federal Power Act to grant to authorized members of the staff of the Federal Power Commission during regular business hours, free access of its property and access to and the right to inspect and examine all of its accounts, records and memoranda including, but not limited to, the following: books, papers, correspondence, contracts, agreements, maps, reports of engineers, meter readings, and log sheets upon their request; and shall either furnish copies of such material at the request of the staff, or make such material available for reproduction by the staff or shall produce such material for use by the staff prior to and during said hearing at the Offices of the Commission, 441 G Street, N.W., Washington, D.C. 20426.

---

[1] Information obtained from FP&L's annual reports indicate that these interconnections are being strengthened by new transmission facilities presently under construction.

(D) Notices of intervention or petitions to intervene in this proceeding may be filed with the Federal Power Commission, Washington, D.C. 20426, on or before March 23, 1965, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.37).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64–96

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 26, 1965)

On April 17, 1964, 31 FPC 957, the Commission issued a certificate of public convenience and necessity in Docket No. CP64–96, to Transcontinental Gas Pipe Line Corporation (Applicant) authorizing the construction and operation of an additional delivery point and other facilities by the Applicant to enable it to better serve Philadelphia Electric Company, an existing customer, with natural gas. The proposed facilities were to be located near the City of Coatesville, Chester County, Pennsylvania, and were to be placed in operation within nine months from the date of the order.

Applicant states that due to intervening circumstances since the date of the said order it has, by letter dated December 15, 1964, been advised by Philadelphia Electric Company that gas deliveries at the place just mentioned will not be required by it until on or about November 1, 1965.

Applicant requests that the time fixed by paragraph (c) of the order issued on April 17, 1964, be changed and extended until November 1, 1965.

The Commission orders:

(A) The date provided for in paragraph (c) of the Commission's order of April 17, 1964, be and the same is hereby changed to November 1, 1965.

(B) In all other respects the order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP65-86; PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP65-110

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 1, 1965)

On September 30, 1964, Michigan Gas Storage Company (Michigan), filed in Docket No. CP65-86 an application as supplemented on December 2, 1964, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities, all as more fully set forth in the application.

Michigan proposes to construct and operate (1) approximately 31 miles of 26-inch pipeline, extending from a point of connection with Michigan's Main Line in Gratiot County, Michigan, to a proposed point of interchange (to be known as Saginaw Junction) with the so-called "North Line" of Panhandle Eastern Pipe Line Company (Panhandle) in Saginaw County, Michigan; and (2) a new interchange or delivery point with Panhandle at the eastern end of the proposed 26-inch pipeline, at Saginaw Junction.

On October 26, 1964, Panhandle filed in Docket No. CP65-110 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities, all as more fully set forth in the application.

Panhandle proposes to construct and operate a new interchange with Michigan, which is to be located on Panhandle's North Line, in Saginaw County, Michigan. The application states that the purpose of this interchange is to provide flexibility on Michigan's system.

Michigan's application, as supplemented, states that the proposed facilities are required in order to increase the peak-day deliverability of Michigan's facilities to Consumers Power Company (Consumers) for the Saginaw-Bay City area. Consumers' peak-day capability in the area at present is approximately 171,400; the proposed facilities will enable Consumers to meet anticipated peak-day requirements of approximately 186,000 Mcf during the 1965-1966 heating season, and anticipated peak-day requirements of 284,000 Mcf by 1969-70.

The estimated cost of Michigan's proposed construction is $2,995,000, and will be financed with internally generated funds.

The estimated cost of Panhandle's proposed construction is $6,600, and will be financed with funds on hand.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the applications has been filed.

At a hearing held on February 25, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications, as supplemented, and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Michigan Gas Storage Company, a Michigan corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 3, 1946, in Docket No. G–731 (5 FPC 965).

(2) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(3) The proposed construction and operation of facilities, as hereinbefore described and as more fully described in the applications, as supplemented, and exhibits in these proceedings, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid construction and operation of facilities are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Michigan and Panhandle are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon the Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are issued to Panhandle and Michigan, authorizing the construction and operation of facilities as more fully described in the applications in these proceedings, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Michigan's and Panhandle's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLANDIN POWER COMPANY, PROJECT NO. 2361

ORDER ISSUING LICENSE (MINOR)

(Issued March 2, 1965)

Application was filed on April 25, 1963 and supplemented on May 24, and June 12 and October 24, 1963, by Blandin Power Company (Applicant) of Grand Rapids, Minnesota, for a license under Section 4(e) of the Federal Power Act

(Act) for constructed minor Project No. 2361 known as the Prairie River Hydro-Electric Project, in the vicinity of Grand Rapids in Itasca County, Minnesota.

The project was originally constructed around 1920. Modifications to the structures were made in 1934, and no major construction or replacement of equipment was accomplished thereafter. No lands of the United States are affected by the project.

Project No. 2361 is located at mile 6.3 on the Prairie River. According to available records, extensive logging activities occurred on the Prairie River commencing about 1872. Such activities were conducted from points upstream from the project to points downstream to the junction of the Prairie with the Mississippi River.

The Secretary of the Army and the Corps of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions for the conservation and development of fish and wildlife resources.

The Department of Health, Education, and Welfare has advised that no objectionable pollution conditions attributable to the project have been created or intensified in the past; there is no known discharge of sewage; and the granting of a license for the project is not expected to create or intensify mosquito problems.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) The Prairie River is a navigable waterway of the United States from its mouth to points upstream at least past Project No. 2361.

(2) Applicant is a corporation organized under the laws of the State of Minnesota, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protest or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for

the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,445 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

> Section 4(b), except the second sentence thereof; 4(e) insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a) insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Blandin Power Company (Licensee) under Sections 4(e) and 10(i) of the Act, for a period effective as of April 1, 1962 and terminating on December 31, 1993, for the continued operation and maintenance of Project No. 2361, located on the Prairie River, a navigable waterway of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2361 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) a concrete gravity dam 17 feet high and 946 feet long incorporating a spillway section with tainter gates and two stoplog controlled sluices; and an emergency spillway 269 feet long. The entrance to the forebay is through a canal across which a trash rack is extended. The headworks at the entrance to the flow line consist of a trash rack and manually operated radial gate. A conduit 450 feet long and 10 feet in diameter consisting of reinforced concrete pipe and surge tank leads to a powerhouse constructed of concrete and masonry which contains two Leffel vertical water turbine units rated 1,000 horsepower and 550 horsepower connected to two generators of 700 kw and 384 kw, respectively; and a transformer bank 2.3/23 kv.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests, the possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Article 1 through 11, are attached hereto, and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 12. The Licensee shall pay to the United States the following annual charge; effective as of April 1, 1962.

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $72.00.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GEO. A. WHITING PAPER COMPANY, PROJECT NO. 2352

ORDER ISSUING LICENSE (MINOR)

(Issued March 2, 1965)

Application was filed on March 8, 1963, by Geo. A. Whiting Paper Company (Applicant) of Menasha, Wisconsin, for a license under Section 4(e) of the Federal Power Act (Act) for constructed minor Project No. 2352, known as the Menasha Development, located on the Fox River, in the City of Menasha, in Winnebago County, Wisconsin. No lands of the United States are affected by the project.

While the application does not state when the project was constructed, available Commission records show that the project was in existence prior to 1938. Applicant's principal project works consist of generating units (250 hp) and a short canal section (but no dam or reservoir) situated between the Corps of Engineers' Menasha Navigation Canal and the Fox River and takes water from the canal and discharges it into the Fox River. This is in the reach of the river known as the Lower Fox River. In its order dated November 30, 1938,[1] in Docket No. DI-146, City of Kaukauna, Wisconsin, the Commission found, among other things, that the Lower Fox River is a navigable water of the United States.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interest of fish and wildlife usually included in licenses for the type of project herein under consideration.

The Department of Health, Education and Welfare has advised that it did not foresee any adverse effects of the project on matters within its responsibility.

The Wisconsin Conservation Department has advised that the project affects navigation, recreation and fish and wildlife interests on the entire Winnebago Pool consisting of Lakes Winnebago, Gutte des Morts and Poygen, as well as the Fox River to the Eureka Lock and the Wolf River nearly to New London.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project

---

[1] Unreported.

The Secretary of the Army and the Corps of Engineers have reported that the plan of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned, and recommended for inclusion in any license for the project, certain conditions in the interest of navigation, including a condition that the Riverview Project will not be operated in a manner which would adversely affect accomplishment of the authorized functions of the Corps' upstream multi-purpose West Point project, and (2) a condition that would relieve the United States of the responsibility to compensate Applicant for any damage resulting from construction and operation of the West Point project.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, certain conditions in the interest of fish and wildlife and in the interest of providing free access to the public, and a provision for Applicant's participation in the maintenance of the gaging station at Bartlett's Ferry. With respect to the latter, such participation is required in Applicant's license for Project No. 485.

Although invited to do so, no reports have been received from the Department of Health, Education, and Welfare, the Game and Fish Department, State of Georgia, and the Alabama Division of Game, Fish and Seafoods.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of March 1, 1959, and a termination date of December 31, 1993.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Georgia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not utilize surplus water or water power from a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative

annual charge is 640 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

> Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Georgia Power Company (Licensee) of Atlanta, Georgia, under Sections 4(e) and 10(i) of the Act, for a period effective as of March 1, 1959, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2350, located on the Chattahoochee River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2350 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined;

(ii) A stone masonry diversion dam, 15 feet high and 994 feet long, with a free-flow ogee shape crest (el. 532.3 feet), constructed in 1920; a lower stone masonry dam, 200 feet long with a free-flow crest spillway (el. 530.5 feet), and 200 feet of abutments, constructed in 1906; a concrete and brick powerhouse located at the western end of the lower dam, containing two Leffel type turbines connected to two General Electric generators of 240 kw each, which commenced generation in 1918; and

(iii) All other structures, fixtures, equipment, or facilities which are located in the project area and are used or useful in the maintenance and operation of the project; all rights and interests the possession of which are necessary or appropriate to the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act for the period March 1, 1959 through March 31, 1962, an annual charge of $5.00, and effective April 1, 1962, an annual charge of $32.00.

Article 13. Whenever the United States shall desire to construct, complete, or improve navigation facilities in connection with the project, the Licensee shall convey to the United States, free of costs, such of its land and its rights-of-way and such right of passage through its dams or other structures, and permit such control of pools as may be required to complete and maintain such navigation facilities.

Article 14. The Licensee shall furnish, free of cost to the United States, power for the operation and maintenance of navigation facilities at the voltage and frequency required by such facilities and at a point adjacent thereto whether said facilities are constructed by the Licensee or by the United States.

Article 15. The operation of any navigation facilities which may be constructed as a part of or in connection with any dam or diversion structure constituting a part of the project works shall at all times be controlled by such reasonable rules and regulations in the interest of navigation, including the control of the level of the pool caused by such dam or diversion structure, as may be made from time to time by the Secretary of the Army.

Article 16. The Licensee shall for the protection of navigation, construct, maintain and operate at its own expense such lights and other signals on fixed structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 17. The Riverview Project No. 2350 shall not be operated in a manner which will adversely affect accomplishment of any authorized function of the West Point Project as determined by the Chief of Engineers, Department of the Army, or his authorized representative.

Article 18. The United States shall not be liable for damages to the licensee resulting from the construction and/or operation of the West Point Project.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NORTHERN VIRGINIA POWER COMPANY, PROJECT NO. 2391

ORDER ISSUING LICENSE (MINOR)

(Issued March 2, 1965)

Application was filed on August 7, 1963 by Northern Virginia Power Company (Applicant) of Winchester, Virginia, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2391, known as the Warren Hydro Station, located on the Shenandoah River, in Warren County, Virginia, near the Town of Front Royal.

According to the application, the project was constructed and placed in operation in 1924 and has been in service since that date with no substantial changes. No lands of the United States are affected by the project.

The Department of the Army and the Chief of Engineers have advised that the project structures affecting navigation are considered satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project the terms and conditions in the interests of fish and wildlife and recreation usually included in licenses for projects of the type herein under consideration.

The Department of Health, Education, and Welfare, has advised that the project does not affect significantly water supply or water control quality, nor is it expected that the granting of a license for the project will create or intensify vector problems.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

In our order issued August 11, 1964[1] we found that the Shenandoah River is navigable from its confluence with the Potomac River (Harpers Ferry) to points upstream from the Millville Hydro Station located at about river mile 6.5. There is ample evidence of historical navigation on the Shenandoah River and its South Fork as far upstream as Port Republic, at river mile 156. This portion of the river was improved for navigation as early as 1807. Flat boats operated from Port Republic down to Harpers Ferry and thence via the Chesapeake and Ohio Canal to Washington, D.C. Project No. 2391 is located on the Shenandoah River at river mile 51.

For the reasons set forth in our Opinion No. 357 (27 FPC 830) the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) The Shenandoah River and its South Fork to at least Port Republic at river mile 156 is a navigable water of the United States.

(2) Applicant is a corporation organized under the laws of the Commonwealth of Virginia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative an-

---

[1] Potomac Light & Power Company, Project No. 2343 (32 FPC 584).

nual charge is 1,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

> Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Northern Virginia Power Company (Licensee) of Winchester, Virginia, under Sections 4(e) and 10(i) of the Federal Power Act (Act) for a period effective as of April 1, 1962 and terminating December 31, 1993, for the continued operation and maintenance of constructed Warren Hydro Station, Project No. 2391, located on the Shenandoah River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2391 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined; and

(ii) a concrete dam located on the Shenandoah River about 51 miles above the mouth of the river; a headrace about 350 feet long; a powerhouse containing three turbines, each having a capacity of 350 horsepower connected to three generators, each having a capacity of 250 kilowatts; and all other structures, fixtures and equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964), entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Article 1 through 11, are attached hereto and made a part hereof, and subject to the following special condition set forth herein as an additional article:

Article 12. The Licensee shall pay to the United States the following annual charge, effective as of April 1, 1962:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $50.00.

(D) The terms and conditions of the Act which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 451

SOUTHWESTERN PUBLIC SERVICE COMPANY, DOCKET NO. E-7038

OPINION AND ORDER ALLOWING SUSPENDED RATES TO BECOME EFFECTIVE AND FINDING JUST AND REASONABLE WHOLESALE RATES

(Issued March 2, 1965)*

Syllabus

1. Enactment of Rural Electrification Act evidenced Congressional awareness of failure of privately financed electric utilities to provide benefits and advantages of electricity to residents in rural and relatively remote areas. P. 347.
2. An integrated power supply system serving Cooperatives as well as public utility's other customers permits more economical inter-system diversification and lower costs. P. 348.
3. Evidence is persuasive that if Southwestern is not permitted to continue supplying Cooperative's energy requirements at agreed on rates, Cooperatives would construct duplicating facilities with resulting detriment to all customers. P. 348.
4. In determining whether lower rates to Cooperatives are justified, consideration must be given to substantial differences in nature of service rendered by Cooperatives from that provided by investor-owned distributors. P. 348.
5. In light of instant circumstances, Cooperatives have made a strong and persuasive showing for distinctive rate treatment. PP. 349, 350.
6. Southwestern's lower rates to Cooperatives benefit its other wholesale customers by permitting economies on scale not otherwise possible. P. 350.
7. Rates on basis of 3.7 percent return claimed by company is justified by record, being a return in excess of its weighted costs of senior capital. P. 350.
8. In resolving ultimate issue of undue discrimination, it is appropriate to consider whether difference in rate proposed by Southwestern would seriously prejudice competitive business relationships between its investor-owned wholesale customers and Cooperative customers which receive lower rates. P. 350.
9. Physical proximity alone is insufficient evidence of competition. P. 350.
10. Difference between rates Southwestern charges Community [investor-owned purchaser] and those proposed to be charged Cooperatives is insufficient to give latter advantage in area. P. 350.
11. Southwestern's rates to Cooperatives are not unduly preferential or discriminatory; such rates are just and reasonable. P. 351.
12. Commission does not accept Cooperative's contention of entitlement to rates lower than any other group of customers as an "equalizer" because their loads are predominantly rural—such argument has its limits, depending on other relevant factors. P. 351.
13. In finding subject rates just and reasonable, and not unduly discriminatory, Commission is guided by fact that it is fixing rates for future in an industry which has large opportunities for reducing unit costs. P. 351.
14. Use of maximum kwh charges is almost universally limited to situations involving firm sales of power, comprising, generally, entire requirement of customers. P. 352.

---

*Initial decision appears on p. 362. See order on rehearing issued April 26, 1965, 33 FPC 891; modified by Opinion No. 451-A issued September 9, 1965, 34 FPC 841.

15. It would not be useful here to attempt almost impossible task of determining rate of return generally being earned by other business undertakings of comparable risks in same general part of country. P. 353.
16. Determination of fair rate of return is not to be determined by mechanical application of mathematical formula—it requires exercise of Commission's informed judgment on whole of relevant evidence in particular case. P. 354.
17. From investor, company or consumer view, maintenance of good and adequate service requires that utility be afforded opportunity to receive enough in revenues to not only cover operating expenses but also capital cost of business and thus maintain financial integrity. P. 354.
18. There is no precise answer to question of rate of return; rather there is zone of reasonableness within which Commission is free to fix a rate. P. 354.
19. Rate of return of Southwestern's other wholesale customers cannot be considered in isolation from rate of return it has accepted for service to Cooperatives. P. 354.
20. Southwestern is entitled to rate of return of 6 percent upon its investment in wholesale for resale service. P. 355.
21. Consistent with Southwestern's uniform rate schedule practice for Cooperatives, a uniform rate schedule should apply for service to the three investor-owned distributors. P. 356.
22. Commission *finds* just and reasonable wholesale rates and *allows* suspended rates to become effective, in a proceeding under Sections 205 and 206 of the Federal Power Act.

D. H. Culton and *R. W. Richards* for Southwestern Public Service Company.

A. M. Swarthout for Lea County Electric Cooperative, Inc.

Bennett L. Smith for Community Public Service Company.

Phil R. Lucero for New Mexico Public Service Commission.

William C. Wise, Earnest L. Langley, Dale H. Johnson and *William M. Siegenthaler* for The Electric Cooperatives: Bailey County Electric Cooperative, Inc.; Swisher County Electric Cooperative, Inc.; Central Valley Electric Cooperative, Inc.; Tri-County Electric Cooperative, Inc.; South Plains Electric Cooperative, Inc.; Roosevelt County Electric Cooperative, Inc.; Rita Blanca Electric Cooperative, Inc.; North Plains Electric Cooperative, Inc.; North Fork Electric Cooperative, Inc.; Lyntegar Electric Cooperative, Inc.; Lighthouse Electric Cooperative, Inc.; Lamb County Electric Cooperative, Inc.; Greenbelt Electric Cooperative, Inc.; Farmers Electric Cooperative, Inc., of New Mexico; and Deaf Smith County Electric Cooperative, Inc.

Tom Reavley for Texas Electric Cooperatives, Inc.

Drexel D. Journey, Watt N. Martin and *Sandra J. Strebel* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

Ross, *Commissioner:* This proceeding arises under Sections 205 and 206 of the Federal Power Act and involves the question whether the rates charged by a public utility subject to the jurisdiction of this Commission are just and reasonable and not unduly preferential or discriminatory. The proceeding was initiated by the Commission's order issued May 15, 1962, 27 FPC 959, suspending the operation of certain rate schedules[1] filed by Southwestern Public Service Company (Southwestern), instituting an investigation concerning the lawfulness of all of Southwestern's rate schedules on file and as supplemented and proposed to be changed, and providing for a public hearing to be held concerning the lawfulness of such rates. Thereafter the New Mexico Public Service Commission filed notice of the intent to intervene, and petitions to intervene were filed by Community Public Service Company (Community), Lea County Electric Cooperative, Inc. (Lea County) and, jointly, by fifteen rural electric cooperatives (hereinafter referred to collectively as the Cooperatives) served by Southwestern. A public hearing was held, briefs were filed and oral argument had before the Presiding Examiner who issued his initial decision on September 1, 1964.

---

[1] They became effective on October 19, 1962 subject to the further order of the Commission.

In substance the Presiding Examiner concluded (1) that the rates charged by Southwestern for energy sold to its wholesale customers subject to this Commission's jurisdiction were unjust and unreasonable, and (2) that the differences between the rates charged to its investor-owned customers and those charged consumer-owned cooperatives were unreasonable, and thereby subjected the former to undue prejudice and disadvantage. Briefs have been filed in support of and in opposition to exceptions to those conclusions, and the parties and participants have argued the matter orally to the Commission.

The suspended rate schedules with which we are here concerned have the effect of reducing Southwestern's wholesale rates to all of its consumer-owned rural electric cooperatives except Lea County and Pioneer Cooperative Association, Inc. Prior to the instant filing, the rates to the Cooperatives were lower than those to Southwestern's three investor-owned purchasers,[2] so that the rates here under question widen the gap between the level of rates charged to the fifteen cooperatives on the one hand and the privately financed utilities on the other. Southwestern does not, by means of the proposed revised rate schedules or otherwise, propose any change in the wholesale rates presently charged to the investor-owned customers.

Southwestern is an integrated electric utility company. Its service area covers approximately 45,000 square miles and includes a portion of Morton County, Kansas, the Oklahoma and the Texas Panhandles, the South Plains area of Texas, the Clovis-Portales region of eastern New Mexico, and the Pecos Valley area of that State, namely, Eddy and Chaves Counties. As of December 31, 1962, Southwestern provided electric service at retail to 213,588 customers in 126 cities and towns in Texas, New Mexico, Oklahoma and Kansas. Southwestern also furnished firm service to 18 wholesale customers for resale: the three investor-owned companies already mentioned and 15 rural electric cooperatives. Emergency or supplemental service is rendered to three other distribution customers, two of which, including Lea County, are also consumer-owned.

During the test year 1962, 77.4 percent of Southwestern's sales were made at retail to its domestic commercial and industrial customers, and 22.6 percent were to its wholesale customers. Of the 22.6 percent in the latter classification, 15.8 percent were firm sales to the 15 cooperatives who are intervenors in this proceeding, about 0.4 percent were to Lea County in the nature of standby and supplemental service, about 1.0 percent were sales to Community, about 5.2 percent were to New Mexico Electric and about 0.2 percent were to Cochran.

The generating capability of Southwestern's interconnected system on December 31, 1962, was 971,500 kilowatts from twelve steam-electric generating stations and 6,300 kilowatts from internal combustion engines. Since then, Southwestern has installed a 10,000 kilowatt gas turbine unit and a 200,000 kilowatt steam-electric unit. Another 200,000 kilowatt unit is scheduled for service in the spring of 1965. Southwestern's backbone transmission system presently operates at 115,000 volts but some sections have been constructed for operation at 230.000 volts. At the end of 1962 Southwestern had 4,159 miles of transmission lines of 22,000 volts or more.

---

[2] New Mexico Electric Service Company (New Mexico Electric), Cochran Power and Light Company (Cochran), and Community Public Service Company (Community).

The Cooperatives and the three investor-owned distributing companies are dispersed throughout Southwestern's service area. The area served by North Plains Electric Cooperative, Inc. (North Plains) includes Hansford, Lipscomb, and Ochiltree Counties, Texas in their entirety. Community engages in the distribution of electricity in the cities of Spearman and Perryton, in Hansford and Lipscomb Counties, respectively, and other communities and customers along its lines in Hansford, Lipscomb and Ochiltree County, Texas.

Section 205 of the Federal Power Act requires that we determine (a) whether the rates and charges made and received by Southwestern in connection with the transmission or sale of electric energy subject to our jurisdiction are just and reasonable and (b) whether with respect to any such transmission or sale Southwestern is making or granting any undue preference or advantage to any person or subjecting any person to undue prejudice or disadvantage, or is maintaining any unreasonable difference in rates, or in other respects, either as between localities or as between classes of service. We shall first consider the discrimination question.

The Discrimination Issue

It is uncontroverted that the rate schedules which Southwestern applies to its three investor-owned purchasers of energy for resale are higher than those which it applies to its consumer-owned rural electric customers. It is also conceded by all of the participants in the proceeding that not all differences in rates are prohibited by Section 205, but only those which are unreasonable and which result in undue prejudice or disadvantage, and that differences in rates as between appropriately classified customers are consistent with Section 205 and represent the usual practice in the industry.

Relying upon certain earlier Commission declarations of policy respecting differences in rates, our Staff and Community contend that the differences between the rates which Southwestern charged New Mexico Electric, Cochran, and Community, and those charged the Cooperatives are unreasonable and result in an undue prejudice and disadvantage to Southwestern's investor-owned utility customers. Neither New Mexico Electric nor Cochran have complained to this Commission of such differences and neither participated in the proceeding. Of Southwestern's other wholesale customers, only Community opposes the proposed changes in rates. There may, however, be significance in the fact that New Mexico Electric has informed Southwestern that it intends to install its own generating facilities in the near future. New Mexico has acquired a site and is proceeding toward the construction of such facilities for completion in 1967. It has informed Southwestern that it proposed at that time to terminate its purchases.

The Cooperatives and the Administrator of the Rural Electrification Administration[3] contend that rural electric cooperatives, without regard to location or the particular circumstances under which a given cooperative may operate, are properly placed in a category separate and apart from investor-owned utilities, and thus entitled to a difference and lower rate, without violating the prohibitions of Section 205. Southwestern takes a similar position, maintaining that many other companies engaged in the generation and sale of electric energy for resale have established a different classification of rates for rural electric cooperatives and that many State courts and commissions have recognized the validity of the classification.[4] Southwestern supports its position on the circumstances of its service area in which it claims it could not have offered area coverage to the rural areas on an economical basis. Southwestern believes that it is in the interest of all of its customers to offer wholesale power to the REA co-ops at lower rates to avoid duplicate generation and transmission systems in the area, but at rates which cover cost plus some return on investment.

---

[3] The Administrator, although not a party to the proceeding, was permitted to make a statement of position at the hearing and to file a brief *amicus curiae* on exceptions to the initial decision of the Presiding Examiner.

We agree with Southwestern and Community that the determination of the basic issue in this proceeding must be made in the light of the conditions which now exist in Southwestern's service area, giving particular consideration to the consequences to Southwestern, and its purchasers, and to the ultimate consumers within Southwestern's service area. We shall not, therefore, in this decision undertake to establish a broad rule applicable to every situation but shall, instead, confine ourselves to the circumstances and conditions reflected in the record in this case. However, we disagree with Community to the extent that its view of relevant circumstances is limited to a consideration of the cost of the service by Southwestern to its various customers.

While we reject the Cooperatives' broad conclusion some of their contentions are helpful in resolving the issue before us. In this connection the enactment of the Rural Electrification Act in 1936 evidenced Congressional awareness of the failure of privately financed electric utilities to provide to those residing in sparsely settled rural and relatively remote areas the benefits and advantages of electricity. It was recognized that the high cost of money for construction purposes combined with the heavy investment required for each customer served made it impracticable for rural residents to procure such service without governmental assistance. Some of the privately financed utilities including Southwestern recognized the advantages which would flow from the extension of electric service to rural areas, welcomed the organization of the electric cooperatives within their service area, and cooperated with them to that end by furnishing low-priced power at wholesale.

In Southwestern's service area agriculture is of substantial importance. For many years that area has been highly prosperous, not only in the larger cities and towns, but also in the farming and cotton-raising sections. At the same time this area is sparsely occupied and there are few electric utility customers per mile. Statistics applicable to 14 of the 15 Cooperatives who are intervenors here reveal that they had constructed 31.948 miles of transmission and distribution lines which have an average of only 2.0085 customers per mile and an average investment per customer of $1,112. This results from the Cooperatives' undertaking to provide complete area service. Evidence adduced by Southwestern shows that had that company undertaken to cover the rural areas within, and adjacent to its service area with area coverage, it would have been necessary for it to make investments in facilities which would have resulted in rates to the rural customer substantially higher than those offered by the cooperatives to an extent, in Southwestern's opinion, that they would be costly beyond the value of the service.

---

[4] *Wholesale Rates for Electric Power to Rural Cooperatives Associations* (Kentucky P.S.C., 1937) 19 P.U.R. (N.S.) 22; *Highland Utilities Co.* v. *The Western Colorado Power Co.* (Colorado P.U.C., 1943) 48 P.U.R. (N.S.) 180; *Public Service Company of Indiana* (Indiana P.S.C., 1961) 37 P.U.R. 3d 485; *State of North Carolina* v. *Municipal Corp. of Scotland Neck* (N.C. S. Ct., 1955) 243 N.C. 193, 90 S.E. 2d 519, among others.

The evidence also shows that all of Southwestern's customers have benefitted from the sales to cooperatives, notwithstanding the lower rates. By reason of the inclusion of the power requirement of the rural electric cooperatives in Southwestern's systems load, a larger power supply is made possible which, in turn, results in the use of larger generating units and higher voltage transmission lines and thus lower costs per kilowatt hour of energy. An integrated power supply system serving the Cooperatives as well as Southwestern's other customers, retail and wholesale, also permits more economical inter-system diversification. These are material benefits to the Company and presumably are shared by all of the immediate and ultimate customers of the Company.

The evidence is persuasive that if Southwestern is not permitted to continue to supply the Cooperatives with their energy requirements at the rates which have been agreed upon between them that the co-ops would undertake the construction of generation and transmission facilities with funds borrowed by them from the REA. The resulting duplication of facilities would be detrimental to all of Southwestern's customers.

The Cooperatives are the fastest growing segment of Southwestern's load and the record reveals that its loss to Southwestern would be the eqivalent of losing three years of load growth. The consequence would be an immediate burden of excess capacity and an ultimate burden of the loss of the economies of scale which could cause higher rates to all classes of customers than would be possible if the cooperative load were served by Southwestern's integrated power system.

Furthermore, there are substantial differences in the nature of the service rendered by the Cooperatives from that provided by the investor-owned distributors to which we believe consideration must be given in determining whether lower rates to the Cooperatives are justified in this case. Since Community is the only investor-owned distributor in this proceeding complaining of the differences in rates it is appropriate to compare the conditions under which Community renders service and those surrounding the service by North Plains.

It is clear from the evidence that Community Public Service Company (and its predecessor companies) was, and still is, unwilling to undertake comprehensive area service throughout the rural areas served by North Plains, but restricts its service to areas closely adjacent to its two main transmission lines.[5] Its extension policy, which has been in effect for several years, is that it will not take on a new customer in the more remote areas if the investment is more than five times the estimated gross annual revenues from the potential customer. Community has been under no legal inhibitions so to limit its service to the immediate environs of its transmission lines.

The service area of Community has remained substantially unchanged for several decades. It has purchased its power requirements from Southwestern since 1935. The transmission line from Spearman to Follett along the Sante Fe Railroad was built even earlier and both the railroad and the transmission line passed through seven other small towns. It was not until after the organization of North Plains that Community extended the line to Lipscomb and Higgins.

Spearman and Perryton being incorporated municipalities of more than 1,500 population each, are not open to service by North Plains,[6] and thus Community has the exclusive right to serve electric consumers residing in those municipalities. The other communities and areas are open for service by either or both of them.

---

[5] These lines closely follow the railroad line running northeasterly from Spearman to Follett, Texas, and the other intersecting line running in a southerly direction through Lipscomb to Higgins, Texas.

[6] Rural electric cooperatives are limited by the Rural Electrification Act to service in

When North Plains was organized in 1944, only six farms in the whole area which the Cooperative proposed to serve were receiving electric service. Three of them were located in the immediate environs of Perryton and three were along the railroad some four or five miles from that city. Community now serves about 125 consumers in rural areas but all are within a narrow strip lying within a mile or two of its existing main transmission lines.

In contrast, North Plains and the other cooperatives undertook to provide area coverage which necessitated extentions of service to all farms and other users of electricity in the rural areas of the counties which the Cooperatives were organized to serve. In discharging that obligation, North Plains has constructed 1,860 miles of transmission and distribution lines, and at present there is only one farm in the entire area which is not receiving service, and service is available to it. Even now, however, the customer density of the North Plains service area is slightly less than one per mile, and the investment per customer is $1,780. Community, on the other hand, had 19.59 customers per mile of distribution line, and an average investment in distribution plant of $409 per customer.

Southwestern and the Cooperatives have cited opinions of State courts and commissions holding that factors such as we have discussed justify wholesale service to rural electric cooperatives under a different schedule and at lower rates than those charged to electric utilities serving urban areas with high consumer density.[7] It is the position of the Staff of the Commission and Community that these decisions have no applicability here. In our view, these decisions are helpful to an understanding of the issues involved, but they do not control our determination, which must be based on the record in this case.

Staff and Community rely on our opinions in *Gulf States Utilities Company*, 1 FPC 522, and *Otter Tail Power Company*, 2 FPC 134. But the circumstances surrounding those cases differed significantly from those with which we are here confronted. As the Commission stated in *Wisconsin Michigan Power Company:*

> These early opinions were rendered more than two decades ago, before REA co-ops became major purchasers of power at wholesale. They would, therefore, not be dispositive of the contention that the cooperatives constitute a separate class of customers for rate-making purposes or other related contentions on which a full record is being made in another proceeding * * *.[8]

It is this proceeding to which we referred in the above quotation.

Based upon the record now before us we are of the view that the Cooperatives with which we are here concerned have made a strong and persuasive showing

---

rural areas which includes incorporated towns having a population when service is begun of 1,500 or less, unless the cooperative is the sole supplier of electricity of an incorporated city or town. Under the act the cooperative may continue to serve an incorporated municipality if the municipality increases in population above 1,500, and it may also continue to serve customers it had previously served if located in an area that should become annexed to a city, regardless of the size of the latter. Rural areas are also defined by Texas statute to include cities and towns of 1,500 or more, but by the statutes of New Mexico, incorporated cities and towns of 5,000 population are included.

[7] See footnote 4, *supra*.

[8] *Wisconsin Michigan Power Company,* Docket No. E-7026, Opinion No. 432, issued June 9, 1964, 31 FPC 1445, at p. 1451.

for distinctive treatment in the light of the circumstances of this case. They have set as a goal blanket service throughout the rural areas which they have undertaken to serve and have worked diligently to accomplish that goal. Although they now serve some substantial commercial and industrial loads in addition to their complete domestic and agricultural coverage their customer density remains only a small fraction of that of the investor-owned distributors, and the investment per customer is considerably higher. We further find that Southwestern's lower rates to the Cooperatives benefit Southwestern's other wholesale customers by permitting economies of scale not otherwise possible. Southwestern's attitude is thus consistent with the objectives of the National Power Survey in which we recommended pooling by small systems. In this respect, the Cooperatives are still in a stage of rapid growth and development of their market, and in the course of time their services should become more lucrative both to the Cooperatives and their wholesale supplier.

In addition, we note that the proposed rates to the Cooperatives cover the costs of providing the service and yield a return of some 3.7 percent as computed by the Company or approximately 5.5 percent based on the Cooperatives' cost of service. It is unnecessary to decide the many cost of service issues which account for the difference because we believe the record in this case justifies the rates on the basis of the 3.7 percent return claimed by the Company, a return in excess of the Company's weighted costs of senior capital.

Before reaching any conclusion on the ultimate issue of undue discrimination, we believe it appropriate to consider whether the difference in rates proposed by Southwestern would seriously prejudice the competitive business relationships between its investor-owned wholesale customers and the Cooperative customers which would receive lower rates.[9] Community is the only party claiming that it competes with a cooperative, *i.e.*, North Plains, in selling electricity, and that its higher rate from Southwestern is detrimental respecting its competitive efforts. In this connection, Community contends that it competes for business along the strip immediately adjacent to its main transmission lines, with the exception of the Cities of Spearman and Perryton for which Community has an exclusive franchise.

Community points out that it and North Plains both operate distribution systems in the towns of Twichell and Lipscomb and in the area within two miles of Spearman. North Plains has lines around and close to every town in the area and the lines of these two distributors cross at 37 points and approach each other at 27 other points.

However, physical proximity alone is insufficient evidence of competition. It merely depicts the results of Community's self-imposed service limitations and North Plains' willingness to provide area coverage. Community provides service to two-thirds of the residents of the town of Lipscomb and about 40 farms in that area. It was able to get this business, the evidence shows, because its residential rates are lower than those of North Plains. However, the evidence discloses only three instances in which customers switched supplies: one from North Plains to Community, another from Community to North Plains, and the third involved an exchange. All three cases involved farm customers.

The difference between the rates which Southwestern charges Community and those which it proposes herein to charge the Cooperative is insufficient to give the latter an advantage in this area. In the lower blocks Community's residential rates are already lower than the Cooperatives'. Both have a 2 cents per kwh final step, Community for consumption over 150 kwh, North Plains for over 200 kwh per month.

---

[9] Bonbright, James C., *Principles of Public Utility Rates*, Columbia University Press (1961), p. 384.

Community's principal contention revolves around new industrial and commercial customers in the rural areas and the oil field business in particular.

Community showed that in June 1963, it served a total of 1,415 customers including 386 commercial and one industrial customer outside the cities of Spearman and Perryton within the rural areas as defined by law. They represented about 25 percent of the customers served by Community in Hansford, Ochiltree and Lipscomb Counties. In 1963 Community was also serving five pumping oil wells, one oil field installation and one oil gathering station all near the community of Farnsworth. At the same time North Plains was serving approximately 200 pumping oil wells, 10 pump stations and a large number of other field installations. While Community claims that at least 50 of these oil field installations were within less than one mile from its facilities capable of handling the loads involved, it failed to produce any evidence showing any efforts it made to provide this service.

A total of only three instances of competition in this area were described with any specificity in which both Community and North Plains bid for new commercial and industrial business. In one, 27 oil field units were involved. Twenty-six of these were small, ranging from 15 to 55 horsepower. The evidence shows that Community was interested only in the large load. North Plains bid for the business on an "all or none" basis and was successful.

In another instance two oil plants were involved. Again, Community was anxious to bid on only one of them. North Plains bid on both and obtained the contract. In the third instance bids were invited to serve "one completed oil well and possibly five others", one or all of which were a distance of about a mile from Community's facilities. However, the purchaser would have had to build lines to each of its wells if Community's offer had been accepted. Here again North Plains procured the contract.

Community adduced testimony to the effect that North Plains was able to get the business in these three situations because it offered rates lower than those offered by Community. North Plains' testimony is to the effect that not the rates but its area coverage had been the key to its success. We are persuaded that the latter version is the correct one, and that the difference between the rates which Southwestern proposes to charge the Cooperatives and the just and reasonable rates we are prescribing for its sales to Community will have no serious or substantial adverse effect upon the latter's ability to compete for business in the rural areas outside the cities of Spearman and Perryton.

In the light of the foregoing considerations, we find that Southwestern's rates to the Cooperatives are not unduly preferential or discriminatory. We further find that such rates are just and reasonable. However, we emphasize that the rates we are sustaining are proffered and advocated by the company; they are not being imposed over the company's objection, and we intimate no conclusion as to the result if the situation were otherwise.

This is not to say that the Commission accepts in this case the broad contention of the Cooperatives that they are entitled to rates lower than any other group of customers as an "equalizer" because their loads are predominantly rural. The "equalizer" argument has its limits, depending on other relevant factors.

In reaching our judgment that Southwestern's rates to the Cooperatives do not fall below minimum standards for a just and reasonable rate and are not unduly discriminatory, we are guided by the fact that we are fixing rates for the future in an industry which has large opportunities for reducing unit costs. It is significant that Southwestern is now adding large, efficient generating units to its system and undoubtedly will meet its future growth with even more efficient and economic facilities. There is every reason to believe that in the years ahead these rates to the Cooperative customers will yield a higher return than indicated by the 1962 test year figures. There is also every reason to expect that the Cooperative systems will become stronger as they build up the loads in the broad areas they serve.

Rate to Lea County Electric Cooperative, Inc.

Lea County Electric Cooperative, Inc., as distinguished from the other rural cooperatives in this case, generates the greater part of the energy which it sells, and receives only supplemental energy from Southwestern. Southwestern's maximum obligation to Lea County is 15,000 kw. The contract provides that the billing demand for any of the months in which the demand charge applies shall be the actual demand in that month unless a higher demand is estabilshed during the preceding months of April through September, but not less than 4,000 kw. This provision contrasts with that in the other cooperative contracts, none of which contains either the ratchet or the minimum features.

During 1962 Lea County's maximum demand during the billing demand months was about 7,770 kv. The average billing demand during the six months in which demand charges apply was about 7,000 kw.

If the new cooperative rate REA-1 (including the 7.5 mill maximum charge per kwh) is applied to Lea County's purchases in 1962, the resulting bill would be about $126,400[10] or $14,262 (10%) less than the actual bill of $140,662. If the maximum kwh charge is not applied, the bill under the new rate would be about $140,612 or $50 less than the actual 1962 bill. The indicated 10% reduction in charges to Lea County compares with the 2% over-all reduction proposed by the company for the other cooperatives. This difference comes about almost entirely from the operation of the maximum kwh charge.

Lea County contends that the service is not properly characterized as "standby" because the electric energy is served continuously. It claims that it is entitled to the same rates as the other cooperatives subject only to the differential which has heretofore existed, namely the 4,000 kw minimum with a 100 percent ratchet.

From the record it appears that Lea County has been served for a period of years under a rate which did not contain a maximum kwh charge, but which was applied uniformly to all of the cooperatives. The use of maximum kwh charges is almost universally limited to situations involving firm sales of power, comprising, generally, the entire requirements of the customer. Although the purchase by Lea County at Denver City (115 kv) delivery point is firm, it represents but a small portion of its system requirements and is made at a relatively low load factor of 18.4%. This is not a situation to which a maximum kwh charge is applicable.

The new cooperative rate schedule REA-1 has one favorable feature not included in prior schedules which should be made available to Lea County, the elimination of the fuel adjustment clause. Application of the new rate, even without the maximum kwh charge, will result in lower charges to Lea County than under the present rate schedule.

Accordingly, we conclude that the new rate schedule modified to eliminate the provision for a maximum kwh charge shall apply to Lea County at the Denver City point of delivery, subject to the existing minimum charges. At the Plains

---

[10] The monthly demand and sales amounts used for these computations are the combined data for the Plains and Denver City delivery points. A slightly different bill will result when the rate is applied separately to each.

(12 kv) point of delivery, the new rate schedule shall apply in its unmodified form, that is, with the inclusion of the provision for a ceiling on the charge per kwh.

Cost of Service

a. *Rate of Return*

With respect to the appropriate cost of service for Southwestern's three investor-owned wholesale customers, including of course, Community, the principal issue is the appropriate rate of return.

Southwestern seeks a rate of return on its wholesale electric service falling within a range of from 7½ to 8 percent. Such an overall rate would yield a return on equity capital of from 14.75 to 16.00 percent.[11] The evidence submitted by Southwestern included comparisons with the earnings of 14 utilities operating in the States of Texas, New Mexico and Oklahoma. Included also in Southwestern's evidence on the subject of rate of return was a study of 14 electric utilities located in "other fair value" jurisdictions, namely Alabama, Arizona, Illinois, Indiana, Montana and Pennsylvania. In addition there was included a study of 14 purportedly comparable unregulated commercial and industrial companies.

Southwestern's rate of return witness computed the present cost of Southwestern's long-term debt at 3.58 percent. He estimated the probable average net cost to Southwestern on additional bonds which may be issued over the next few years as 4.75 percent and the weighted average for the present and the future as 3.87 percent. A similar computation led to his conclusion that the cost of preferred stock money would be 4.63 percent. This witness expressed the view that the upward trend in long-term interest rates will continue.

Treating Southwestern's contentions at this point, we are of the opinion that it would not be useful to attempt the almost impossible task of determining the rate of return generally being earned in the same general part of the country on investments in other business undertakings of comparable risks. There is no sound basis for such a comparison in this record. Obviously the evidence of earnings of unregulated enterprises cannot control our decision herein nor can we be guided by earnings of regulated companies where there is no evidence that such earnings are "in line with the proper rate determinations for the various companies as set by regulatory agencies."[12]

Moreover, it is our opinion that the forecast by Southwestern's witness of continued high interest rates on A-rated public utility bonds is highly speculative and we are not prepared to accept it. Our appraisal of a fair return for Southwestern will assume the currently embedded cost of its debt and preferred stock financing, recognizing that Southwestern will have opportunities for effecting reductions in its overall cost of capital to offset any possible increases in the cost of debt.

In its rate of return study, the Staff used a capital structure which included Southwestern's current long term debt and outstanding preferred stock, but

---

[11] Southwestern's capital structure employed in its rate of return study were as follows:

	Ratios used (percent)
Long-Term Debt	56.00
Preferred Stock	11.00
Common Equity	33.00
	100.00

[12] *Wisconsin Michigan Power Company, supra*, p. 1456.

set up in a separate category the amount of income taxes accumulated under both Sections 167 and 168 of the Internal Revenue Code in the amount of $14,781,183.

Following the issuance of the Commission's Opinion No. 417[13] which dictated the elimination of the requirement of a return of 1.5 percent on that portion of the accumulated accrued taxes, which represented accruals for liberalized depreciation, the Staff revised its recommendation with respect to rate of return. As a result of this revision the Staff finally proposed an allowance of a 6 percent rate of return, which would produce a return of 11.3 percent on Southwestern's common equity.

The Cooperatives did not submit testimony on rate of return in their direct case, but did offer evidence on that subject on rebuttal. Employing Southwestern's current capital structure and the current cost of its long term debt and preferred stock money, the Cooperatives proposed a return on the Company's common equity of 9.0 percent. The Cooperatives thus arrived at a return of 5.472 percent which they rounded off at 5.5 percent.

It is axiomatic that the determination of a fair rate of return for utilities subject to our jurisdiction is not to be determined by the mechanical application of a mathematical formula. The determination we must make requires the exercise of our informed judgment on the whole of the relevant evidence in the particular case.

We are well aware that from the investor or company point of view, as well as the interests of the consumer, the maintenance of good and adequate service requires that the utility be afforded an opportunity to receive enough in revenues not only to cover its operating expenses but also the capital costs of the business, and thus maintain its financial integrity.

We are further aware that there is no precise answer to the question of a rate of return but rather that there is a zone of reasonableness within which the Commission is free to fix a rate. We feel free within the ambit of our statutory authority and the standards of due process to make the pragmatic adjustments which are called for in each particular case. (*Cf., F.P.C.*, v. *Natural Gas Pipeline*, 315 U.S. 575, 585–586.) We think this is a case which peculiarly requires such adjustments.

Southwestern, by the establishment of the rates to the Cooperatives here under consideration, has agreed to what we consider the lower limits of a zone of reasonableness. The rate of return to Southwestern's other wholesale customers cannot be considered in isolation from the rate of return which Southwestern has accepted for service to the Cooperatives. We find nothing in this record which we think justifies the utilization in a cost of service computation of a rate higher than 6 percent and yet permit us appropriately to protect the interests of the ultimate consumer receiving service from other wholesale for resale purchasers from Southwestern.

Both Southwestern and the Commission staff have introduced extensive rate of return studies in which the key consideration was computing the appropriate return on common equity. While the Commission must, of course, provide a return that will enable the Company to attract capital and maintain its financial soundness, the Commission in recent cases has considered the overall return as well as the return on equity. In *Wisconsin Michigan Power Company, supra.*, the Commission found that an overall return of 6 percent on its wholesale business which would provide that Company a return of 9.3 percent on equity was just and reasonable. A 6 percent overall return would provide Southwestern with a return on its common equity upwards of 11 percent and more if it chooses to bring a greater percentage of debt into its capital structure.

---

[13] *Alabama-Tennessee Natural Gas Co.*, 31 FPC 208.

Southwestern is a seasoned, well-developed integrated electric utility whose management has demonstrated vision and the awareness of the economic facts of life. It has well-established markets in areas which are enjoying unusual load growth and bright prospects for the future. All of these factors enable the Company to attract capital upon favorable terms, and this is evident in the indicated yield on the market price of the Company's common stock. Under all of the evidence in this record we conclude that Southwestern is entitled to rate of return of 6 percent upon the Company's investment in its wholesale for resale service.

b. *Other Cost of Service Issues*

The other cost of service issues with respect to the rates to the investor-owned customers of Southwestern may be disposed of briefly.

Evidence concerning the Company's cost of service for the test year 1962, showing separately the amount assigned and allocated to the three investor-owned customers, was presented by Southwestern, the Cooperatives, and the Commission's staff.

The Company's presentation, when adjusted to a 6 percent rate of return on a rate base reduced by accumulated deferred income tax amounts resulting from the use of liberalized depreciation including a normal provision for cash working capital, *Alabama-Tennessee Natural Gas Company, supra*, results in a cost of service applicable to the three utilities of $1,568,632, only about $37,000 above the Cooperatives' computed at 5.5 percent rate of return on a much smaller rate base. The Cooperatives, in addition to reducing the rate base by the amount of accumulated deferred taxes arising from liberalized depreciation, also reduced the rate base by the amount of accumulated deferred taxes arising from accelerated amortization. Consistent with our decision in the *Alabama Tennessee* case, we do not in this case reduce the rate base by the amount of the latter deferral. At 6 percent rate of return and a rate base reduced to reflect accumulated deferred taxes arising from liberalized depreciation only, the Cooperatives' cost applicable to the private utilities would be $1,659,470.

The Staff's presentation allocated to the investor-owned utilities a total of $1,628,080 (Examiner's Decision, Appendix E). The Staff utilized a rate of return of 6 percent applied to a rate base reflecting deduction of accumulated deferrals from liberalized depreciation.

In view of these small differences we find it unnecessary in this proceeding to pass upon the many differences in principle between the details of the cost of service cases put in by staff, the Cooperatives, and that put in by Southwestern. We shall therefore utilize the Company's computation of the cost of service issues, without necessarily accepting the underlying theories on which it is based, with the adjustments we have noted. Under the circumstances, the cost of service so determined cannot be said to prejudice the Company or its wholesale customers. Accordingly, we find the just and reasonable cost applicable to service by Southwestern to the three utility customers is $1,568,632. The rates for service to Southwestern's three investor-owned companies shall be reduced to a level to meet such costs of service. Attached as Appendix A is a cost of service computation which reflects our conclusions.

Level of Rates to Investor-Owned Distributors

Apart from the cost of service issues, Southwestern raises the separate question whether it should be permitted to include an added element of return in its rates to the three investor-owned distributors to compensate for the low return on its sales to the Cooperatives. In this connection, Southwestern undertook to show that although it was, and would be, earning some return from the sales to the Cooperatives, it was not, and would not be, earning in excess of its cost of service including a reasonable return on all its wholesale business, considered as a group.

Such an averaging goes beyond what is permissible in ratemaking at least in the circumstances of this case. It is one thing to say that Southwestern may voluntarily make rate concessions which are justified in the public interest to one group of its customers, but it is quite another to say that it may do so at the expense of its other customers. It seems to us that each group of wholesale customers has a right to service at just and reasonable rates and that, ordinarily, the others may not be compelled to bear the burden of such rate concessions.

Rate Schedules

Southwestern utilizes four different rate schedules for computing charges to its three investor-owned utility customers:

New Mexico Electric Service Co.	FPC Electric Rate Schedule No. 14
Community Public Service Company	FPC Electric Rate Schedule No. 17
Cochran Power & Light Co.	
Whiteface	FPC Electric Rate Schedule No. 15
Morton	FPC Electric Rate Schedule No. 34

There is no uniformity in these rate schedules either as to rates or as to rate schedule provisions, such as fuel clause, power factor clause, demand determination or minimum bill. This contrasts with the uniform rate schedule practice established by the Company for its services to the Cooperatives.

To comply with our determination of cost applicable to, and thus revenues which it may receive from, its three investor-owner customers, Southwestern must file appropriate supplements to the four rate schedules which are now on file. We believe that consistent with its uniform rate schedule practice for the Cooperatives, a uniform rate schedule should apply for the service to the three investor-owned distributors. Accordingly, we shall require the Company to file supplements to its four above-mentioned rate schedules which shall be uniform as to rates and applicable rate schedule provisions.

The record itself is bare of suggestions as to the form of rate or the substance of rate schedule provisions that may be appropriate for the three investor-owned customers. However, the existing rate schedules present a basic outline of what may be the form of a proper rate structure. Although the record does not contain the basic billing determinants used to bill the three customers, the data in the record, particularly FPC Form No. 1 for the company, show separately on an annual basis the kwh delivered, the demand charges, energy charges and adjustments for fuel cost and power factor. Detailed data on monthly transactions, which agree with the data in FPC Form No. 1, were furnished by the Company to the Staff and are in the Commission's files in this docket. Thus, adequate data are available in this case to permit the design of a rate structure applicable to service by the Company to its three investor-owned utility customers.

The four rate schedules applicable to the investor-owned utilities are of the demand-energy type. We believe that such rate form is appropriate for the service in question and shall utilize it here.

The provision for determination of the billing demand is essentially the same in all four schedules, except for the provision in Rate Schedule FPC No. 34 (Cochran Power & Light Co., Morton delivery point) that the combined cotton gin demand shall not be included in the amount for the eleven preceding months used for ratchet purposes and the absence of a ratchet provision in Rate Schedule No. 15 (Cochran Power & Light Co., Whiteface delivery point). The record does not disclose the reasons for the modified demand determination provisions in these two rate schedules, and it does not appear from the available data that the modifications are either necessary or warranted. In the rate schedule we prescribe here we shall utilize the billing demand determination provision contained in the rate schedules available to New Mexico Electric Service and to Community. Such a provision, according to the available data, would increase by 609 the 1962 applicable demand units for the Morton delivery point from 20,592 kw to 21,201, and for the Whiteface delivery point by 610, from 4552 to 5162, for Cochran.

The minimum bill provisions of the four rate schedules in question are not uniform. All of them are based on the demand charge for the month, but two of them contain modifying clauses. It appears that a uniform minimum bill providing for a payment based on the billing demand for the month would be fair and proper for the schedule we prescribe herein.

Consistent with the pattern of differences among the schedules available for service to the three investor-owned customers, there are differences in the power factor and fuel cost adjustment clauses.

Data in the record, particularly Southwestern's Exhibit No. 13, page 3, indicate that although the cost of fuel is expected to increase from the 1962 level, it would become stabilized in 1965–66. There is no fuel adjustment clause utilized in the rate schedules for the Cooperatives and, on the other hand, production expenses other than fuel are shown as decreasing, as is the investment per kilowatt in the steam production plant. On the basis of the record, it appears that no fuel adjustment clause need be included in the rate schedule for service to the three investor-owned customers.

Insufficient data are available to permit the inclusion of a specific, uniform power factor adjustment clause in the rate schedule we will prescribe herein. Accordingly, the rate contained in the rate schedule is computed on the basis of no adjustment for the power factor of the buyer. We shall, however, permit Southwestern to propose a power factor adjustment provision at the time it files the rate schedule pursuant to this order.

The proposals for inclusion of a power factor adjustment clause shall be accompanied by fully documented statements of (a) reasons for need of such a provision, (b) cost and operating data supporting the specific adjustment values, (c) computations of any required adjustment of rate levels we prescribe here to return to the company the cost of service applicable to the three investor-owned customers and (d) a tabulation, by months and by each customer, for the year 1962, showing the billing units and the results of the application of such adjusted rate levels to the billing units. The tabulation shall also contain a comparison of monthly charges so computed with similar charges computed under the rates we here prescribe.

Primary service discount provisions are contained in the present rate schedule for Community and the rate schedule available to Cochran for the Morton delivery point. These deliveries are made at 66 kv and 115 kv. Although delivery to New Mexico Electric, the largest sale in question, is made at 115 kv, no such adjustment is provided for it. No adjustment is likewise provided in the rate schedule available to Cochran at Whiteface, the smallest sale in question, where delivery is made at 2.3 kv.

Annual sales to the three utilities at primary voltage involve approximately 263.3 million kwh, while the single delivery at secondary voltage involves only about 1.6 million kwh. Since a single, uniform rate is being ordered by us for the three utilities, no provision for delivery voltage discount or charge is necessary because of the insignificant difference it would effect in the net charges to individual customers when compared with charges without such a provision.[14]

Utilizing the cost of service of $1,568,632 described above and billing units available in the files of the case, the following rates shall apply to sales by the Company to its three investor-owned customers:

Demand Charge:

$1.15 per kw for the first 5,000 kw of monthly billing demand; 0.95 per kw for all additional kw of monthly billing demand.

Energy Charge:

4.1 mills per kwh for all energy delivered during the month.

The billing units utilized in computation of this rate are shown in Appendix B hereto.

The following table compares the charges to the three customers as actually made in 1962 and as computed under the rate schedule we prescribe herein.

Purchaser	Actual charge[1]	Computed charge	Reduction
New Mexico	$1,674,147	$1,254,747	$419,400
Community	358,219	258,921	99,298
Cochran:			
Whiteface	18,210	12,654	5,556
Morton	86,520	58,398	28,122
Total	2,137,096	1,584,720	552,376

[1] Examiner's Decision, Appendix E.

The rate schedule which we prescribe herein is attached as Appendix C to this order. It contains all rates, charges and credits applicable for the service to the three investor-owned customers and supersedes all rates, charges and credits contained in the present contracts and rate schedules. Such rate schedules shall be used by Southwestern for billing the above three customers from and after the effective date of this order.

The Commission further finds that:

(1) Southwestern Public Service Company is a corporation organized and existing under and by virtue of the laws of the State of Texas.

(2) Southwestern owns and operates facilities for the generation of electric energy and an integrated, interconnected, transmission system employed in the transmission and sale, at retail and at wholesale, of electric energy over a large area in northwest Texas and in the adjoining portions of the States of Oklahoma and New Mexico.

(3) Southwestern is a public utility as defined in Section 201(e) of the Federal Power Act.

(4) Southwestern's FPC Rate Schedules Nos. 14 to 49, inclusive, and 52, as supplemented, and the services rendered thereunder, are subject to the jurisdiction of the Federal Power Commission within the contemplation of Section 205 of the Federal Power Act.

(5) The rates and charges made, demanded and received by Southwestern for and in connection with the transmission and sale of electric energy transmitted, sold and delivered by Southwestern under and pursuant to Southwestern's FPC Rate Schedules Nos. 36, 37, 38, 39, 40, as supplemented, 41, 42, 43, 44,

---

[14] Although deliveries to the Cooperatives are made at voltages ranging from 2.4 kv to 115 kv, the same range as for the three investor-owned customers, the rate schedules available to the Cooperatives do not contain a delivery voltage adjustment clause.

45, 46, 47, as supplemented, 48, 49 and 52 are just, reasonable and lawful; and the disparity between such rates and those hereinafter found to be just and reasonable for the services which Southwestern renders to New Mexico Electric, Community and to Cochran pursuant to Southwestern's presently designated FPC Rate Schedules Nos. 14, 17, 15 and 34, as supplemented, respectively, is not unreasonable and does not subject any person to undue prejudice or disadvantage within the meaning of Section 205(b) of the Federal Power Act.

(6) A reasonable rate of return for use in the determination of Southwestern's cost of service for the period adopted as the test year in this proceeding is 6 percent per annum.

(7) Southwestern's cost of service rendered to New Mexico Electric, Community and Cochran under Rate Schedules 14, 15, 17 and 34 arrived at by the application of the rate of return found reasonable in Finding (6) to the rate base employed by Southwestern, reduced however by its liberalized depreciation accruals, and adjusted to include cash working capital, was for the test period, $1,568,632.

(8) The revenues derived from the rates and charges made, demanded and received by Southwestern under its FPC Rate Schedules Nos. 14, 15, 17 and 34, as supplemented, during the test period herein exceeded the cost of the services rendered thereunder as found in Finding (7) by $568,464.

(9) The rates and charges made, demanded and received by Southwestern for and in connection with the services which it renders to New Mexico Electric, Community and Cochran under its FPC Rate Schedules Nos. 14, 17, 15 and 34, as supplemented, respectively, were, during the test period, excessive in the amount of $568,464 and, consequently, were unjust and unreasonable and, therefore, unlawful.

(10) The rates and charges made, demanded and received by Southwestern for and in connection with the service which it renders to Lea County Electric Cooperative, Inc. under Southwestern's FPC Rate Schedules Nos. 16 and 35 are unjust and unreasonable and therefore unlawful.

(11) Southwestern's FPC Rate Schedule No. 16, supplemented by the new Cooperative rate schedules, would be just and reasonable.

(12) Southwestern's FPC Rate Schedule No. 35, supplemented by the proposed new Cooperative rate REA–1, modified to eliminate the maximum kwh charge but retaining its present minimum billing demand of 4000 kw, would be just and reasonable.

(13) Paragraph (B) of the Commission's order issued herein on May 15, 1962, as amended by the order of June 10, 1963, 29 FPC 1149, should be vacated.

The Commission orders that:

(A) The rates and charges made, demanded and received by Southwestern for and in connection with the transportation and sale of electric energy to New Mexico Electric, Community and Cochran under Southwestern's FPC Rate Schedules Nos. 14, 17, 15, and 34, as supplemented, shall be changed to those shown in Appendix C hereto.

(B) Southwestern shall file within 30 days from the date of this order new schedules of rates and charges for the transportation and sale of electric energy to New Mexico Electric, Community and Cochran in accordance with those set out in Appendix C hereto, and, unless the Commission shall otherwise order, such new schedules of rates and charges shall be effective as of the expiration of such 30-day period.

(C) Southwestern shall file within 30 days from the date of this order new schedules of rates and charges for the transportation and sale of electric energy to Lea County in accordance with Findings 11 and 12 set out above, such new rate schedules shall be effective as of the expiration of such 30-day period.

(D) The Commission reserves the right to reject all or any part of such new schedules and in lieu thereof to prescribe any other schedules which will more nearly accomplish the purposes of this order and prescribe such other schedules by its further order herein.

(E) On and after the effective date of the new schedules of rates and charges filed or ordered in accordance with Paragraphs (B) and (C) above Southwestern shall cease and desist from making, demanding or receiving any other rates and charges.

Appendix A

SOUTHWESTERN PUBLIC SERVICE COMPANY

Cost of service allocated to investor-owned utility customers

(Based on Company's Exhibit No. 12)

Rate base-averaged (includes M & S)	$6,659,684
Liberalized Depreciation Accrual	(66,767)
Net cash working capital	15,173
Rate Base	6,608,090
Operating and maintenance expenses	794,383
Depreciation and amortization expense	183,705
Taxes—other than income taxes	83,082
Income taxes—State	2,103
Income taxes—Federal	108,874
Return at 6 percent	396,485
Cost of Service	1,568,632

APPENDIX C

SOUTHWESTERN PUBLIC SERVICE COMPANY

Rate Schedule No. ——

Electric Power Service to Privately Owned Electric Utilities

1. *Availability*

Available in the territory in which Company operates, to privately-owned electric utilities (Customers) for resale and distribution to those consumers or customers which such Customers serve. Service under this rate schedule is subject to the terms and conditions specified in the contract for electric service in effect between the parties as of the effective date of this rate schedule, provided that the specific provisions of this schedule supersede all similar provisions, if any, contained in such contracts or any present attachments or exhibits thereto.

2. *Character of Service*

Service under this rate schedule shall be firm, and shall be 3 phase, 60 cycle electric energy.

3. *Monthly Rate*

Demand charge:
$1.15 per KW for the first 5,000 KW of monthly billing demand.
$0.95 per KW for all additional KW of monthly billing demand.
Energy charge:
4.1 mills per kwh for all energy delivered during the month.

4. *Measurement of Demand*

The kw of demand shall be determined for the 30-minute period of Customer's greatest use during the month.

5. *Billing Demand*

The billing demand shall be the kw demand for the month, but not less than 60% of the highest demand established in the preceding 11 months.

6. *Power Factor Adjustment*

None.

7. *Fuel Cost Adjustment*

None.

8. *Minimum Bill*

The charge for the billing demand for the month.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON THE LAWFULNESS OF CERTAIN ELECTRIC RATE SCHEDULES FILED BY THE SOUTHWESTERN PUBLIC SERVICE COMPANY FOR RENDERING WHOLESALE SERVICE TO INVESTOR-OWNED CUSTOMERS AND TO COOPERATIVES PURSUANT TO SECTION 205 OF THE FEDERAL POWER ACT

(Issued September 1, 1964)

SHRIVER, *Presiding Examiner:* This is a proceeding to determine the lawfulness of certain wholesale electric rates of the Southwestern Public Service Company pursuant to Sections 205 and 206 of the Federal Power Act. It involves alleged undue preferential power rates. The proceeding was initiated by an order of the Commission dated May 15, 1962, 27 FPC 959, which directed that a public hearing be held, that pending such hearing and decision by the Commission 12 rate schedules which had been proffered for filing by Southwestern on March 28, 1962 be suspended, and that Southwestern on or before July 16, 1962 (later extended), file cost and revenue data showing its costs in rendering service to each of its wholesale for resale customers. The Commission's order was brought on by the fact that Southwestern had negotiated reduced rates with 12 of its rural electric cooperative customers, some of which compete with its other customers, investor-owned utility companies. The Commission's order required, among other things, that Southwestern file revenue and cost data "calculated in accordance with applicable Commission rulings." Under existing rate schedules previously on file with the Commission, Southwestern had been furnishing wholesale electric service to 3 investor-owned utility companies and to 17 rural electric cooperatives.[1]

On August 16, 1962, the Commission granted leave to intervene to the New Mexico Public Service Commission, and to the Community Public Service Company, an investor-owned utility company.[2] On the same date leave to intervene was also granted to the Lea County Electric Cooperative, Inc., of Lovington, New Mexico, and to 15 of the 17 rural electric cooperatives located in Texas, New Mexico and Oklahoma.[3] On May 22, 1963, leave to intervene was granted to Texas Electric Cooperatives, Inc., an association of rural electric cooperatives.

Hearings were held in Washington, D.C., on December 3, 4, 5, 6, 9, 10, 11, 12, 13 and December 16, 17, 18, 1963, at which time testimony and evidence was taken in the case. Twenty-seven witnesses were heard and more than a hundred exhibits were introduced in evidence. An oral argument was held before the Presiding Examiner on May 5, 1964.

The Southwestern Public Service Company is a New Mexico corporation. It came into being, somewhat as it exists today, in 1942. Except for the water system owned and located in Clovis, New Mexico, it is a wholly integrated operating company engaged in the generation, transportation, distribution and sale of electric energy. As of December 31, 1962 (the test year for this proceeding being 1962), it had a service area of approximately 45,000 square miles comprising a portion of Morton County, Kansas, the Oklahoma and Texas Panhandle regions, the South Plains area of Texas, the Clovis-Portales region of eastern New Mexico, and the Pecos Valley area of Eddy and Clovis Counties, New Mexico. Its electric transmission facilities interconnect with those of the west Texas Utilities Company (66 kv at Shamrock), the Texas Electric Service Company

---

[1] Southwestern's investor-owned utility customers, and rural cooperative customers with respective schedules by numbers are listed in Appendix A hereto.

[2] Southwestern's two other investor-owned utility customers, New Mexico Electric Service Company and Cochran Power and Lighting Company, did not petition to intervene.

[3] The names of these cooperatives are as follows:

Bailey County Electric Cooperative, Inc., Muleshoe, Texas, *et al.*; Swisher County Electric Cooperative, Inc., Tulia, Texas; Central Valley Electric Cooperative, Inc., Artesia, New Mexico; Tri-County Electric Cooperative, Inc., Hooker, Oklahoma; South Plains Electric Cooperative, Inc., Lubbock, Texas; Roosevelt County Electric Cooperative, Inc., Portales, New Mexico; Rita Blanca Electric Cooperative, Inc., Dalhart, Texas; North Plains Electric Cooperative, Inc., Perryton, Texas; North Fork Electric Cooperative, Inc., Sayre, Oklahoma; Lyntegar Electric Cooperative, Inc., Tahoka, Texas; Lighthouse Electric Cooperative, Inc., Floydada, Texas; Lamb County Electric Cooperative, Inc., Littlefield, Texas; Greenbelt Electric Cooperative, Inc., Wellington, Texas; Farmers Electric Cooperative, Inc. of New Mexico, Clovis, New Mexico; and Deaf Smith County Electric Cooperative, Inc., Hereford, Texas.

The Pioneer Cooperative Association, Inc. of Ulysses, Kansas, another cooperative customer of Southwestern, did not purchase electric energy from Southwestern in 1962 and did not intervene in these proceedings.

(13.5 kv at Denver City, Texas) and by way of emergency connection with the Pioneer Cooperatives Association (at north Elkhart, Kansas).

Southwestern as of December 31, 1962, had a generating capacity of 971,500 kw in 12 steam-electric generating stations and 6,300 kw in internal combustion engines. In the same year, at the output of power supply, Southwestern's system peak demand was 848,845 kw, and the sum of the maximum noncoincident demands on its system was 1,088,400 kw. Since 1962, it has installed a 10,000 kw gas turbine and has an additional 400,000 kw of generating capacity under construction. A new 200,000 kw generating unit now under construction is scheduled to be placed in service in the spring of 1964, and another in the spring of 1965. Its current load growth is about 70,000 kw annually. By the end of 1962, it provided service to 213,588 customers.

The backbone of Southwestern's transmission system operates at 115,000 volts, but major sections of its system have been constructed for operation at 230,000 volts. By the end of 1962, Southwestern had 4,159 circuit miles of 22,000 volts or higher lines. It also has a series of 66 kv, 44 kv, 33 kv, and 22 kv transmission lines.

The major portion of Southwestern's business is retail in character. In the aforementioned service area, it makes sales at retail in 126 cities and towns in Texas, New Mexico, Oklahoma and Kansas. As to these sales 105 are in cities and towns in Texas (including Amarillo, Lubbock, Plainview, Hereford, Post and other cities, towns and villages); 12 are in New Mexico (including Clovis, Artesia, Roswell and Carlsbad); 8 in Oklahoma (including Beaver, Boise City and Guymon); and 1 is in a municipality in Kansas, namely, Elkhart.

Its retail customers include oil companies, carbon black plants, potash mines, cotton gins, and grain elevators. For the year 1962, Southwestern's total electric revenues amounted to $60,824,794. Southwestern's sales of electric energy in 1962 totalled 4,165,860,508 kwh. Approximately 77.41 percent of Southwestern's sales of electric energy in 1962 consisted of direct sales or retail business. The balance of its electric energy of approximately 22.59 percent was sold for resale as follows:

(1) Approximately 15.83 percent to 15 rural electric cooperatives listed above (Footnote 3) which purchased their entire resale requirements from Southwestern;

(2) Approximately 0.40 percent to the Lea County Electric Cooperative, Inc., representing stand-by service (Lea County having its own generating plant);

(3) Approximately 0.95 percent to the Community Public Service Company, a private utility, for distribution in Hansford, Lipscomb and Ochiltree Counties;

(4) Approximately 5.17 percent to New Mexico Electric Service Company for distribution in Lea County, New Mexico; and

(5) About 0.24 percent to Cochran Power and Lighting Company for distribution in Morton and Whiteface, Texas.

The three latter companies, namely, Community, New Mexico Electric and Cochran Power are private utility companies. As indicated above, New Mexico Electric and Cochran Power have not intervened in the present proceeding. It should also be observed that Southwestern's direct sales (77.41 percent) are not made in interstate commerce and are outside the Commission's regulatory jurisdiction. Southwestern's direct sales, however, are subject to regulation by the states and municipalities where such sales are made. It is the sales to the private utilities and to the cooperatives which are directly involved in this proceeding.

During the spring of 1962, Southwestern negotiated a new rate schedule with 12 of its cooperative customers and with 3 others of later date, reducing their rates. These cooperatives purchase all their required energy from Southwestern. By the terms of the new schedule, the over-all cost of the energy purchased would be reduced a little more than 2 percent below what was payable under the preexisting schedules. Twelve of the cooperatives initially executed contracts accepting the revised schedules and Southwestern proffered the revised schedules to the Commission for filing on March 28, 1962. Thereafter, or during the pendency of this hearing, new schedules for the three cooperatives, North Plains, Rita Blanca and Tri-County Electric were proffered and have been accepted by the Commission for filing.

The Community Public Service Company is incorporated in the State of Texas, and maintains its principal offices in Fort Worth. As contrasted with Southwestern, Community serves five noncontiguous areas, four in widely separated regions of Texas and one in New Mexico. As of December 31, 1962, Community served approximately 91,160 customers, and an estimated population of 266,000 persons.

In 1962, it purchased 1,321,780,547 kwh and generated 94,757,035 kwh, or less than 7 percent of its needs. Community's total electric operating revenue for the year 1962, was $20,874,241. One of the five areas of Community's operations is located on the northern border of Texas, in the Panhandle, and includes the Counties of Hansford, Ochiltree and Lipscomb. All the electricity needed for Community's customers in these counties is purchased by it from Southwestern. In this area, Community is in competition primarily with the North Plains Electric Cooperative.

Community receives delivery from Southwestern at 69 kv off the same bus as the cooperative, North Plains Electric at Spearman, Texas. Community also receives service at 115 kv at delivery point No. 2, north of Perrytown, Texas. New Mexico Electric, a private utility which receives most of its energy needs from Southwestern, receives service at three 115 kv delivery points. Cochran, another private utility, receives all its energy requirements from Southwestern at 66 kv and 2.3 kv connections, respectively, at Morton and Whiteface, Texas.

The 15 rural electric cooperatives (hereafter referred to as Cooperatives) operate in New Mexico, Oklahoma, and Texas. They are located in the general service area of Southwestern and render service primarily to the farm and nonfarm customers in Southwestern's geographical region.

Each cooperative is incorporated under state law, is nonprofit, and is member-owned and controlled. Each member has one vote in management. The existence of the cooperatives was made possible by the Rural Electrification Act of 1936 (7 U.S.C. 901 *et seq.*) which authorized the Administrator of the REA to make loans "for rural electrification and the furnishing of electric energy to persons in rural areas who are not receiving central station service." A rural area has been defined as any area not included within the boundary of any city, village or borough having a population in excess of 1500 inhabitants and includes both farm and nonfarm population, and a person is deemed to mean any natural person, firm, corporation or association (Act of May 20, 1936 c. 432, 49 Stat. 1367; 7 U.S.C. 913). Under the REA Act the cooperatives have borrowed money for the construction of lines and facilities at 2 percent interest repayable within 35 years. Since they are nonprofit in character, cooperatives pay no federal or state income taxes. Although each member may be said to have an equity in the cooperative so long as service is received, no dividends are paid. After the payout each member may look to reduced rates. There is no requirement that the earnings of the cooperative be sufficient to cover a return on borrowed capital; the earnings must be enough merely for maintenance and operation and liquidation of the loan.

With the exception of the cooperatives, Lea County, Central Valley, and Pioneer, all the other cooperatives are as previously mentioned all requirements customers and receive service from Southwestern at a large number of delivery points. Fourteen cooperatives receive service at 66 kv at 75 delivery points, and eight are served from Southwestern's sub-transmission network (44 kv—33 kv—22 kv) at 20 points. There are also some minor deliveries to the cooperatives by Southwestern at lower voltages at several points. North Plains, in addition to the Spearman delivery receives service at Alhambra (metered at 240 volts) Sub-station, Texas, and at Briscoe, Texas (metered at 7.62—13.2 kv). Central Valley is served at 115 kv at Southwestern's Eddy County Switching station in New Mexico. It also receives service at 10 additional delivery points in New Mexico at voltages ranging from 12.47 to 66 kv. Lea County relies upon its own generation for more than 85 percent of its electric requirements and has a power purchase agreement with Southwestern for 15,000 kw stand-by capacity for delivery at 115 kv at Denver City, Texas.

The existing rates, prior to the new filings, under which Southwestern served its cooperative customers were lower than those under which it served its investor-owned utility customers.

Jurisdiction and Classification. Since Southwestern generates electrical energy and sells it at wholesale for resale, it is subject to the jurisdiction of the Federal Power Commission. (Section 201). Section 205 of the Act provides among other things that all rates and charges of a public utility subject to the Commission's jurisdiction shall be just and reasonable, otherwise such rate or charge is declared to be unlawful. Subsection (b) of Section 205, and Section 206(a) provide that:

> 205(b) No public utility shall, with respect to any transmission or sale subject to the jurisdiction of the Commission, (1) make or grant any undue preference or advantage to any person or subject any person to any undue prejudice or disadvantage, or (2) maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.
>
> 206(a) Whenever the Commission, after a hearing had upon its own motion or upon complaint, shall find that any rate, charge, or classification, demanded, observed, charged, or collected by any public utility for any transmission or sale subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order.

The principal issue in this proceeding is whether the private utility customers and the rural electric cooperative customers of Southwestern belong to the same class so that in the sale of energy to these customers, Southwestern is required by the terms of Section 205 to furnish such energy to each group of customers at the same or substantially the same rate.

There is no contention in the case that Southwestern's rates to the private utilities and to the cooperatives are the same. Fifteen of the cooperatives, however, are served at the same rate. Lea County receives limited and stand-by service and is served at a different rate than the other cooperatives but each of the 3 private utilities are served at a different and higher rate than that charged the 15 cooperatives. The cooperatives pay a demand charge six months out of the year, the utility companies pay a demand charge for twelve months. The cooperatives are not charged for any fuel adjustment and their new contracts contain a ceiling price provision of 7½ mills per kwh per annum. The utility companies have no such ceiling in their rate schedules.

Southwestern serves both Community and North Plains and the rate of the former is admittedly higher.[4]

Southwestern says that the cooperatives constitute a distinct class, that generally they purchase electric energy for resale to rural areas, whereas the energy purchased by the private utilities for resale is for distribution to urban areas, and that even though the rates charged the cooperatives are lower the difference does not constitute an undue or unreasonable discrimination or preference. Although it is true that the electric energy purchased by the cooperatives is for resale to rural areas, they do not sell in such areas to the exclusion of the urban, nor is it a fact that the private utilities sell only in urban areas. Community and New Mexico Electric in particular sell in rural areas. In recent years some of the cooperatives have acquired loads that formerly were to be found only in or near urban centers. Accordingly, the cooperatives do not constitute a distinct class based alone on the fact that they purchase electric energy for resale in rural rather than urban areas.

Southwestern argues that the cooperatives constitute a separate class because singly or together they can themselves generate and transmit energy to themselves and other cooperatives and in so doing have the same subsidies as in the construction of their distribution lines. This is tantamount to saying that the cooperatives fall in a separate classification because they temporarily possess the economic power to gain an advantage in rates. The fallacy in this argument is apparent. Of course it may be said that Southwestern would not agree to sell energy to the cooperatives at less than cost, but if this argument is carried to its logical extreme it might do so, provided it could realize an over-all profit from its retail customers and other wholesale customers. Thus, although the threat to provide their own generation is a legitimate business bargaining device, it is not a legitimate basis for a class distinction.

The fundamental basis for any difference in classification is a difference in cost or variation of service. Customarily, extreme variations in quantity, customer location, density of customers, and wide range in load factor justify a different classification. But these distinctions have more force in respect to retail than to

---

[4] See the following table:

North Plains, F.P.C. Schedule No. 49	*Community, F.P.C. Schedule No. 17*
Demand Charge $1.725 per kw demand per month, including 100 kw for each kw of demand. [Demand charge does not apply during months of Jan., Feb., Mar., Oct., Nov., and Dec.]	*Demand Charge* $370 for first 200 kw, or less, of demand per month; $1.25 per kw for the next 1,800 kw of demand per month; $1.15 per kw for all additional kw of demand per month.
Energy Charge 5 mills per kwh for all kwh per month in excess of 100 kwh per kw of demand. [During the months of Jan., Feb., Mar., Oct., Nov., Dec., the 5 mills per kwh charge shall apply to all energy used during such month.] *Note:* North Plains has option of being billed at 4.6 mills per kwh subject to fuel adjustment based on heat rate of 15,000 Btu per kwh. Maximum Annual Bill 7.5 mills per kwh.	*Energy Charge* 7.5 mills per kwh for first 200 kwh used per month per kw of demand, or the first 80,000 kwh used per month whichever is greater; 5.0 mills per kwh for all additional kwh used per month. Energy charges subject to fuel adjustment based on a heat rate of 20,000 Btu per kwh.

wholesale rates. The primary considerations in classification in respect to wholesale rates is the quality of service, type, and cost of the service rendered.

Both the cooperatives and the private utilities receive service from Southwestern at voltages ranging from 115 kv to 2.3 kv. Some of the cooperatives and private untilities take deliveries directly from the power supply; other cooperatives and private utilities take delivery from the 66 kv or sub-transmission network. Three-phase service is made available by Southwestern both to the cooperatives and to the private utilities at convenient points where the service is required. Southwestern's customers whether they be cooperative or private companies buy energy in bulk and own their operating facilities for selling and distributing energy to their respective customers. To be sure there are some differences among the cooperatives and the private utilities as to load factor and the quantity of energy purchased. These differences under the circumstances in this case are insufficient to support a separate classification.

None of Southwestern's customers are alike in all respects, particularly the private utilities as contrasted with the cooperatives. But they are not so unlike from the standpoint of service received from Southwestern as to justify a separate classification for rate making purposes. The existing rates under which Southwestern supplies energy to the cooperatives result largely from the fact that the cooperatives bargain as a unit to secure lower rates. Accordingly, it is of significance that Southwestern's President testified on rebuttal that strict adherence to cost as the sole consideration in wholesale rate making might result in one rate level for all wholesale purchasers. If service is to be rendered pursuant to contract some bargaining is inevitable, but to establish rates primarily by the bargaining process necessarily leads to discrimination which in the past gave rise to administrative agencies and Government regulation. *Otter Tail Power Company*, 2 FPC 134, 142 (1940).

The Cooperatives urge that they are entitled to a special rate classification by virtue of the fact that they are set up under the REA Act and are nonprofit organizations. Counsel for the Cooperatives contend at length that the social and economic conditions which led to the enactment of the REA set the cooperatives apart thereby enabling them to bargain for the lowest possible wholesale rates dehors discrimination. It cannot be denied that a cooperative has but little in common with a profit making corporation, but this is not to say that the cooperatives here fall in a separate classification when dealing with a public utility subject to the provisions of Sections 205 and 206 of the Federal Power Act, and when such classification would result in injury and undue discrimination in respect to one wholesale customer as opposed to another. It could hardly be contended, for example, in this proceeding that the cooperatives should be free to bargain for as low rates as possible if, for example, 10 percent of Southwestern's sales were retail, 60 percent were made to investor-owned companies, and 30 percent to the cooperatives. The result in such a situation might well be that the customers of the investor-owned companies would be required to pay for a large portion of the energy furnished to the consumers of the cooperatives. A mere difference in corporate form does not justify a separate classification for the cooperatives for comparable service.

The Cooperatives further urge that since they must construct, maintain and operate many miles of lines through sparsely settled rural areas with consequent line losses and other increased costs, they represent a distinct special classification of wholesale customers. It is also argued that the legislative policies of the Federal and state governments support a special classification. As to the latter, there is nothing in the REA Act which clearly manifests this contention. As to the former contention, it is merely an acknowledgment of the character of the cooperatives to say that they must construct, maintain, and operate in sparsely settled rural areas. But it must also be acknowledged that they are no longer wholly confined to such operations.

No one can doubt that electric power would have been made available to rural areas without legislative assistance or that there were numerous economic and social factors considered by Congress in enacting the REA Statute. Although it is not a matter for appropriate consideration in this proceeding, it should not be forgotten that many of the factors now pressed by the cooperatives were taken into account by Congress and they resulted in the low interest rates, tax advantages and other benefits contained in the REA Act. Congress did not see fit, however, in enacting that Statute to make any reference to the Federal Power Act or to make provision for the classification of the cooperatives under it.

In a brief or Statement of Position of the Administrator, Rural Electrification Administration, filed at the hearing, the Administrator indicated that during the fiscal year 1962 the REA financed systems purchased 13 billion kw hours of electric energy from utility companies at a cost of $100,000,000; that power costs of REA financed distribution cooperatives which served almost 5 million customers in 1962 represent more than 44 percent of their operating costs, and that the ability of these cooperatives to continue to provide abundant supplies of electricity in rural areas at reasonable rates depends in large measure on their ability to keep their costs of power at the lowest possible level. Although the Table of Contents of this Statement is headed, "Why Cooperatives are Entitled to a Separate Wholesale Electric Rate Classification," much of the Statement is devoted to the progress and problems of the REA cooperatives, the social benefits of rural electrification, the efforts of the cooperatives to secure wholesale rates, and the results achieved in negotiating reduced rates. The Federal Power Act provides that "No public utility shall . . . grant any undue preference . . . or maintain any unreasonable difference in rates either as between localities or as between classes of service, etc." The Administrator's Statement, however, makes no reference to the Federal Power Act or its applicability to utilities serving cooperatives.

The issues confronting the cooperatives in the proceedings before the state commissions in obtaining power and in securing wholesale rates are unlike those in the present case, and the many cases cited by the Cooperatives as well as Southwestern are not decisive here. This is not to say that cooperatives generally must always fall in the same class as other wholesalers for resale, but in the present case they are not so unlike Southwestern's other customers as to service received and comparability as to justify a separate classification. In the instant case the cooperatives are served by Southwestern at the same wholesale rate and they in turn serve not merely the farm and rural demands but industrial and other retail customers similar to those served by the private utility companies. Based on the record and evidence it is concluded that there is no sufficient factual or legal basis for a separate rate classification for the cooperatives.

Discrimination. The Commission's order of May 15, 1962, states in part:

> Southwestern's proffered rate schedule changes, as designated above,[5] would decrease Company's present rates to the twelve Cooperatives concerned by approximately $79,639 (2.08%) per annum for the twelve customers based upon estimated 1962 deliveries of power and energy. For the twelve-month period ending December 31, 1962, Southwestern's revenues from those cus-

---

[5] See Appendix A and the Commission's Order Instituting Investigation of Southwestern, issued May 15, 1962.

> tomers under present rate schedules are estimated to total $3,820,507. Based upon the same estimated deliveries, Southwestern's operating revenues under the proposed rates would be $3,740,868. The reduction would be accomplished through elimination of fuel adjustment clauses, establishment of a maximum annual average bill of 7.5 mills per kwh; and an increase of .4 mill per kwh in Company's present energy charge.
>
> Review and analysis of available office data indicate that certain of Southwestern's Rate Schedule FPC Nos. 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46 and 47, as supplemented and more fully described above, may result in excessive rates or charges; certain of them may place an undue burden upon other of Southwestern's electric utility customers; and some or all of those schedules may be unduly discriminatory, unduly preferential, or otherwise unjust, unreasonable and unlawful within the meaning of the Federal Power Act.

In its petition to intervene of June 13, 1962, the Community Public Service Company alleged rate discrimination against Southwestern. Community's interest in this case, as previously indicated, arises from the fact that it renders electric service in Hansford, Lipscomb and Ochiltree Counties located in the northeastern corner of the Texas Panhandle. North Plains, a cooperative, also renders service in the same counties. Community serves the towns of Spearman (approximately 3,600 population) and Perryton (approximately 8,000 population) and serves communities of less than 1,500 population. It also serves some rural areas extending some 2 to 3 miles on one side or the other of its 115 kv, 69 kv, and 33 kv transmission lines which extend from the Spearman interchange station to Perryton east of Follett and Higgins, and north from Perryton to a 115 kv interconnection with Southwestern to the Texas-Oklahoma state line. As previously stated, North Plains renders electrical service in the three counties served by Community. In addition, it serves the rural areas and outskirts of some of the towns served by Community. It also renders service in the Counties of Hemphill, Roberts, and Hutchinson. The lines of the two electric systems sometimes cross throughout their service areas. The lines of North Plains more or less honeycomb the rural areas while those of Community more generally reach out from its main lines. Until 10 or 15 years ago, the three counties served by both Community and North Plains depended primarily on an agricultural economy consisting principally in the production of grain and livestock. More recently the production of oil and gas has become increasingly more important, and as a consequence Community and North Plains are actively engaged in competition for the electrical loads in this area.

The rates Southwestern charges its investor-owned customers are considerably higher than those charged the cooperatives. Based upon the Staff's cost of service calculations, Southwestern's rate of return for the year ending December 31, 1962, from service rendered the cooperatives was 4.12 percent as compared to rates of return of 11.00 percent from the New Mexico Electric Service Company, 9.50 percent from Community, 6.04 percent from the Cochran Power and Light Company, and 9.14 percent from service rendered to other customers. On a cost of service basis, the Staff concludes that Southwestern had excess revenues of $509,926 on its service to the 3 private utility companies, and $10,688,128 from other customers, but a revenue deficiency for service rendered to the cooperatives amounting to $1,127,703, for the test year 1962. In his direct examination, Southwestern's President, Mr. Watson, testified that his company's pricing policy in respect to the cooperative has always resulted in a less than average system rate of return. On rebuttal, he indicated that his company charges higher than average cost rates for wholesale service to the private companies.

There is little or no difference in the service rendered by Southwestern to the cooperatives as opposed to the 3 private utilities, certainly none as to justify the marked difference in rates. The cooperatives' witness, Van Scoyoc, testified that the cooperatives as a group have a lower purchase power load factor (42.64%) than the private utilities (68.85%). This fact normally would support a higher rate rather than a lower one for the cooperatives. As heretofore indicated both the cooperatives and the private utilities receive three-phase service from Southwestern at voltages ranging from 115 kv to 2.3 kv. Both take service directly from the power supply. Cooperative customers as well as the private utilities receive service from the 66 kv and from sub-transmission networks. Southwestern makes no claim that the service rendered to the cooperatives is secondary or inferior to that furnished to the private utilities.

It is clear from the testimony that Southwestern is earning a higher rate of return from its private utility customers than from the cooperatives (test year), and that this differential is a part of Southwestern's pricing policy. Mr. Watson admitted that the higher rates charged to the private utilities in effect constitute a subsidy in favor of the cooperatives. He testified that the company's stockholders should not be required to carry the burden of the low rates of the cooperatives; that they do not carry this burden, but that Southwestern's other customers (retail and wholesale) bear the burden of paying higher rates. Mr. Watson endeavored to justify the different rates as between the private utilities and the cooperatives by contending that the cooperatives benefited the rural economy which in turn benefited the utilities. But it could also be said that there is necessarily a mutual benefit, a healthy urban economy is beneficial to the rural areas. This is almost self-evident. It does not necessarily follow, however, that Southwestern's service area has improved or that the higher private utility rates are justified because of the low wholesale rates extended to the rural electric cooperatives. These is no sound reason why one class of customers should bear the burden of another. This certainly is not in the public interest, but is contrary to the intent and purpose of Sections 205 and 206 of the Federal Power Act.

It is urged at length on behalf of the cooperatives that there are social and economic reasons which justify Southwestern's lower rates to the cooperatives as opposed to its rates to the utility companies. In support of this contention, the cooperatives introduced considerable testimony at the hearing describing the social conditions in the rural areas in west Texas in the 1930s and 1940s. Evidence was introduced to show that the economy of the area served by the cooperatives had improved since the time when the cooperatives were established and to show that the areas now served by them are presently prosperous. It is argued that this general improvement is attributable to the service of the cooperatives and that the social and economic improvements warrant a lower wholesale rate for the cooperatives. The social and economic conditions which existed in the early '30s provided a sound reason for the legislation under which the cooperatives were established. This is proven by subsequent events. The economic improvement, fortunately, justified the legislation. But it is difficult to see what relevance the economic and social conditions of the '30s now have in this case to determine a proper rate for wholesale electric service.

Southwestern, however, claims that the areas now served by the cooperatives are prosperous and that the economy is based on agriculture, agricultural related industries, gas and oil industries, chemical, mining, and industries related thereto. In respect to some of the cooperatives irrigation accounts for a substantial portion of the electrical load. This is so, particularly in respect to

Bailey County, Roosevelt County Electric, Lighthouse Electric, Lyntegar Electric, Deaf Smith, Lamb County and South Plains. Central Valley serves 2,183 oil loads and Deaf Smith will serve a sugarbeet mill with a load of 1,000 kw in the near future.

Evidence introduced at the hearing discloses that there are wide differences among the cooperatives as to the kwh sales and revenues. Many of them now serve not merely farm loads but large industrial loads. Lea County sells 83.9 percent of its energy for commercial and industrial use. North Plains sells 63.3 percent for this purpose, and four of the other cooperatives sell more than 25 percent for such use. Witnesses for the cooperatives testified that the cooperatives seek to serve not merely the farm loads, but the industrial loads as well which are now springing up in the rural areas.

But notwithstanding the foregoing, it is contended on behalf of the cooperatives that their financial condition is somewhat precarious, that the repayment of the loans made to them by the REA and their successful operation would be seriously jeopardized if the cooperatives are not permitted to freely negotiate low wholesale rates. This contention however, is not borne out by the testimony and the evidence. Although the financial condition of the cooperatives vary their financial stability is rather sound. The Monthly Financial and Statistical Report for December 31, 1962, which is filed by each cooperative with the REA, shows a substantial amount of accumulated patronage capital. These reports show for the year 1962 that although the cooperative, Rita Blanca, had but $29,241 in this fund, only one other cooperative had less than $100,000 and eight others had more than one half million dollars, two of which had more than $3,000,000 in accumulated patronage capital. The managers of the cooperatives testified that although these capital credits are distributed to the members on the books, they are available for use by each cooperative to meet operating expenses, debt payments, or any other emergency expenses that might arise. They also testified that the funds of some of the cooperatives are invested and in some cases are earning more than 2 percent, the rate the cooperatives pay the Federal Government on REA loans. In considering the cooperatives' financial condition, it is not without significance that the smaller and weaker cooperatives have the same wholesale rate as the others. Mr. Watson of Southwestern testified that he was opposed to giving a lower rate to some of the cooperatives, the weaker ones as opposed to others. Mr. Forrest, Chairman of the Cooperatives Power Procurement Committee, testified that the cooperatives are now well managed and could stand on their own two feet.

Although Southwestern ascribes several reasons for its lower rates to the cooperatives, and the cooperatives would justify them on social and economic grounds, the basic reasons for the lower rates are that the cooperatives negotiate as a group, and they threaten to generate their own energy. This is rather manifest from the fact that past rate reductions usually have followed surveys or actions by the cooperatives looking to the establishment of their own generating facilities. The Community Public Service Company purchases almost all its energy and possesses no cheaper source of supply than Southwestern. Thus value of service becomes the chief criterion for Southwestern's wholesale rates to Community. This formula puts the wholesale purchaser largely at the mercy of the seller and is inimical to the interests of the public and the consumer. It has heretofore been rejected by the Commission and accordingly must be rejected here. *South Carolina Generating Company*, 16 FPC 52, 56–59. Similarly, a rate based on bargaining cannot be sanctioned. As was said in the South Carolina case at page 58:

> If we were to approve the rate contained in the contract solely upon the basis that the two contracting utilities have struck a bargain, and that one

> of the parties would cancel the contract unless we did approve it, we would be remiss in our duty to protect the ultimate consumer. Such a rationale could lead only to approval of all contract rates irrespective of the public interest involved contrary to the provisions and purposes of the Federal Power Act.

As previously indicated, Southwestern serves the Community Public Service Company and North Plains at its Spearman Interchange Station at 69 kv from a common bus. This service accordingly can be said to be identical. Although Community renders electric service to rural areas, villages, and towns in the Texas Panhandle, all the communities served except for Spearman and Perryton have a population of less than 1,500 and might be classified as rural areas within the definition of the Rural Electrification Act. 7 U.S.C. 913.

It is manifest from the record evidence that Southwestern renders substantially the same service to the cooperatives as it does to its private utility customers. It is evident that although there are differences between the cooperatives, and as between the cooperatives as a group and the private utility companies, these differences are insufficient to separate the cooperatives from Southwestern's other customers as a distinct class. The evidence also shows that Community is at a distinct disadvantage in competing with the cooperative, North Plains, for industrial and oil well loads, that in recent years Community has lost numerous oil field loads because its rates were higher than those offered by North Plains, and accordingly, it has been unable to offer the same retail rates as North Plains because of the higher wholesale rates paid to Southwestern.

At the hearing, Community's witness, Mr. Stout, testified as to what Community would have paid Southwestern for purchased power for the years 1961, 1962, and the 12-months period ending June 30, 1963, had Community paid Southwestern the rate it charged North Plains (FPC Schedule 25) rather than at Community's existing rate (FPC Schedule 17). His computation was based on the cooperatives' rate before the new filing. He estimated the amount for 1961 at $231,219.49; for the year 1962 at $261,221.72; and for the 12 months ending June 30, 1963 at $274,966.46. As opposed to these computations the amounts paid by Community for the respective years were: 1961—$319,583.97; for the year 1962—$358,190.78 and for 1963—$377,672.46. He testified that the rate paid by Community was about 37.4 percent higher than the rate paid by North Plains. This disparity would be increased by the new filing.

It is evident from the testimony that whatever the social and economic reasons may have been for the establishment of the cooperatives, and whatever their present needs may be for cheap energy, it is clear that these considerations do not justify Southwestern's disparity in rates as between the cooperatives and its private utility customers.

In the recent case of *Wisconsin Michigan Power Company*, Docket No. E-7026 (Opinion No. 432), 31 FPC 1445 at pp. 1450, 1451, the Commission stated:

> In Gulf States Utilities Company the basic test to be used in construing Section 205(b) was stated as follows:
>
> Proper practices and avoidance of undue discrimination requires, except in unusual cases, that once a new rate is adopted by a company it be made available and applied uniformly to all customers of the same class at the same time.
>
> We elaborated upon this test in *Otter Tail Power Company* by indicating that the proper scope of inquiry under Section 205(b) would take into account whether "the same kind of service under substantially similar conditions is rendered" to each of the wholesale customers, and whether

> differences in rates might be justified by "substantial lawful differences in cost of service or operating conditions." Section 205(b) thus does not prohibit all rate distinctions but only discrimination as between customers of the same class, and then only undue discrimination—that which is not justified by differences in cost of service, operating conditions or other such considerations.

In applying these principles to the facts in this case it must be concluded that Southwestern's policies and practices disclose undue discrimination as between the wholesale rates at which it sells energy to the cooperatives as compared to the rates at which it sells to its public utility customer, Community Public Service Company. As noticed above, the disparity before the new filing for the year 1963 amounted to more than 37 percent. This is not a nominal difference, but is so substantial as to be injurious to Community.

The mere fact that Southwestern supplies energy to the cooperatives at a lower rate than to its private utility customers is discriminatory provided they are in the same class. Southwestern admits that the rates are lower and that it is its policy to extend lower rates to the cooperatives. The evidence shows that the difference in rates is substantial, and that as a consequence Community is unable to compete with the cooperatives for industrial loads. The evidence also shows that the service rendered by Southwestern to the cooperatives is comparable to that rendered to its private utility customers. Under the circumstances it necessarily follows that unless Section 205 of the Federal Power Act is rendered meaningless, the practice of Southwestern must be regarded as unduly discriminatory.

But the Cooperatives contend that the Commission has no authority to make a valid finding that the rates to the cooperatives are unduly discriminatory because it lacks authority to order any rate increase. Cooperatives cite *El Paso Natural Gas Company*, 13 FPC 421, 454 (1954) in support of their contention. This contention, as well as the decision cited is based upon Section 5(a) of the Natural Gas Act. The Cooperatives' contention must be rejected for the reason that the Federal Power Act contains no prohibition as is contained in the Natural Gas Act. In addition, the argument advanced has no applicability here since the Commission's jurisdiction runs to the wholesale seller, Southwestern and its rates, rather than to the purchaser.

Allocation. In order to determine a cost of service for more than one customer or for a group of customers it is necessary to make an apportionment of the total costs. As it is applicable to electric utility costs, it is commonly said that this in turn involves three processes: (1) functionalization or the grouping of costs for costing purposes of the plant and facilities as for example, generation, transmission, and distribution; (2) classification of the power pool costs as either demand or energy; and (3) the allocation of costs—the division of the classified costs between respective customers.

In this case, Southwestern and the Staff placed the same transmission facilities and properties in the "power supply" category. This category included generally Southwestern's generating plants, the step-up transformer stations at those plants, and the principal transmission lines, mostly 115 kv which function primarily to interconnect the generating plants and to tie them to the same bus. The cooperatives accepted the specific property assignments made by Southwestern with the exception of the assignment to the retail category of several internal combustion generating plants.

Mr. Lewis Johnson who testified for Southwestern stated that the second category, "common transmission," is the portion of the transmission system which is in common use serving both wholesale customers and other customers.

The third term or category in Mr. Johnson's classification, *i.e.*, "specific," includes items of property which serve any group of customers, cooperatives, private utility companies, or others which are not in joint use.

To arrive at the power supply capacity costs for Southwestern's customers, Southwestern utilized the average and excess method of allocation, the cooperatives utilized the noncoincidental peak method, and the Staff employed coincident and maximum noncoincidental demands. The parties also assigned different percentages of Southwestern's fixed costs on the basis of demand allocation factors. Southwestern allocated 100 percent, the cooperatives 50 percent, and the Staff approximately 80 percent, to all fixed costs in proportion to demand allocation factors. Staff witness Roland testified that demand use should be the primary consideration in the allocation of fixed costs.

In its brief, Southwestern says that it is necessary that its allocation of properties and expenses be a fair one and fair to all classes of customers; that its wholesale sales are subject to regulation by the Federal Power Commission, and its resale sales in New Mexico, Oklahoma and Kansas are subject to regulation by the regulatory commissions of those states. Accordingly, it says that it is of extreme importance to Southwestern that the allocation between wholesale and resale sales be made with the utmost exactitude in order that it could be used not only in this Commission but also when applicable in considering the reasonableness of Southwestern's retail rates in Texas, New Mexico, Oklahoma and Kansas.

Southwestern says that a cost analysis furnishes one but only one of the considerations which enter into the determination of revenue requirements; and that the sole function of a cost analysis is to determine respective cost responsibilities. Its witness, Johnson, testified that the generation and transmission properties should be allocated in accordance with the loads imposed upon the system—the contribution to the system load by each class of wholesale customers and the contribution by Southwestern's retail customers, considered as if for another purchaser. Accordingly, physical properties of the company were allocated or assigned to three categories; namely, (a) power supply, which refers to the steam electric generating stations of the company and the portion of the transmission system which serves to interconnect those stations to form a single integrated power supply, (b) common transmission—which includes the portions of the transmission system which are in common use for serving both general wholesale customers and other customers within specific areas, and (c) specific—which includes items of property which serve any one group of customers, cooperatives, private companies, or others (retail sales) which are not in joint use. Mr. Johnson said the "Common Transmission lines are radials or loops which bring in power from power supply to local load centers; their primary function is other than the interconnection of the steam-electric stations." Southwestern then determined whether costs attributable to demand should be measured by the demand imposed on the system by the cooperatives, private companies and other loads on the system coincidental peak or by the noncoincidental peaks of the cooperatives, private companies and other loads, respectively. Mr. Johnson concluded that under the conditions which exist in Southwestern's system it was reasonable and preferable to use noncoincidental peaks. He then considered the noncoincidental peaks of the various purchasers at the many connecting points during the year, separated as to States and voltage. He was of the opinion that the allocation factors for use in allocating the power supply plant of Southwestern's system should be developed on the basis of the "average-and-excess" method of demand allocations, a method commonly used to recognize diversity in the determination of demand responsibility. He testified that the average-and-excess method is appropriate, that common transmission on the other hand is essentially local in character; that a line which serves the cooperatives rural loads, in many instances also serves Southwestern's substations, which deliver power to rural areas having similar characteristics; and that individual common transmission lines have relatively few loads connected to them. He stated that under these conditions there is less opportunity for diversity and the diversity which is realized is less reliable than that realized under the averaging process that occurs when hundreds of loads are served from a joint-use facility. He considered that the average and excess method of allocation was appropriate for use in power supply but not appropriate in common transmission. Mr. Johnson testified that "certain of the power supply expenses in steam power generation are energy related; that is to say the incidence of expense is a function of energy rather than of demand." He testified further that certain maintenance expenses which are influenced by the output of the plant over a period of time are energy related; and that the remaining expenses of operation and maintenance of steam production, not to be influenced by energy output but to be related to readiness to serve and, therefore, to be demand related. Having obtained the demand-related factors applicable to common transmission, the demand-related factors applicable to power supply, and the energy related allocation factors related to power supply, those factors were utilized in allocations of cost of properties and expenses of operation in order to secure the dollar amounts of investments in operating costs attributable to the wholesale business of Southwestern and divided between the cooperatives and the private companies. Accordingly, production plant costs of $24,735,385 were assigned to the cooperatives, $6,114,604 to the private utility companies, and $92,206,947 to "other."

It is evident that Southwestern incurs greater costs in furnishing electric service at lower voltage or through its own substation and transmission facilities.

Although objection may be taken to the testimony of Southwestern's witness Johnson on minor matters, no serious criticism is justified on his testimony as a whole. But it is pertinent to note that the allocation of costs to wholesale customers without regard to delivery voltages, or to whether service is provided by a substation of Southwestern or of a customer-owned substation, tends to impose undue costs on the private utilities. In addition, the load factor of the cooperatives is lower than the retail loads notwithstanding that the proportionate contributions to diversity by the cooperatives and the higher load factor retail customers are virtually the same. One of the results of the use of the average and excess demand method of cost allocation accordingly is that lower voltage lines are treated as system-wide properties. Considering the particular facts and circumstances in this case it is concluded that the average and excess demand method of allocating costs utilized by Southwestern is unsuitable and unacceptable.

In classifying Southwestern's fixed costs the Cooperatives' witness, Van Scoyoc, used the so-called Atlantic Seaboard Method (*Atlantic Seaboard Corporation*, 11 FPC 43, 56) and allocated 50 percent to demand and 50 percent to energy. He testified that power supply costs are broadly classifiable between fixed and variable components and then allocated to wholesale and to retail customers on the basis of the responsibilities of those customers for the incurrence of such costs. He said that these costs are not wholly fixed or wholly variable. In explanation of his reason for using the 50–50 formula, he stated "that fixed costs are not incurred solely to supply electric energy for a single hour or half hour or for any other short term period during the year. The costs which have been classified as fixed represent operating costs other than fuel, depreciation, taxes other than income, income taxes, and return. A large share of such costs result from investment in production and transportation facilities and such facilities are used throughout the year as well as during peak periods." He indicated that variable costs include those which vary with energy sales; that fixed costs include those which are dependent on energy sales; and that fixed costs depend largely upon plant investment which in turn depend on capacity of the system.

Mr. Van Scoyoc admitted that fixed costs of a supplier bear a direct proportion to the demand use of the system and that variable costs bear a direct proportion to the energy sold. He was of the opinion that a high load factor customer is more valuable to the supplier because the supplier does not need to build as much capacity in relation to annual use for the high load factor as for the low load factor customer. Notwithstanding these considerations, the witness utilized the 50–50 cost classification formula and endeavored to justify its use essentially, as he said, by Southwestern's financial welfare, his own judgment as to applicability, and because it had been accepted by the Commission in natural gas cases.

The Staff contends that the Seaboard method of classifying fixed costs was conceived in a case in which a natural gas pipeline company had a considerable amount of unused pipeline capacity available for use by off-peak or interruptible customers, and was designed to preclude "free rides," for interruptible customers using that excess capacity. The Staff says that Southwestern unlike the pipeline company in the Seaboard case has no interruptible customers.

In the Cooperatives' cost allocation no distinction is made between customers who own their own step-down substations to obtain service from Southwestern's 115 kv lines and those who obtain service at lower voltages by means of substations owned by Southwestern. Since the costs associated with the supply of large loads at 115 kv through customer-owned substations is less than those associated with the supply of small loads at low voltage service through one or more of Southwestern's substations, the Cooperatives' cost allocation is improper. Whether the 50–50 formula should be applied in a particular case depends on the facts and circumstances. The Commission has sanctioned other allocations in the past without rigid adherence to one method alone. *Pennsylvania Water and Power Co.*, 8 FPC 1, 86; *Public Service Company of Oklahoma*, 25 FPC 656, 662. Demand use should be a primary consideration in allocating fixed costs because it ultimately determines the system's electrical capacity and in turn the fixed costs of the generating and transmission facilities which a supply company such as Southwestern is required to install. In the present case the demand responsibility of the cooperatives is greater than their energy responsibility. To use the 50–50 formula in the present case would result in an undue shifting of costs from the low load factor customer to the high, from the cooperatives to the private utility companies. In view of this and of Mr. Van Scoyoc's own admissions we think it is inappropriate to use the 50–50 formula in this case. It is concluded, therefore, that the facts and testimony of record do not properly support the 50–50 formula and it is accordingly rejected.

In developing its rate base and in allocating a cost to wholesale customers the Staff segregated Southwestern's properties into: (1) power supply, (2) the 115 and 66 kv transmission network (referred to as the 66 kv network), (3) subtransmission network (including 44—33 and 22 kv) facilities, (4) facilities used exclusively for retail service ("Other"), (5) facilities used exclusively for wholesale customers ("Specific"). With this in mind, the Staff adopted three costing levels to indicate that the cost of a kilowatt or kilowatt hour increases as it progresses from the generators through a series of successive lower voltage networks toward the customer's meter.

The power supply system, according to the Staff, includes all of Southwestern's steam electric generating plants, the step-up transformer stations at those plants, and those transmission lines, mostly 115 kv which function primarily to interconnect the generating plants and in effect tie them to the same bus. The 66 kv network consists of transmission facilities, including switching and transformer equipment at the power supply end, used to transmit energy from the power supply system to points of delivery at transmission voltages to wholesale customers and to Southwestern's retail distribution centers. Most of the investment in this category consists of 66 kv facilities, although some 115 kv facilities are included, since the principal function of such 66 kv and 115 kv facilities is to transmit energy from the power supply system to distribution centers and to wholesale customers. The subtransmission network consists of transmission facilities, including switching and transformer equipment at the 66 kv network end, used to transmit energy principally from the 66 kv network to points of delivery at subtransmission voltages to wholesale customers and to Southwestern's retail distribution substations. Some lateral 115 kv lines are used exclusively to transmit energy from the power supply system to Southwestern's retail customers and there are a number of 66 kv and low voltage lines and connecting terminal facilities which are used exclusively to furnish service to retail customers. An example of an exclusively used line is the 9.5 miles of 115 kv line extending from the point at which it taps the 115 kv line extending from the Texas County interchange to the Beaver County interchange in Oklahoma to the Texas-Oklahoma boundary north of Perryton, Texas. The cost of this tap line, $40,000 of which was contributed by Community Public Service Company is charged in its entirety to that company. The 66 kv line extending south from Carlsbad is an example of a line used exclusively for retail service. The 66 kv line extending from Magic City to the Texas-Oklahoma boundary east of Amarillo and is charged entirely to two cooperatives. In his direct testimony, Mr. Roland calculated the gross plant investment as of December 31, 1962 (exclusive of $1,730,897 of completed construction in progress) in each of the five property groupings to be as follows:

	Investment	Percent total
Power Supply	$140,351,481	48.84
66 kv Network	18,132,908	6.31
Subtransmission Network	3,720,167	1.30
Specific to Wholesale	1,333,332	.46
Specific to Other	123,825,620	43.09
Total	287,363,508	100.00

Mr. Roland was of the opinion that demand use should be the primary consideration in the allocation of fixed costs and that the appropriate demand responsibility of the cooperatives and private companies were about midway between their coincident and noncoincident demand ratios. He testified that cost classification and cost allocation techniques must be adapted to, or depend upon the facts of each case. He testified further that the demand factor of the cooperatives is much greater than their energy factor, whereas the reverse is true of the private utility customers and Southwestern's retail customers; or, in other words, that the load factor of the cooperatives is much lower than that of Southwestern's other two customer groups.

The Staff contends that the segregation of Southwestern's common transmission by states results in an excessive allocation of costs to the Community

Public Service Company and that all wholesale customers served at the same costing level should receive similar treatment irrespective of state boundaries. We agree. The Staff's reasons are that only one 115 kv common transmission line is in Oklahoma, and it extends 64.57 miles from Texas County to the Beaver Interchange; that on the basis of maximum demands, some 65 percent of the cost of that line is allocated to Community which is located wholly within the State of Texas. This line supplies 2.98 mw to loads in the State of Oklahoma and 5.74 mw to Community in Texas. The Staff states that:

> A tap line extending 9.5 miles to the Oklahoma-Texas border, where it connects with a Community line continuing to Perryton, Texas, was assigned 100 percent to Community (Tr. 878). Although that portion (31 miles) of the Texas County-Beaver Interchange line extending from the tap line to Beaver is of no benefit to Community, 65 percent of its costs were, nevertheless, charged to Community. If the Texas County-Beaver line had been constructed about 10 miles to the south, it would have been located in Texas. In that case it would have been included, for allocation purposes, with a number of other 115 kv lines in Texas. The Perryton load likewise would have been included with the other Texas loads served from 115 kv lines with the result that much less common transmission cost would have been allocated to Community.

The staff contends that the partitioning in the circumstances in this case results in the allocation of that share of costs to only one instead of to all 115 kv customers in Texas so that Community is allocated excessive costs.

Cost of Service. At the hearing the Staff and the Cooperatives furnished cost-of-service analyses, both on a company-wide basis and as allocated to the wholesale customers, while Southwestern submitted a "Summary of Earnings" relating to the wholesale service only.[6] The parties did not depart appreciably from one another in the amounts each used for plant investment and operation costs. Their differences result mainly from different classification and allocation methods, different treatment of the Federal Income Tax allowances, some difference in rate base elements and a proper rate of return. The Operating expenses (company-wide) of the Staff were less than Southwestern's and of the Cooperatives by $203,748, attributable to a Staff adjustment reducing gross receipts taxes. Each of the parties reflected the plant facilities investment and operating costs as related to the wholesale electric customer of Southwestern for the test year 1962.

The Staff's cost of service of $51,075,574 (company-wide) after undergoing several revisions (Staff Brief, Appendix A, Sheet 2) was allocated to the wholesale customers in the amount of $7,572,000 of which $5,943,920 pertained to cooperative business and $1,628,080 related to the 3 private companies. This analysis reflected an average beginning and year end net investment rate base of $37,660,937, to which a 6-percent rate of return was applied. The Federal Income Tax allowance of $653,923, as allocated to the wholesale business, was computed to conform with Public Law 88–272 and the Commission's Opinion No. 417.

---

[6] Southwestern's Exhibits Nos. 12 and 20, Cooperatives' Exhibit No. 26, and Staff Exhibits Nos. 72, 72–B, and 72–C were the original cost of service exhibits of the parties. However, Southwestern prepared Exhibit No. 21 using an average rate base for comparison with Staff Exhibits No. 72–C, while Staff Exhibits were revised in its brief, in Appendix A, to reflect income tax revisions in accordance with the Commission's Opinion No. 417, 31 FPC 208, and Public Law 88–272, 78 Stat. 19. (Investment Tax Credit.) The revised exhibits of Southwestern and the Staff together with Cooperatives' Exhibit (No. 26) are considered comparable for purposes herein discussed. These exhibits are set forth in attached appendices to this Decision.

The Cooperatives' cost of service ($47,124,777—company-wide), for the test year 1962, was allocated to the wholesale customers in the amount of $4,788,329 relating to the Cooperatives, and $1,531,181, applicable to the private utilities, for a total of $6,319,510 relating to the entire wholesale business. (Exh. 26, Sch. 2, Sheets 1 and 2). The return allowance used was 5.55 percent applied to an average net investment rate base. The Cooperatives deducted from the rate base the average accumulated deferred income taxes of $14,404,828. The Federal Income Tax allowance totals $307,540 applicable to the wholesale customers.

Southwestern's "Summary of Earnings" (Exh. No. 21, Sch. A-1) for the 12 months ended December 31, 1962, shows, among other items, operating expenses, depreciation and amortization expenses, which when totaled amounted to $5,174,980 as assigned and allocated to the wholesale customers for the year 1962. The sum of $3,680,158 of the total so assigned is applicable to the Cooperatives, while $1,494,822 is related to private companies. The rate of return developed on this statement is a realized rate of return earned by Southwestern on its wholesale business only during 1962. This realized return was 4.95 percent (wholesale customers overall) and was obtained by relating the operating revenue of $1,778,333 to the average net investment rate base of $35,932,512. Southwestern's financial witness sponsored a 7.5–8.0-percent overall company rate of return. This statement also shows Federal Income Taxes of $507,016 as the assigned amount to the wholesale business.

The table below contains a comparative summary of the cost of service as assigned and allocated to the wholesale customers:

As assigned and allocated

	Total firm wholesale	Cooperatives	Private utilities
Staff (Appendix A of Brief)	$7,572,000	$5,943,920	$1,628,080
Intervenor Cooperatives (Exhibit 26, Sch. 2)	6,319,510	4,788,329	1,531,181
Southwestern:			
Operating Expenses (Ex. 21, p. A-1)	5,174,980	3,680,158	1,494,822
Return @ 7.5% [1]	2,694,938	2,195,462	499,476
Total	7,869,918	5,875,620	1,994,298

[1] Return was not included as part of a proposed cost of service on Southwestern's Exhibit 21, page A-1, however, for purposes of comparisons above, a 7.5 percent return has been applied to Southwestern's wholesale rate base shown on page A-1.

Federal Income Tax. Southwestern's Federal Income Tax allowance applicable to its wholesale customers is shown at present rates as $507,016 and at proposed rates as $454,131 (Summary of Earnings, Exh. 21, p. A-1, A-2). In its calculation Southwestern used a 52 percent effective tax rate. It also used guideline depreciation and flows through the savings to earned income. It normalized tax deductions arising from use of rapid depreciation expense write off provisions of the Internal Revenue Code rather than permitting the tax saving to "flow through" to benefit the ratepayer. Southwestern makes no reduction from the rate base for accumulated deferred tax balance.

The Cooperatives show a Federal Income Tax allowance for Southwestern on a company-wide basis of $2,233,510 of which $307,540 has been allocated to wholesale service (Ex. 26, Sch. 2). Although this calculation was made using a 52 percent Federal Income Tax rate, the Cooperatives believe a 48 percent rate should be used by Southwestern in the future to conform with the tax rates under the Revenue Act of 1964. The Cooperatives' calculation also reflects "actual" tax expenses (related to 5.55 percent rate of return) with "flow through" of all tax savings. The 1962 investment tax credit was used as a reduction of the tax allowance.[7] (Under Public Law 88–272 this treatment would be optional with Southwestern). Cooperatives also reflected as credits to the cost of service taxes deferred in prior years—these amounts reduced the cost of service by $83.878 (liberalized depreciation) and $608,108 (accelerated amortization). The latter credit substantially reflects the accounting entries Southwestern is recording in connection with "flow through" of this deferred tax accumulation.

In respect to the treatment of accumulated deferred tax balances, the Cooperatives have deducted from the cost of service rate base an amount of $14,404,828 arising from accelerated amortization (Sec. 168) in the amount of $12,631,613, and arising from liberalized depreciation (Sec. 167) in the amount of $1,773,215. The witness for the Cooperatives contends that the $14,404,828 deduction from the rate base gives recognition to the equitable principle that consumers should not be required to pay a return on capital which the consumers furnish to the utility.

The Staff's Brief (Appendix A) reflects revisions made in accordance with the Commission's Opinion No. 417 issued February 3, 1964, 31 FPC 208, and Public Law 88–272, and shows a Federal Income Tax allowance for Southwestern (company-wide) of $3.963,170 of which $653,923 has been allocated to the wholesale business. The Staff used a 52 percent effective tax rate in its original calculation, but in its revision (Appendix A) uses a 50 percent and 48 percent tax rate to conform with the new corporate tax rate under the Revenue Act of 1964. Concerning accumulated deferred Federal Income Taxes, the Staff deducted from the cost of service (company-wide) rate base an amount of $2.263,293 representing accumulated deferred taxes arising from liberalized depreciation. The Staff did not use the accelerated amortization deferred tax balance amounting to over 12 million dollars, as did the Cooperatives as a deduction from the rate base. The Cooperatives contend that the accumulated deferred taxes arising under Section 168 (accelerated amortization) represents collections from customers well in advance of any possible need of the funds for tax payment, and that all of Southwestern's average accumulated deferred taxes (including those applicable to liberalized depreciation) should be deducted in computing the rate base.

The Staff's calculation of the Federal Income tax allowance in the cost of service with "flow through" of the tax savings, and its treatment of accumulated deferred income taxes as related to liberalized depreciation only in reducing the rate base, are proper interpretations of these items in accordance with the Commission's Opinion No. 417. We also adopt the Staff's position regarding normalization of the investment tax credit for rate-making purposes. We do not believe that Opinion No. 417 can appropriately be construed as sanctioning "feed back" of deferred tax balances as advocated by the Cooperatives.

---

[7] Under date of February 26, 1964, and after the record was closed in this case, Congress enacted Public Law 88–272, 78 Stat. 19, which provided in section 203(e) that:

Treatment of Investment Credit By Federal Regulatory Agencies.—It was the intent of the Congress in providing an investment credit under section 38 of the Internal Revenue Code of 1954, and it is the intent of Congress in repealing the reduction in basis required by section 48(g) of such Code, to provide an incentive for modernization and growth of private industry (including that portion thereof which is requested). Accordingly, Congress does not intend that any agency or instrumentality of the United States having jurisdiction with respect to a taxpayer shall, without the consent of the taxpayer use—

(1) in the case of public utility property (as defined in section 46(e)(3)(B) of the Internal Revenue Code of 1954, *more than a proportionate part (determined with reference to the useful life of the property with respect to which the credit was allowed)* of the credit against tax allowed for any taxable year by section 38 of such code * * * to reduce such taxpayer's Federal income taxes for the purpose of establishing the cost of service of the taxpayer or to accomplish a similar result by any other method. [Emphasis supplied.]

Rate Base and Return. The Cooperatives submitted a company-wide rate base for Southwestern of $217,457,925, to which was applied a rate of return of 5.55 percent providing a return in dollars of $12,068,915, which was included in a company-wide cost of service and appears as allocated to the wholesale customers in two amounts—$1,279,981 (Cooperatives) and $381,833 (private utilities) for a total of $1,661,814, as the return applicable to the entire wholesale service (Exh. 26, Sch. No. 4, 2).

The Cooperatives rate base was prepared on a company-wide basis of average balances at year's end for years 1961 and 1962, for plant in service, construction work in progress, accumulated provision for depreciation and contributions in aid of construction. The Cooperatives deducted $14,404,828 from the averaged net plant investment, as representing the average accumulated deferred income taxes. This total is shown (Exh. 26, Sch. No. 4–B) as $12,631,613, being the average accumulated deferred income taxes under Section 168—Accelerated Amortization, and $1,773,215, the average accumulated deferred taxes under Section 167—liberalized depreciation.

Cooperatives' rate base included working capital of Materials & Supplies, Prepayments, cash requirements (⅛ of operating expenses), less a 50 percent Federal Income Tax credit, netting to $2,442,814 (Exh. 26, Sch. 4–C).

The Staff prepared a company-wide rate base for Southwestern amounting to $228,248,104 using the average (for years 1961–62) of items similarly included by Cooperatives, the important single exception being that Staff did *not* deduct the amount of $12,631,613 relating to deferred taxes (accelerated amortization) from its net investment in the rate base (Appendix A to Brief).

Of the company-wide total rate base, Staff allocated to the wholesale service $37,660,937 and applied thereon a 6 percent rate of return, which in dollars amounted to $2,259,656.

Southwestern's Exhibit (No. 21, page A–1) shows a rate base averaged for years 1961–62 of $35,932,512 as applicable to the wholesale service only, of which $29,272,828 is assigned to the Cooperatives and $6,659,684 is assigned to private companies. No deductions for accumulated deferred taxes appears in Southwestern's rate base.

The following table shows a comparison of return in dollars as proposed by the parties:

Dollars of return on Southwestern's rate base at proposed rates of return

(Wholesale service only)

	Total	RECs or Cooperatives	Private Utilities
Cooperatives—5.55%	$1,661,814	$1,279,981	$381,833
Staff—6%	2,259,656	1,861,135	398,521
Southwestern—7.5%	[1] 2,694,938	2,195,462	499,476
Southwestern—8%	[1] 2,874,601	2,341,826	532,775

[1] These *amounts* of return were *not* included by Southwestern as part of a proposed cost of service.

Realized Rates of Return. In its Summary of Earnings, Southwestern shows its realized rates of return from its 1962 wholesale sales to cooperative customers and to the 3 private utility customers on the basis of present and proposed rates.

(Exh. 21). As to *present* rates, the firm wholesale business realized a return of 4.95 percent (operating income as a percent of rate base), of which the return was 3.88 percent from the cooperatives and 9.64 percent from the private companies. If the new *proposed* rates had been in effect throughout the year, the overall return from wholesale customers would have been 4.81 percent, of which 3.71 percent would be realized from sales to cooperatives, and 9.64 percent from private utilities.

The Staff's brief, shows comparable realized rates of return from the wholesale sales. (In Appendix A, Sheet 2). As related to *present* rates this statement shows an overall realized return from the wholesale sales of 5.21 percent, of which the return from cooperative customers is 4.12 percent and that of private companies averages 10.29 percent. At *proposed* rates the realized rate of return from cooperatives drops to 3.88 percent from 4.12 percent shown for present rates. These percentages are tabulated as follows:

Realized rates of return on firm wholesale sales as a percent of rate base

	Present rates	Proposed rates
Southwestern's Exh. 21 [1]	*Percent*	*Percent*
Cooperative Customers	3.88	3.71
Private Companies	9.64	9.64
Total Wholesale	4.95	4.81
Staff Appendix A to Brief [1]		
Cooperative Customers	4.12	3.88
Private Companies	10.29	10.29
Total Wholesale	5.21	5.01

[1] Southwestern's Exhibit 12 and Staff's Exhibit 72-C were the original exhibits showing realized rates of return. Exhibit 21 uses an *average* rather than *year end* rate base. Appendix A to Staff Brief shows latest Staff position inclusive of changes resulting from computing allowable taxes in conformity with Public Law 88-272 and Commission's Opinion No. 417.

Cooperatives' Exhibit No. 26, Schedule No. 1, is applicable only to wholesale sales to cooperative customers during the year 1962. It relates Southwestern's cost of service of $4,788,329 with revenues at *present* rates of $4,815,546 indicating an excess of revenues of $27,217. This cost of service includes a return of 5.55 percent which the Cooperatives state is an entirely fair return on Southwestern's rate base. Therefore, Cooperatives conclude that since Southwestern's wholesale rate to them is yielding a return in excess of the 5.55 percent rate as shown by its exhibit, the return earned is entirely adequate.

Proposed Rates of Return. At the hearing, Southwestern presented evidence to show that it is entitled to a rate of return of between 7½ to 8 percent (which provides from 14.75 to 16 percent on common equity), the cooperatives recommended 5.55 percent (which provides 9 percent on common equity), and the Staff recommended 5.875 percent (which provides 11.04 percent on common equity). In its brief in the light of the Commission's Opinion No. 417 and Public Law 88-272, 78 Stat. 19, the Staff revised its recommendation to 6 percent (provides 11.3 percent on common equity).

Southwestern's witness, Dr. Langum, testified that he based his opinion (return of 7½-8 percent) on the cost of capital for Southwestern, the overall rate of return earned by other electric utilities in Texas, New Mexico and Oklahoma, and on the overall rate of return earned by reasonably comparable unregulated enterprises. In respect to his approach in determining his rate of return, he stated that a regulated enterprise should be afforded the opportunity to earn a rate of return on the value of its property equal to that being earned by other business undertakings with corresponding risks and uncertainties; and that the ability to attract capital and maintain financial integrity must likewise receive consideration as tests of fair return, other than comparable earnings as such only depend on tests of comparable earnings.

In his studies of the cost of capital for Southwestern, Dr. Langum said he used capital structure ratios as follows: long term debt 56 percent, preferred stock 11 percent and common equity 33 percent. He said that the cost of long term debt to Southwestern should be computed at 3.87 percent, influenced largely by its presently imbedded costs on funded debt of 3.58 percent weighed together with probable cost of new issues. He indicated that the cost of preferred stock capital for Southwestern is 4.63 percent, determined by weighing together the imbedded cost of 4.59 percent of Southwestern's present preferred stock with additional issues to be offered in the next few years at about 4.75 percent; that the cost of common stock capital and a reasonable return of earnings on common equity for Southwestern with a common equity ratio of 33 percent lies in the range from 14.75 percent to 16 percent. He said the lower limit of this range is based on the actual rate of return of common equity of 14 comparable electric utilities in Texas, New Mexico and Oklahoma in 1962 without consideration of their much higher common equity ratio. In respect to the overall rate of return achieved by the other electric utilities in Texas, New Mexico and Oklahoma, Dr. Langum said he studied earnings experienced by these utilities from 1957 through 1962, and the medium rate of return was about 7.5 percent and was over 8 percent in 1962. He said the medium rate of return on total capital from 1957 through 1962 was about 7.50 percent and was over 8 percent in 1962. As to the unregulated companies, he determined that a group of 16 was reasonably comparable in risks and uncertainties to Southwestern and that a rate of return for Southwestern of no less than 8 percent was indicated by the rate of return on net assets of such comparable unregulated companies. He said his judgment as to the fair rate of return for Southwestern was based on these considerations.

The original rate of return proposed by Staff witness McGrath was 5.875 percent, which was developed in a cost of capital study showing accumulated deferred income taxes of $14,781,183 ($14,764,663) at 1.50 cost, producing a return of 11.04 percent on common equity. (Exh. 74, page 18). The Staff revised the foregoing, following the issuance of the Commission's Opinion No. 417, proposing finally an overall rate of return for Southwestern of 6 percent. Appendix F hereto, shows the cost of capital reflecting Staff's latest position, containing an 11.3 percent return on Southwestern's common equity. The changes accounting for the increase in common equity return from 11.04 percent to 11.3 percent is attributable to accumulated deferred income taxes being reduced from $14,781,183 to $12,501,370; the difference of $2,279,813 ($2,263,293) of deferred tax accruals, arising from liberalized depreciation, was eliminated in the Staff's revised cost of capital. (Staff Brief, p. 45.)

The Cooperatives took the position that Southwestern should not be allowed an overall rate of return exceeding 5.5 percent for application to an original cost rate base. This would produce a 9 percent return to the common equity (Appendix F).

Cooperatives take a strong position regarding accumulated deferred tax accruals, both as arising from liberalized depreciation ($1,773,215) and accelerated amortizations ($12,631,613) totaling ($14,404,828), proposing that the total of these accruals should be deducted from the rate base. This handling would dispose of any question as to permitting a 1.50 percent rate or any other rate of return on such accruals in determining the cost of capital. Cooperatives' rate base exhibit shows a deduction of $14,404,828 of accumulated deferred tax accruals, and no accruals of deferred taxes are shown in its cost of capital calculations (Coop. Brief, p. 36).

Southwestern's main contention in support of a 7.5–8.0 percent overall rate of return is that a fair return on common equity is governed by the return of other utility companies in Texas and neighboring states, and that the earnings of some 14 such companies support this rate. In this connection it relies on *Bluefield Water Works and Improvement Co.* v. *Public Service Commission*, 262 U.S. 679, 692; *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591, 692; and *Colorado Interstate Gas Co.* v. *F.P.C.*, 324 U.S. 581 As to the cases, there can be but little quarrel with the principles enunciated in them; the test rather is as to the application of the principles. On first sight it is quite plausible to select as a guide other utility companies in the same geographical area as Southwestern—there is an analogy in the law of eminent domain. But on closer examination, it is apparent that Dr. Langum's selection is unsatisfactory for the reason, among others, that it is too restricted geographically. Some of the companies utilized are quite small, other are confined to local operations and have different risks. Southwestern is a medium to large company whose stock is traded on the large stock exchanges.

But if the views of Dr. Langum are unacceptable as to what is a fair and reasonable rate of return for Southwestern those of the Staff witness are not entirely adequate. Mr. McGrath presented a report of "Cost of Capital and Rate of Return Study" and recommended a rate of return of 5.875 percent. He did not testify, however, why such rate was particularly applicable or appropriate for Southwestern. In its brief, the Staff recommended an overall rate of return of 6 percent based on an intervening decision of the Commission. (Opinion No. 417.) After considering the evidence relative to the cost of service, operating expenses, rate base and return, Federal Income Tax allowance, the assignment and allocation of such costs to the wholesale service as submitted by the parties, and the other relevant facts of record, it is concluded that the cost data developed by the Staff as related to Southwestern's wholesale service is to be preferred and accordingly is accepted.

Lea County. Lea County Electric Cooperative relies upon its own generation for more than 85 percent of its energy requirements. It serves a rural area of some 4,000 square miles, as well as the City of Lovington having a population of about 10,000 persons. Lea County serves about 3.04 customers per mile. It has an agreement with Southwestern for the purchase of 15,000 kv stand-by capacity for delivery at Denver City, Texas, at 115 kv. Lea County says that for the years 1959, 1960 and 1961, it paid the same rate to Southwestern as the other cooperatives except for a minimum demand charge of 4,000 kw containing a 100 percent ratchet for the six summer months, and that the foregoing premium apparently constituted a proper payment for its supplemental service until Southwestern's new filings in 1962. Lea County contends that it belongs in the same class as the other cooperatives. The evidence substantiates this. The cost to Southwestern of providing service to Lea County is that at the power pool level. The Staff's cost allocation to Lea County appears fair and reasonable. On the basis of the record we conclude that Lea County is entitled to the same rate as the other cooperatives with the addition, however, of a minimum charge reflecting the stand-by nature of Southwestern's capacity obligation.

It is clear that when Congress passed the REA Act there was no thought that the cooperatives would present any serious competition for investor-owned utility companies. It was intended that the cooperatives would supply energy in the rural areas where none had previously been available and where it was unprofitable for the private companies to provide the service. The record in this case discloses, however, that this situation no longer exists in respect to the parties here concerned. Several of the cooperatives now serve urban areas as well as rural areas and industrial as well as farm loads. The investor-owned utility companies, on the other hand, including Community are not confined to serving only urban areas. The investor-owned companies are by and large required to serve any customer applying for service within their service areas; the cooperatives serve only members. That there is direct competition between the investor-owned companies and the cooperatives is openly admitted. Southwestern says that Community's business is primarily urban and that it wants the same rate as the cooperatives—a favorable rate for Community's business. On the other hand, if the cooperatives are required to pay the same rate as the investor-owned companies some of the cooperatives (those not having industrial loads) would suffer a hardship.

The rates provided in the new filings, result in part at least, from economies and savings which Southwestern anticipates from new generating installations to be placed in operation in 1964 and 1965. The rates of Community and the other investor-owned companies remain unchanged. As noted, Community's rates prior to the new filings were some 37 percent higher than those of North Plains. Southwestern's return from the sales to the cooperatives is between 3 and 4 percent as compared to a return of about 9 percent on its sales to the private companies. We are of the opinion that on the whole record there is undue discrimination and that Southwestern should submit new filings which are just and reasonable and in accordance with the cost of service principles set forth herein and which are nondiscriminatory.

FINDINGS AND CONCLUSIONS

Upon consideration of the record, briefs and arguments of counsel, it is found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) The Southwestern Public Service Company (Southwestern) is a corporation organized and existing under the laws of the State of New Mexico. It owns and operates facilities for, among other things, the transmission and sale at wholesale of electric energy transmitted from points of generation in the States of Texas, New Mexico and Oklahoma, to points of consumption outside the state in which it is generated, which facilities are exclusive of those used for the generation of electric energy or used in local distribution or only for the transmission of electric energy in intrastate commerce or over facilities for the transmission of electric energy consumed wholly by the transmitter.

(2) Southwestern is a public utility within the meaning of Section 201 of the Federal Power Act and is subject to the jurisdiction of the Federal Power Commission.

(3) Southwestern sells electric energy at wholesale for resale to 3 investor-owned utility companies and to 17 rural electric cooperatives under rate schedules filed with the Federal Power Commission.

(4) In making each of the sales of electric energy at wholesale for resale under the rate schedules referred to in the Commission's suspension order of May 15, 1962, Southwestern transmits and sells electric energy at wholesale in interstate commerce for resale within the meaning of Sections 201, 205 and 206 of the Federal Power Act.

(5) Southwestern renders similar or comparable service to its investor-owned wholesale for resale customers, as rendered to its cooperatively owned wholesale for resale customers.

(6) All of Southwestern's firm wholesale for resale customers constitute a similar class of service.

(7) The Community Public Service Company (Community) and the North Plains Electric Cooperative (North Plains) are engaged in active competition for electric retail customers.

(8) The service rendered by Southwestern to Community is comparable to the service it renders to North Plains.

(9) Southwestern's unit cost of service in supplying energy to Community is no greater than its cost of service in supplying energy to North Plains.

(10) The wholesale rate for energy charged to North Plains by Southwestern is lower than that charged to Community.

(11) Community is injured and continues to be injured by reason of the higher rates charged to it by Southwestern as compared to those charged to North Plains for comparable service.

(12) By reason of the disparity in rates, Southwestern practices unlawful rate discrimination against Community in favor of North Plains.

(13) Southwestern charges its cooperatively owned wholesale for resale customers lower rates than it charges its investor-owned wholesale for resale customers.

(14) In respect to its wholesale electric rates, Southwestern accords preferential treatment to its cooperatively owned wholesale for resale customers.

(15) In its practice in according preferential rates to its cooperatively owned wholesale for resale customers, Southwestern thereby places a burden on its investor-owned wholesale for resale customers.

(16) Southwestern's practice of granting preferential rates to its cooperatively owned wholesale for resale customers is not justified by economic and social conditions as disclosed by the record.

(17) Southwestern's practice of granting preferential rates to its cooperatively owned wholesale for resale customers constitutes an undue and unlawful discrimination against its investor-owned wholesale for resale customers.

(18) Southwestern's total cost of wholesale service for its 19 wholesale customers determined on the basis of the cost of service, and net investment rate making principles, and on the basis of liberalized depreciation in accordance with the *Alabama-Tennessee Natural Gas Company* case (Opinion No. 417, February 3, 1964) and the Revenue Act of 1964, is $7,572,000. The cost allocable to Southwestern's wholesale customers and realized rate of return are as follows:

		Percentages
New Mexico	$1,242,680	11.00
Community	279,760	9.50
Cochran	105,640	6.04
Lea County	197,426	3.17
Other Cooperatives	5,746,494	4.16

(19) A fair and reasonable overall rate of return for Southwestern based on its wholesale for resale customers is 6 percent.

WHEREFORE, *it is ordered*, subject to review by the Commission on appeal, or review on its own motion, as provided in its Rules of Practice and Procedure, that Southwestern file with the Federal Power Commission within 60 days:

(A) Rate schedules superseding those referred to in Finding (4) above, embodying rates and charges designed to produce revenues from service to Community Public Service Company, New Mexico Electric Service Company, Cochran Power & Light Company, Lea County Electric Cooperative, Inc., Bailey County Electric Cooperative, Inc., Swisher County Electric Cooperative, Inc., Central Valley Electric Cooperative, Inc., Tri-County Electric Cooperative, Inc., South Plains Electric Cooperative, Inc., Roosevelt County Electric Cooperative, Rita Blanca Electric Cooperative, Inc., North Plains Electric Cooperative, Inc., North Fork Electric Cooperative, Inc., Lyntegar Electric Cooperative, Inc., Lighthouse Electric Cooperative, Inc., Lamb County Electric Cooperative, Inc., Greenbelt Electric Cooperative, Inc., Farmers Electric Cooperative, Inc., and Deaf Smith County Electric Cooperative, Inc., not in excess of that portion of Southwestern's overall cost of service reasonably and properly allocated to those nineteen customers referred to in Finding (18) above; with appropriate provisions governing maximum demands and quantities of electric power and energy available thereunder, minimum billing arrangements, reflecting Southwestern's capacity obligation to Lea County Electric Cooperative, Inc., high voltage discounts, together with the company's rules and regulations and other terms and conditions as may be reasonable and proper; *or*

(B) Rate schedules for Community Public Service Company, New Mexico Public Service Company, Cochran Power & Light Company, and Lea County Electric Cooperative, Inc., superseding Rate Schedules FPC Nos. 14, 15, 16 and 17, reflecting rates at the same level as those presently charged Southwestern's 15 other wholesale for resale customers, namely: Bailey County Electric Cooperative, Swisher County Electric Cooperative, Central Valley Electric Cooperative, Tri-County Electric Cooperative, South Plains Electric Cooperative, Roosevelt County Electric Cooperative, Rita Blanca Electric Cooperative, North Plains Electric Cooperative, North Fork Electric Cooperative, Lyntegar Electric Cooperative, Lighthouse Electric Cooperative, Lamb County Electric Cooperative, Greenbelt Electric Cooperative, Farmers Electric Cooperative, and Deaf Smith County Electric Cooperative, with appropriate provisions governing maximum demands and quantities of electric power and energy available thereunder, minimum billing arrangements, reflecting Southwestern's capacity obligation to Lea County Electric Cooperative, high voltage discounts, together with the Company's rules and regulations and other terms and conditions as may be reasonable and proper; and continue to bill the 15 cooperatives referred to above under Rate Schedules FPC Nos. 36, 47, Supplement No. 1, 37, 52,* 46, 45, 48, 49, 44, 43, 40, Supplement No. 1, 42, 41, 39, 38.

HARRY C. SHRIVER,
Presiding Examiner.

---

*Rate Schedule FPC No. 52 effective February 17, 1964, after the hearing record was closed in this proceeding, supersedes Rate Schedule FPC No. 21, which was included in the Commission's investigation order issued May 15, 1962.

APPENDIX A

Docket No. E-7038

Public utility and rural cooperative customers of the Southwestern Public Service Company with current and proposed changed rate schedules (adapted from Commission's order of May 15, 1962)

Customer	Designation of currently effective rate schedules	Designation of proposed changed rate schedules
New Mexico Electric Service Co., Hobbs, New Mexico.	FPC No. 14, Supplement No. 1.	
Cochran Power & Light Co., Morton, Texas	FPC No. 15, Supplement Nos. 1 and 2, FPC No. 34.	
Lea County Electric Cooperative, Inc., Lovington, New Mexico.	FPC No. 16, FPC No. 35, Supplement No. 1.	
Community Public Service Co., Fort Worth, Texas.	FPC No. 17, Supplement No. 1.	
Bailey County Electric Cooperative, Inc., Muleshoe, Texas.	FPC No. 18	FPC No. 36.
Swisher County Electric Cooperative, Inc., Tulia, Texas.	FPC No. 19, Supplement No. 1.	FPC No. 47,[1] Supplement No. 1.
Central Valley Electric Cooperative, Inc., Artesia, New Mexico.	FPC No. 20	FPC No. 37.
Tri-County Electric Cooperative, Inc., Hooker, Oklahoma.	FPC No. 21	FPC No. 52.
South Plains Electric Cooperative, Inc., Lubbock, Texas.	FPC No. 22, Supplement No. 1.	FPC No. 46.

Pioneer Cooperative Association, Inc., Ulysses, Kansas.[3]	FPC No. 33	

---

[1] Supplement No. 1 to FPC No. 47 is a redesignation of an existing rate schedule providing for facility construction and wheeling arrangements. (Supplement No. 1 to FPC No. 19.)

[2] Supplement No. 1 to FPC No. 40 embodies an agreement dated December 12, 1961 covering operational practices and facility payments by Southwestern to Lighthouse which Southwestern appears to regard as related to its power supply agreement with Lighthouse dated November 27, 1961, designated as Rate Schedule FPC No. 40. The two agreements were submitted for filing concurrently.

[3] With the exception of Rate Schedule FPC No. 33, all of Southwestern's effective and proposed rate schedules embody written contractual agreements between Company and the respective customers and provide for all requirements electric service or supplemental electric service. Rate Schedule FPC No. 33 provides for the rendition of emergency service only.

GLAMORGAN PIPE & FOUNDRY CO., PROJECT NO. 2358

ORDER ISSUING LICENSE (MINOR)

(Issued March 3, 1965)

Application was filed on April 10, 1963 by Glamorgan Pipe & Foundry Co. (Applicant) of Lynchburg, Virginia, for a license under Section 4(e) of the Federal Power Act (Act) for constructed minor Project No. 2358, located on the City of Lynchburg, Virginia, water works canal which takes water from the James River and discharges water back into the James River at a point downstream.

According to the application, the project was constructed prior to 1913 and has been in continuous operation since that date. There have been no major changes in the project works since its construction. No lands of the United States are affected by the project.

The Secretary of the Army and the Corps of Engineers, have advised that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, did not recommend any conditions for inclusion in any license for the project, in the interests of the Department.

The Department of Health, Education, and Welfare has advised that there is no indication that the project has any adverse effect on the water supply of the City of Lynchburg, and it is not anticipated that any adverse effects on water quality or vector control will arise.

While invited to do so, the Commission of Game and Inland Fisheries, Commonwealth of Virginia, has not reported on the application.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

In its order issued August 12, 1964, 32 FPC 591, for Project No. 2376, the Commission found that the James River from its mouth at Newport News, at least to its confluence with Jackson's River at mile 340 is a navigable waterway of the United States. Project No. 2358 is situated in the City of Lynchburg on the James River at approximately mile 252. For the reasons set forth in our Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962, and a termination date of December 31, 1993.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the Commonwealth of Virginia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 200 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(6) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved: 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Glamorgan Pipe & Foundry Co. (Licensee) of Lynchburg, Virginia, under Sections 4(e) and 10(i) of the Act, for a period effective as of April 1, 1962 and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2358, located on the City of Lynchburg water works canal, which takes water from the James River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed thereunder.

(B) Constructed Project No. 2358 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined;

(ii) project works consisting of: an 8-foot diameter metal flume, 70 feet long; a reinforced concrete flume intake structure in the City of Lynchburg water works canal; a power plant (24 feet x 40 feet-9 inches in plan and approximately 18 feet deep) composed of a reinforced concrete hydro intake pit which is open at the top and which contains one turbine (rated at 250 hp at a 13.5 feet head) connected to a generator (150 KW-DC) which is mounted in an adjacent reinforced concrete pit which contains all appurtenant facilities and over which a metal shed has been erected.

(iii) all other structures, fixtures, equipment, or facilities which are located in the project area and are used or useful in the maintenance and operation of the project; all rights and interests the possession of which are necessary or appropriate to the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof, and subject to the following special condition set forth herein as an additional article:

Article 12. The Licensee shall pay to the United States the following annual charge; effective April 1, 1962:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $10.00.

(D) The terms and conditions of the Act which it has been found above to be in the public interest to waive, are hereby eliminated from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

HAMMERMILL PAPER COMPANY, PROJECT NO. 2374

ORDER ISSUING LICENSE (MINOR)

(Issued March 3, 1965)

Application was filed on May 31, 1963 by Hammermill Paper Company (Applicant) of Erie, Pennsylvania, under section 4(e) of the Federal Power Act (Act) for a license for constructed Project No. 2374, located on the Paw Paw River in the City of Watervliet, in the County of Berrien, Michigan. No lands of the United States are affected by the project.

According to the application, the project is over 100 years old, with the dam being constructed in 1849 and the generating unit being installed and placed in operation in 1941.

St. Joseph Harbor, formed by the junction of the St. Joseph and Paw Paw Rivers, has been improved for navigation. The Villages of Lawrence and Paw Paw, upstream from Project No. 2374 on the Paw Paw River, were served by flatboats in 1840. "The Landing" near the Village of Lawrence came to be a place where considerable freight was received for shipment down the river.

The Secretary of the Army and the Chief of Engineers have advised that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain terms and conditions in the interests of fish and wildlife and free public access usually included in licenses for projects of the type herein under consideration.

The Department of Health, Education and Welfare has reported that the project does not significantly affect water supply or water control quality, nor is it expected that the granting of a license for the project will create or intensify vector problems.

The Michigan Department of Conservation offers no objection to the granting of a license for the project.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

For the reasons set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of January 1, 1941 and a termination date of December 31, 1990.

The Commission finds:

(1) The Paw Paw River is a navigable water of the United States from its mouth at least to the village of Paw Paw at mile 60.

(2) Applicant is a corporation organized under the laws of the State of Pennsylvania, and has submitted satisfactory evidence of compliance with the

requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 400 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Hammermill Paper Company (Licensee) of Erie, Pennsylvania, under sections 4(e) and 10(i) of the Federal Power Act (Act) for a period effective as of January 1, 1941 and terminating December 31, 1990, for the continued operation and maintenance of constructed minor Project No. 2374, located on the Paw Paw River, a navigable water of the United States, in Berrien County, Michigan, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2374 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined; and

(ii) a concrete dam about 8 feet high and 86 feet long surmounted with wooden flashboards two feet high on steel ways located about 2,000 feet upstream from the Licensee's mill; a head-race channel extending from the dam to the mill with a small forebay pond; a concrete spillway located on the head-race channel about 500 feet upstream from the mill; a rack house or intake; two steel flumes; a small powerhouse with one 446-horsepower turbine connected to a 375-kva generator; and all other structures, fixtures, equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed

Minor Project Affecting Navigable Waters of the United States (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 12. For the purpose of reimbursing the United States for the costs of administration of Part I of the Act the Licensee shall pay to the United States for the period January 1, 1941 through March 31, 1962 an annual charge of $5.00, and effective April 1, 1962 an annual charge of $20.00.

(D) The terms and conditions of the Act, which it has been found herein to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

JACK VANDELAAR AND DOROTHY A. VANDELAAR, DOING BUSINESS AS PANAMINT SPRINGS RESORT, PROJECT NO. 1764

ORDER ISSUING NEW LICENSE (MINOR)

(Issued March 3, 1965)

Application was filed on July 29, 1963, and supplemented on December 16, 1963 by Jack Vandelaar and Dorothy A. Vandelaar (Applicants) doing business as Panamint Springs Resort, of Lone Pine, California, for a new license under the Federal Power Act for constructed Project No. 1764, located on Darwin Wash, in Inyo County, California, and affecting lands of the United States.

The Department of the Interior, in reporting on the application, has advised that the effects of the project on wildlife resources are insignificant and no protective measures in the interest of fish and wildlife resources are considered necessary for inclusion in any new license for the project.

The Department of Health, Education, and Welfare has reported that the project does not cause any water supply, water pollution, or vector problems.

Although invited to do so, no report on the application has been received from the Department of Fish and Game of the State of California.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

Annual charges under the last license have been paid through March 25, 1963, the date upon which that license expired.

The Commission finds:

(1) Applicants are citizens of the United States and have submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a new license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) The issuance of a new license for the project will not interfere or be inconsistent with any reservation or withdrawal of public lands.

(5) The amount of annual charges to be paid under the new license for reimbursing the United States for the costs of administration of Part I of the Act, and for recompensing it for the use, occupancy and enjoyment of its lands by the project (10.9 acres) is reasonable as hereinafter fixed and specified.

(6) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f), 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

(7) The exhibits redesignated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the new license for the project.

The Commission orders:

(A) This new license is hereby issued under Sections 4(e) and 10(i) of the Federal Power Act (Act) to Jack Vandelaar and Dorothy A. Vandelaar (Licensees) doing business as Panamint Springs Resort, for a period of 10 years, effective as of March 26, 1963, for the continued operation and maintenance of minor Project No. 1764, located on Darwin Wash, Inyo County, California, and affecting lands of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 1764 consists of:

(i) all lands constituting the project area, the limits of which are 10 feet on each side of the points of diversion, pipe lines, powerhouse and 110-volt power line;

(ii) project structures, comprising a small collecting flume and box located at Lower Darwin Falls, a steel pipe line about 4.5 miles long, a powerhouse having installed capacity of 13 horsepower, and a short length of low-voltage electric power line; and

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights, and interests the possession of which is necessary or appropriate in the maintenance and operation of the project.

the said lands and project works being more specifically shown and described by Exhibits "F" and "G" filed with the application for new license, which exhibits are redesignated and described as follows:

Exhibit K: (FPC No. 1764–1) Map in one sheet entitled "Power Project of W. A. Reid and Franklin Booth, Panamint Springs, Inyo County, California", (Revised May 17, 1957) signed on August 8, 1940, by W. A. Reid and Franklin Booth;

Exhibit M: Specifications in one typewritten sheet entitled "General Description of Mechanical, Electrical and Transmission Equipment" signed on August 8, 1940 by Franklin Booth and William A. Reid.

(C) This license is also subject to the terms and conditions set forth in Form L–7, December 15, 1953, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States" (17 FPC 486), which terms and conditions, designated as Articles 1 through 14, are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 15. The Licensees shall pay to the United States the following annual charges, effective as of March 26, 1963.

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $5.00; and

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, $13.08.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this new license.

(E) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed by the Licensees and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ALPENA POWER COMPANY, PROJECT NO. 2419

ORDER ISSUING LICENSE (MINOR)

(Issued March 4, 1965)

Application was filed on October 11, 1963 by Alpena Power Company (Applicant) of Alpena, Michigan, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2419, known as Hillman Dam, located on Thunder Bay River, in the Village of Hillman, Montmorency County, Michigan. The project does not affect lands of the United States.

According to the application, the original project dam was built about 1895 creating a small pond to provide power for a grist mill. In 1907 a 50 kw hydroelectric generator was installed but was replaced in 1947 by the presently installed 250 kw unit. In December, 1956, Applicant purchased the project consisting of a dam, powerhouse and all franchises and permits from the Hillman Light and Power Company.

The Thunder Bay River with its tributaries, North Branch and Upper and Lower South Branches form one of the larger river systems in Michigan. It is located in the northerly portion of the South Peninsula and rises in Montmorency County whence it flows northerly and easterly to Thunder Bay, an arm of Lake Huron, entering at the City of Alpena. Alpena Harbor has been under improvement and maintenance as a continuing project by the Federal Government since 1876 and has a navigable depth of some 16 feet through a dredged channel varying from 100 to 200 feet wide for a distance of somewhat less than a mile up the Thunder Bay River. The drainage area herein involved was formerly heavily timbered with Michigan pine. There is ample historical evidence of logs having been floated down the tributaries of the Thunder Bay River and down the latter stream to the various mills in Alpena at its mouth. For example, in 1867, an estimated total of 51,579,175 feet of logs were floated down Thunder Bay River and its tributaries. The river was also used for the transporting of shingles, lath, telephone poles and railroad ties made from timber located on Thunder Bay River and its tributaries.

The Department of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project the terms and conditions in the interests of fish and wildlife resources and recreation usually included in licenses for projects of the type herein under consideration.

The Department of Health, Education, and Welfare has advised that there does not appear to be any serious pollution condition caused by the operation of the project dam.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

The Michigan Department of Conservation has advised that: there are no significant fish and wildlife problems involved in the operation of the project; the stream flow and water management have not impaired fishery values; and the public is permitted to use the waters of the 160 acre impoundment behind the project dam (located within the village limits of Hillman), and the village provides a park and public boat access site.

The Commission finds:

(1) Thunder Bay River and its tributaries, North Branch and Upper and Lower South Branches are navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Michigan, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 330 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Alpena Power Company (Licensee) of Alpena, Michigan, under Sections 4(e) and 10(i) of the Federal Power Act (Act) for a period effective as of January 1, 1947, and terminating December 31, 1993, for the continued operation and maintenance of the Hillman Dam Project No. 2419, located on the Thunder Bay River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2419 consists of:

(i) all lands constituting the project area and enclosed by the project boundaries or the limits of which are otherwise defined;

(ii) project works comprising: (1) a reinforced concrete and earth-fill dam with concrete wing walls extending upstream, the concrete portions of the dam, about 15 feet high and totalling about 127 feet in length, include (a) a spill gate section about 37 feet long (with 3 plank needle gates with total gate opening about 28 feet long); (b) a spill gate section with two openings totalling about 17 feet long; and (c) a gated powerhouse intake section having two steel gates, each about 8 feet 7 inches wide and 13 feet high; (2) a pond about 160 acres in area with maximum storage capacity of about 500 acre-feet; (3) a powerhouse containing 250 kw installed generating capacity; and (4) appurtenant facilities;

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act for the period January 1, 1947, through March 31, 1962, an annual charge of $5.00, and effective April 1, 1962, an annual charge of $16.50.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313 (a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

VANCEBURG ELECTRIC LIGHT, HEAT AND POWER SYSTEM v. KENTUCKY POWER COMPANY AND AMERICAN ELECTRIC POWER COMPANY, INC., DOCKET NO. E-7184

ORDER PROVIDING FOR HEARING AND DENYING MOTION TO DISMISS COMPLAINT

(Issued March 4, 1965)*

This order directs a hearing on issues raised in a complaint filed by the Vanceburg Electric Light, Heat and Power System (Vanceburg), Vanceburg, Kentucky, against the Kentucky Power Company, Ashland, Kentucky (Kentucky Power) and its parent corporation, American Electric Power Company, Inc., New York, New York (AEP). The complaint was filed on October 1, 1964. An answer to the complaint and motion to dismiss was filed by Kentucky Power and AEP on December 31, 1964. This order denies the motion to dismiss of Kentucky Power and AEP.

Vanceburg complains that Kentucky Power's existing rates to it for wholesale electric service are unjust, unreasonable, discriminatory and therefore unlawful within the meaning of Sections 205 and 206 of the Federal Power Act. It seeks reasonable rates and elimination of alleged discrimination or, in the alternative, an order making possible its substitution of service from the Fleming-Mason Rural Electric Cooperative, Flemingsburg, Kentucky (Fleming-Mason), in lieu of service from Kentucky Power. Vanceburg's complaint indicates that Fleming-Mason does not object to rendering, voluntarily, the requested service to the City. Accompanying the complaint is a written undertaking by Fleming-Mason dated August 16, 1963, expressing willingness to serve Vanceburg upon the receipt of appropriate authorization to do so (presumably from the Kentucky Commission

---

*See order re reconsideration issued March 29, 1965, *infra*, p. 654.

and/or the Rural Electrification Administration). Apparently, for that reason Vanceburg's complaint and Kentucky Power's and AEP's Answer and motion to dismiss the complaint were not served upon Fleming-Mason. As indicated hereafter, we are directing that this be done.

Vanceburg presently receives electric service from Kentucky Power under Kentucky Power's rate schedule MLP which was attached to the complaint. Kentucky Power also serves the City of Olive Hill, Kentucky, and the Big Sandy Rural Electric Cooperative. None of these rate schedules are presently on file with this Commission.[1]

Numerous underlying issues concerning the reasonableness of Kentucky Power's rates to its three wholesale customers, the allegation of discrimination among those customers, the alternative request for an order making possible service to Vanceburg from Fleming-Mason, the jurisdiction of this Commission over Kentucky Power's wholesale electric service, and the appropriate terms and conditions for service by Kentucky Power to Vanceburg make it necessary to direct a hearing on questions raised in the complaint and answer, and to deny the motion to dismiss, without prejudice to its being renewed at the conclusion of the hearing. We recognize that AEP is a holding company subject to regulation by the Securities and Exchange Commission and as such is not properly classifiable as a "public utility" within the meaning of the Federal Power Act. Retention of that Company as a nominal party to this proceeding will serve procedural purposes only. Section 301 of the Federal Power Act extends the investigatory and fact finding jurisdiction of the Commission to "the books, accounts, memoranda, and records of any person who controls, directly or indirectly, a licensee or public utility subject to the jurisdiction of the Commission, and of any other company controlled by such person, * * *".

The Commission further finds:

It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 201, 202, 205, 206, 301, 306, 307, 308 and 309 thereof, that (1) a public hearing be held on the issues raised in the complaint, that (2) Fleming-Mason be offered an opportunity to become a party thereto, and (3) that Kentucky Power's and AEP's motion to dismiss be denied.

The Commission orders:

(A) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Federal Power Act, and pursuant to the Commission's Rules of Practice and Procedure, a public hearing shall be held commencing at 10 a.m. (EDST) May 24, 1965, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., on the matters set forth in the finding above.

(B) A prehearing conference shall be held before the presiding examiner commencing at 10 a.m. (EST), April 1, 1965, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., for purposes as specified in the Commission's Rules of Practice and Procedure.

(C) Copies of the complaint of Vanceburg, and Answer and Motion to Dismiss by Kentucky Power and AEP shall be served by the Commission's Secretary on Fleming-Mason.

---

[1] Kentucky and West Virginia Power Co., Inc., a predecessor of Kentucky Power and a member of the AEP System, formerly supplied Vanceburg, Olive Hill and Big Sandy Cooperative with wholesale electric service. That company did file its rate schedules for service to those three customers with this Commission. Kentucky and West Virginia Power Co., Inc., Rate Schedule FPC Nos. 5, 4 and 6 respectively.

(D) Kentucky Power and AEP are hereby directed, pursuant to the provisions of the Federal Power Act, particularly Sections 301, 306, 307, 308 and 309 thereof, to grant to the members of the staff of the Federal Power Commission during regular business hours free access to and opportunity to inspect and examine all facilities, properties, accounts, memoranda and other records of those Companies when requested so to do for the purposes of the hearing ordered herein.

(E) Notices of intervention and petitions to intervene in this proceeding may be filed with the Federal Power Commission, Washington, D.C., 20426 on or before March 30, 1965, and in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

(F) The motion filed by Kentucky Power and AEP to dismiss the complaints filed by Vanceburg in the above-entitled proceeding is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WESTERN MASSACHUSETTS ELECTRIC COMPANY, PROJECT NO. 2485

ORDER ISSUING PRELIMINARY PERMIT

(Issued March 4, 1965)

Application was filed on September 8, 1964, by Western Massachusetts Electric Company (Applicant) of West Springfield, Massachusetts, for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2485, known as the Northfield Mountain Pumped Storage Project, which would utilize Applicant's existing Turners Falls reservoir of Project No. 1889 as the lower pool of the proposed pumped storage project on the Connecticut River, a navigable water of the United States, in Franklin County, Massachusetts, about one mile north of the Village of Millers Falls.

The Secretary of the Army and the Chief of Engineers have advised that a study of the Connecticut River basin has been authorized by the Committee on Public Works of the United States Senate in a resolution approved on May 11, 1962, which directed a study and report respecting development of a comprehensive basin plan in the interests of flood control, navigation, hydroelectric power, water supply and other purposes, coordinated with related land resources. The study is a cooperative effort being accomplished under the primary direction of the Division Engineer, U.S. Army Engineer Division, New England, Waltham, Massachusetts, utilizing the combined services of specialists of the Federal and State agencies concerned with water resources development. To date, no substantial part of this study has been made in the Turner Falls reach of the river. The Department of the Army stated that Applicant should evaluate the effect of the proposed project on the Connecticut River stages, discharges, and flow regimen, and should coordinate its studies with the Division Engineer, Waltham, Massachusetts.

The Department of the Interior, in commenting on the application, recommended for inclusion in any preliminary permit for the project a condition for the protection, conservation and enhancement of fish and wildlife resources, and to mitigate and compensate for the loss of or damage to such resources.

The Department of Health, Education, and Welfare, in commenting on the application, recommended that any preliminary permit for the project should indicate therein the probable adverse effects on water quality and the need for adequate consideration of this aspect of the project during the planning stages.

An informal protest has been received from Mr. and Mrs. Ansel W. Siteman, of Montague City, Massachusetts, against the proposed use of Erving State Forest for the location of the upper pool of the proposed project. This is a matter which pertains to an application for license when and if one is filed rather than an application for preliminary which is before us here.

Applicant requests a preliminary permit for a period of 36 months. It appears appropriate, however, that the initial period of the permit should be 24 months as hereinafter provided.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit. A license would authorize construction of a project.

The issuance of a preliminary permit for Project No. 2485 as hereinafter provided shall not in any way be construed as precluding the exercise of Commission action contemplated under the provisions of Section 7(b) of the Federal Power Act.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Massachusetts.

(2) Public notice of the filing of the application has been given as required by the Act. Except for the informal protest mentioned above, no protests or petitions to intervene have been received. No conflicting application is before the Commission.

The Commission orders:

(A) This preliminary permit is hereby issued to Western Massachusetts Electric Company (Permittee) of West Springfield, Massachusetts, for a period of 24 months, effective as of February 1, 1965, for the sole purpose of maintaining priority of application for license for Project No. 2485, to be located on the Connecticut River in Franklin County, Massachusetts, about one mile north of the Village of Millers Falls, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) The project, as tentatively proposed in the application, would consist of: (1) an artificial upper reservoir of about 14,000 acre-feet storage capacity, located on Northfield Mountain; (2) a penstock; (3) an underground powerhouse with a maximum capacity of 1,500,000 kilowatts in reversible pump-turbine generating units (minimum capacity presently under consideration is 450,000 kilowatts, using about 9,800 acre-feet of upper reservoir capacity); (4) a tailrace tunnel and canal; (5) an access tunnel; (6) Permittee's existing licensed Turners Falls (Project No. 1889) pond serving as the lower reservoir; and (7) appurtenant electrical and mechanical facilities.

(C) This permit is also subject to the terms and conditions set forth in Form P-1 entitled "Terms and Conditions of Preliminary Permit" (16 FPC 1303-1305) which terms and conditions, designated as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles;

Article 9. The Permittee shall submit at the close of each six-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, New York, New York, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning, coordinate its studies with the Division Engineer, Corps of Engineers, U.S. Army Engineer District, Waltham, Massachusetts, in order to permit evaluation of any effects on the Connecticut River stages, discharges and flow regime.

Article 11. The Permittee shall, during the period of project planning, cooperate with the United States Fish and Wildlife Service and the Massachusetts Division of Fisheries and Game for the purpose of planning and designing adequate conservation measures: (1) to prevent loss or damage to existing fish and wildlife resources, (2) to mitigate and compensate for the loss or damage to those resources, and (3) to develop and improve those resources where practicable.

Article 12. The Permittee shall, during the period of project planning, consult with the Department of Health, Education, and Welfare and the appropriate State and local agencies in order to permit evaluation of any adverse effects on water quality.

Article 13. The Permittee shall, during the period of project planning, consult with the appropriate State and local agencies to determine any necessary mosquito control measures.

Article 14. The Permittee shall, during the early period of project planning, consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41 of the Commission's regulations under the Federal Power Act.

Article 15. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgement of the acceptance of this preliminary permit, it shall be signed for the permittee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

GEORGIA POWER COMPANY, PROJECT NO. 2341

ORDER WAIVING PENALTY FOR DELINQUENCY IN PAYMENT OF ANNUAL CHARGES

(Issued March 5, 1965)

On December 1, 1964, a statement of annual charges for the period March 1, 1959 through December 31, 1963 under the license for Project No. 2341 was mailed to Georgia Power Company, licensee for the project. It was noted on the statement that the charges should be paid "within 45 days of rendition of a bill therefor" pursuant to Section 11.31 of the Commission's Regulations under the Federal Power Act.

The licensee's check for such charges, in the amount billed, was mailed on January 22, 1965. Thus, under the Commission's Regulations a penalty attached by virtue of the delay in payment.

By letter dated January 26, 1965, the licensee requested a waiver of the penalty, stating that there was "confusion as to the payment of annual charges on Project No. 2341, due to a letter requesting a statement on KWH Generation on this Company's Flint River Project No. 1218 being attached to the statement on Project No. 2341."

Our records show that the licensee has made timely payments of annual charges owing under licenses held by the licensee for various other projects.

The Commission finds:

In the circumstances, it will not be inconsistent with the public interest to waive the penalty which attached by reason of the licensee's delay in payment of the annual charges under the license for Project No. 2341.

The Commission orders:

The above-mentioned penalty by reason of the delay of the licensee in the payment of annual charges under the license for Project No. 2341 for the period billed is hereby waived.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MCNARY PROJECT, COLUMBIA RIVER, WASHINGTON-OREGON, DOCKET NO. E-6383

ALLOCATION OF COSTS

(Issued March 5, 1965)

The Congress, by the River and Harbor Act of March 2, 1945, Public Law No. 14, 79th Congress, 1st Session (59 Stat. 10), authorized the construction by the Corps of Engineers, Department of the Army, of the McNary dam project on the Columbia River "for purposes of navigation, power development, and irrigation * * *".

The enabling act cited above provides that surplus electric energy generated at the McNary dam shall be delivered to the Secretary of the Interior for disposition in accordance with existing laws relating to the disposition of power at the Bonneville dam. Section 6 of the Bonneville Act of August 20, 1937, Public Law 329, 75th Congress, 1st Session (50 Stat. 731), provides that rate schedules for the sale of Bonneville power shall be prepared by the Administrator and become effective upon confirmation and approval by the Federal Power Commission. Section 7 of the Bonneville Act states in part:

> * * * Rate schedules shall be based upon an allocation of costs made by the Federal Power Commission. In computing the cost of electric energy developed from water power created as an incident to and a by-product of the construction of the Bonneville project, the Federal Power Commission may allocate to the costs of electric facilities such a share of the cost of facilities having joint value for the production of electric energy and other purposes as the power development may fairly bear as compared with such other purposes.

The McNary project consists of a dam, navigation lock, hydroelectric power plant, and appurtenant structures, including facilities for passing anadromous fish and for project administration and housing of operating personnel. The power installation consists of 14 units rated at 70,000 kilowatts each, making a total rated capacity of 980,000 kilowatts.

By order issued December 4, 1953, the Commission made an interim allocation of costs pending the completion of the project in order that the results of such allocation would be available in determining the rates for the sale of power from the project. The project is now completed and the final cost and other applicable data have been supplied to the Commission.

The Commission's staff has analyzed all available data relating to the McNary project, has conferred with representatives of the Corps of Engineers and the Bonneville Power Administration, and has reviewed comments of the Secretary of the Interior and Acting Chief of Engineers with respect to the McNary allocation problem. On the basis of these studies the Commission's Bureau of Power has prepared and submitted a report, dated January 4, 1965 on "Allocation of Costs to Power Development, McNary Project, Columbia River, Washington-Oregon".*

The Commission having considered the matters hereinabove recited, the report of the Commission's Bureau of Power, the comments received from the Secretary of the Interior and the Acting Chief of Engineers, and other pertinent data relating to the McNary project together with the provisions of applicable statutes, *finds:*

(1) The federal interest rate of 2.5 percent, applicable during the period of construction of the McNary project, as determined under the provisions of paragraph 15 of the Bureau of the Budget's Circular No. A–47, dated December 31, 1952, is reasonable and appropriate for use in allocating the costs of the McNary project.

(2) The total investment cost of the McNary project, as of June 30, 1963, is $305,433,000 exclusive of specific recreation cost of $154,300.

(3) Inasmuch as irrigation development will not be benefited by the McNary project until some unknown future date, there should be no allocation of project costs to irrigation, at least for the present. Inasmuch as recreation is not an authorized project purpose, only the specific costs of recreation facilities should be allocated to recreation. Thus, the allocation of joint-use costs should be restricted to power and navigation.

(4) The use of the "Separable Costs-Remaining Benefits" method of cost allocation, as developed through federal inter-agency effort and set forth in the May 1958 report of the Inter-Agency Committee on Water Resources, entitled "Proposed Practices for Economic Analysis of River Basin Projects", is reasonable and appropriate in determining the allocation to power development of McNary project costs.

Upon consideration of the above findings and the report of the Bureau of Power, dated January 4, 1965, copy of which is attached hereto, and in the light of the provisions of the Bonneville Act and the River and Harbor Act of 1945, the Commission makes the following determination with respect to the allocation of McNary project costs to power development.

(A) The allocation of joint-use costs of the McNary project, including construction costs, interest during construction, and operation and maintenance expenses, is 18.7 percent to navigation and 81.3 percent to power.

(B) Applying the percentages set forth in paragraph (A) above to the joint-use investment cost as of June 30, 1963, results in allocating $47,730,600 of the total project investment cost to navigation, and $257,702,400 to power.

---

*Omitted in printing.

(C) The allocation made herein shall supersede the interim allocation made by the Commission set forth in its order of December 4, 1953.

Commissioner Ross *concurring*, joined by Commissioner Black.

Ross, *Commissioner, concurring:*

In view of the legislative history of the McNary project, I concur with the majority. However, in light of the increasingly heavy recreational use which exists at this project, I believe Congress should at this time amend the Act to allow an allocation for recreation for the remaining useful life of the project. Commissioner Black joins me in this concurring statement.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

NEW YORK STATE ELECTRIC & GAS CORPORATION, PROJECT NO. 2438

ORDER ISSUING LICENSE (MAJOR)

(Issued March 5, 1965)

Application was filed on January 2, 1964 by New York State Electric & Gas Corporation (Applicant) of Ithaca, New York, for a license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2438, known as the Waterloo and Seneca Falls Developments, located on the Seneca River (sometimes known as the Seneca Outlet) which is a part of the New York State Barge Canal System, in Seneca County, New York, in the Villages of Seneca Falls and Waterloo, New York.

According to the application, Project No. 2438 consists of: (1) the Waterloo Development, which was constructed and placed in operation in June, 1915, by a predecessor company of Applicant which acquired the plant in 1936; and (2) the Seneca Falls Development, which was constructed and placed in operation in July, 1917 by a predecesor company of Applicant which acquired the plant in 1936. The plant structures have remained substantially unchanged since original construction.

In our order issued December 9, 1964,[1] we stated that the Erie Canal, now called the New York Barge Canal, is one of the Nation's earliest and greatest improvements for internal navigation; that though developed by the State of New York and lying wholly within its borders, it has supported, from its inception, important traffic in interstate and foreign commerce through the port of New York; and that under well established principles of navigability, the Erie Canal, as long ago as 1903, was declared by the Supreme Court to be a navigable water of the United States.[2] We added, "When once found to be navigable, a waterway remains so."[3]

The Secretary of the Army and the Chief of Engineers have approved the plans of the project structures affecting navigation pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project, terms and conditions in the interests of fish and wildlife usually included in licenses for projects of the type herein under consideration.

---

[1] Niagara Mohawk Power Corporation, Project No. 2424, 32 FPC 1404.

[2] See, *The Robert W. Parsons*, 191 U.S. 17, 27 (1903).

[3] *United States* v. *Appalachian Electric Power Company*, 311 U.S. 377, 408 (1940).

The Department of Health, Education, and Welfare has advised that according to information from the New York State Department of Health, there is a need for a reassessment of the flow requirements in the river in the vicinity of the project. Results of any such reassessment and any resultant recommended change in flow requirements have not yet been submitted to the Commission. The subject project has no storage capacity and is operated as a run-of-river plant on releases by the State of New York. The provisions of Article 6 of Form L-3, herein made a part of the project license, reserve to the Commission the right to prescribe conditions for the protection of life, health and property upon the recommendation of the Department of Health, Education, and Welfare or the New York Department of Health.

While Applicant filed as part of its application an Exhibit R, it has not filed a recreational use plan appropriate for approval. By Article 31 herein we are requiring Applicant to cooperate with Federal, State and local agencies in the interest of recreation in connection with the use of project lands and waters by the public and to keep us advised at stated intervals with respect to the results.

In accordance with the criteria set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of New York, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 13,200 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(7) The project transmission and appurtenant facilities described in paragraph (B) below and which were included in the application for license are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(8) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to New York State Electric & Gas Corporation (Licensee) of Ithaca, New York, under Section 4(e) of the Federal Power Act (Act) for a period effective as of April 1, 1962 and terminating December 31, 1993, for the continued operation and maintenance of the Waterloo and Seneca Falls Developments, Project No. 2438, located on the Seneca River, a part of the New York State Barge Canal System, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2438 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2438-1) General Location Map;

Exhibit K: (FPC No. 2438-2) Waterloo Development; and (FPC No. 2438-3) Seneca Falls Development.

(ii) Project works comprised of:

Seneca Falls Development—A powerhouse, located on a concrete gravity-type dam owned by the State of New York, containing four 2,650 hp turbines each connected to a 2,000 kw generator; step-up transformers; a short 34.5 kv transmission line to Seneca Falls switchyard; and appurtenant electrical and mechanical facilities;

Waterloo Development—A concrete gravity-type dam; a canal; a powerhouse containing four 740 hp turbines each connected to a 480 kw generator; step-up transformers; a short 34.5 kv transmission line to Waterloo switchyard; and appurtenant electrical and mechanical facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application and which are designated and described as follows:

Exhibit L: (FPC No. 2438-4) Waterloo Development—Plan, Elevation & Sections of Powerhouse; (FPC No. 2438-5) Seneca Falls Development—Plan, Elevation & Sections of Powerhouse; and

Exhibit M: Three typewritten sheets and two diagrams entitled, "General Descriptions of Mechanical, Electrical and Transmission Equipment and their Appurtenances", filed in the Commission January 2, 1964.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States," (32 FPC 1114), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, except for Article 25 thereof; and subject to the following special conditions set forth as additional articles:

Article 30. The Licensee shall pay to the United States the following annual charge, effective as of April 1, 1962:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purpose is 13,200 horsepower.

Article 31. Licensee shall cooperate with Federal, State and local agencies in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project. At the end of six (6) years from the date of issuance of this license and every sixth year thereafter, Licensee shall advise the Commission by letter of the results of cooperation with such agencies and of further recreation development at the project.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC GAS & ELECTRIC COMPANY, OAKDALE IRRIGATION DISTRICT AND SOUTH SAN JOAQUIN IRRIGATION DISTRICT

ORDER APPROVING HEADWATER BENEFITS SETTLEMENT

(Issued March 5, 1965)

Pacific Gas & Electric Company (Pacific) on May 4, 1964, requested approval of agreements with the Oakdale Irrigation District and the South San Joaquin Irrigation District (Districts) concerning compensation for headwater benefits in the Stanislaus River basin in California. The Commission, as provided in section 13.1 of the Regulations under the Federal Power Act, may approve such settlements in lieu of a headwater benefits determination under section 10(f) of the Federal Power Act (16 U.S.C. 803(f)).

Pacific owns and operates in the basin Project No. 2019, called the Spicer reservoir, and Project No. 2130, consisting of the Relief and Strawberry reservoirs, the Spring Gap and Stanislaus developments, and the Melones powerplant. The Districts jointly own and operate Project No. 2005, consisting of the Donnells and Beardsley developments; Project No. 2067, consisting of the Tulloch development; and the unlicensed Melones dam and reservoir. Pacific's and Districts' project works are interspersed so that there is an exchange of headwater benefits.

Pacific and the Districts entered two contracts concerning their developments in the Stanislaus River basin. The so-called Melones contract, executed on January 2, 1925, settled claims between the parties as to their respective rights in and to the waters of the Stanislaus River and the waters impounded or to be impounded in any reservoirs constructed or to be constructed within the Stanislaus River basin by the parties, including claims associated with the construction, operation, and maintenance of the Melones powerplant by Pacific and the Melones dam and reservoir by the Districts. Except to the extent that it is inconsistent with the so-called Tri-Dam Project Contract, the Melones Contract still remains in full force and effect.

The Tri-Dam Project Contract, executed on July 9, 1952, and later amended, established terms and conditions for the Districts' construction of the Donnells, Beardsley, and Tulloch developments. Briefly, the arrangement was that the District would sell the power from these developments to Pacific in return for specified payments during the construction and operation of the project. The contract states:

> The obligations of Pacific and Districts to each other hereunder shall constitute full consideration for all benefits to be received hereunder including all headwater benefits by reason of any facilities of the parties now existing or to be constructed hereunder. In the event that, by reason of any requirement of the Federal Power Commission or other governmental authority having jurisdiction so to do, either party hereto is required to pay headwater benefits to the other by reason of such facilities, the amounts to be paid by Pacific to Districts hereunder shall be reduced by the amount of any such headwater benefit payment made to Districts or increased by the amount of any such headwater benefit payment received from Districts.
>
> No replacement, improvement or enlargement of Pacific's Stanislaus or Melones Plant shall result in any increase in Pacific's payments hereunder, even though additional forebay storage and head may be developed below Pacific's existing diversion to its Stanislaus Tunnel.
>
> The payments to be made hereunder do not cover or take into account benefits that may be received by either party hereto as a result of the development of an undeveloped head, or the development of additional storage or water supply, and compensation for any such benefits shall be the subject of a new or supplemental contract.

Since Pacific and the Districts relinquished rights to payments for headwater benefits to obtain other valuable rights, the agreements are contracts concerning headwater benefits compensation which may be filed by the parties under Section 13.1 of the Regulations under the Federal Power Act.

The Commission finds:

The agreements dated January 2, 1925, and July 9, 1952, as amended, between the Pacific Gas & Electric Company on the one hand and the Oakdale Irrigation District and the South San Joaquin Irrigation District on the other constitute an effective and reasonable method for compensating each party for headwater benefits received from the other party's projects in the Stanislaus River basin in California.

The Commission orders:

The aforesaid agreements are approved with respect to settlement of headwater benefits under section 13.1 of the Regulations under the Federal Power Act in lieu of headwater benefits determinations under Section 10(f) of the Federal Power Act until a further order of the Commission is required due to changes in conditions.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC SERVICE COMPANY OF COLORADO, PROJECT NO. 2275

ORDER ISSUING LICENSE (MINOR)

(Issued March 5, 1965)

Application was filed on March 22, 1960, by Public Service Company of Colorado (Applicant) of Denver, Colorado, for a license for a minor-part license under Section 4(e) of the Federal Power Act for a constructed project, known as Salida Hydro Plant No. 1 and Salida Hydro Plant No. 2, designated as Project No. 2275, located on South Arkansas River and Fooses Creek, in Chaffee County, Colorado, and affecting lands of the United States within the San Isabel National Forest. Applicant, on December 11, 1963, filed application to amend its March 22, 1960 application to have it considered as an application for a minor license for the project.

The project was constructed in 1905 by a predecessor of Applicant. Additions and replacements were made between 1908 and 1957. Applicant acquired the project works on September 3, 1924. A special use permit for the project was issued by the Forest Service for a 50-year period ending March 21, 1960. Annual charges for the occupancy of forest lands by the project have been paid to the Forest Service through December 31, 1963.

The Department of the Interior, in reporting on the application, stated that the U.S. Fish and Wildlife Service finds that continued operation of the project will not significantly affect fish and wildlife resources and no special provisions will be required in the license, and that other interests of the Department would not be adversely affected by the issuance of a license.

The Forest Service, Department of Agriculture, in reporting on the application, stated that the terms and conditions for the protection and utilization of National Forest lands usually included in licenses for such projects would be sufficient to protect the interests of the Forest Service.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

Exhibit K (FPC No. 2275–3), filed as part of the application, is not sufficiently detailed to describe the lands of the United States which were withdrawn pursuant to the filing of the application for license or to determine the amount of annual charges to be paid under any license for the occupancy by the project of lands of the United States. Consequently, we are herein requiring the filing of a revised Exhibit K and deferring, until some future date, a determination of the annual land charges.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Colorado, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) The issuance of a license for the project will not interfere or be inconsistent with the purposes for which the San Isabel National Forest was created or acquired.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1747 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

(8) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Public Service Company of Colorado (Licensee) of Denver, Colorado, under Sections 4(e) and 10(i) of the Act for a period effective as of March 22, 1960, and terminating December 31, 1993, for the continued operation and maintenance of minor Project No. 2275, located on lands of the United States within the San Isabel National Forest, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2275 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined;

(ii) Project works comprised of:

(a) Salida Hydro No. 1 consisting of a concrete gravity dam, 10 feet high with a 50-foot crest length across South Arkansas River, creating a forebay with an area of 0.32 acres and 3 acre-feet capacity known as the Garfield Diversion Reservoir; a riveted steel pipeline varying from 24 to 16 inches in diameter and 4806 feet long (2553 feet of which is on lands of the United States), extending to Fooses Creek Reservoir (3.675 acres) from which extends Pressure Pipe Line No. 1, which is a welded steel pipe varying from 30 to 24 inches in diameter and 8080 feet long (4498 feet on United States lands), to Salida Powerhouse No. 1, which contains a 750 KW generator connected to a 2300/17,000 volt substation;

(b) Salida Hydro No. 2, consisting of a forebay which is the afterbay for the Salida No. 1 plant; Pressure Pipe Line No. 2, a welded steel pipeline varying from 34 to 28 inches in diameter and 11,668 feet long (2486 feet on United States lands), extending to Salida Powerhouse No. 2 which contains a 560 KW generator connected to a 2300/17,000 volt substation, and

(c) A 17,000-volt transmission line between Salida Hydros Nos. 1 and 2; together with all other structures, equipment, or facilities used or useful in the maintenance and operation of the project and located on the project area; which lands and project works are more specifically shown by certain exhibits which formed part of the application and which are designated and described as follows:

Exhibit J: Sheet 1 of 2 (FPC No. 2275–1) entitled "Salida Hydro Reservoirs & Water Conduits;"

Exhibit K: Sheet 2 of 2 (FPC No. 2275–4) entitled "Salida Hydro Reservoirs & Water Conduits."

(C) This license is also subject to the terms and conditions set forth in Form L–7, December 15, 1953, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States" (17 FPC 486), which terms and conditions, designated as Articles 1 through 14, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 15. The Licensee shall, within one year from the date of issuance of this license, file with the Commission revised Exhibits J and K showing the final project boundary, including the transmission line right-of-way, in accordance with the rules and regulations of the Commission.

Article 16. The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $90 per annum, effective January 1, 1965.

(ii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its land for project purposes, effective January 1, 1965, an amount to be determined hereafter by the Commission.

(iii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its land for transmission line purposes, effective January 1, 1965, an amount to be determined hereafter by the Commission.

Article 17. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: *Provided*, That the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and *Provided further*, That the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SUN OIL COMPANY

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 5, 1965)

On February 5, 1965, Sun Oil Company (Sun) filed an application for rehearing of the Commission's letter order issued January 6, 1965, 33 FPC 26, rejecting notices of change in rate tendered by Sun which were designated by Sun as Supplement Nos. 3, 1 and 5 to Sun's FPC Gas Rate Schedule Nos. 125, 131 and 133, respectively. The proposed increased rates of 18.24347¢ per Mcf (Rate Schedule Nos. 125 and 131) and 18.74¢ per Mcf (Rate Schedule No. 133) were rejected because they exceeded the 18¢ moratorium level imposed in Opinion No. 422 issued March 23, 1964, where permanent certificate authorization was granted for the sales involved here.

Sun in its application for rehearing claims that the Commission had no authority to impose the moratorium condition in the above certificate case. Sun's contentions as to the validity of the moratorium provision have been rejected previously in Opinion Nos. 422 and 422–A, 31 FPC 623, 1315, and, as Sun points out, it has petitioned for review of those opinions. Sun's attempt to raise again these issues here represents an unwarranted collateral attack on our decision in Opinion Nos. 422 and 422–A. These issues have been decided by us and any further action with respect to these issues must await disposition by the court of Sun's petition for review. We therefore see no need to discuss these matters further.

Sun also argues that even if the moratorium condition was properly imposed, the Commission should have treated the notices of change as proper up to 18¢ per Mcf, the moratorium level. Even assuming *arguendo* we have authority to construe the tenders in the manner asserted by Sun, a proposition with which we disagree, we are under no obligation to exercise such authority in a situation such as here where the company is fully aware that its filings are in conflict with a final order of this Commission. Under the circumstances presented here, we think it incumbent upon Sun, if it so desires, to make the 18¢ filings which would be consistent with the applicable moratorium provision.

The Commission orders:

For the reasons set forth above, Sun's application for rehearing filed on February 5, 1965, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65–267

ORDER INSTITUTING INVESTIGATION

(Issued March 5, 1965)

A large diameter pipeline of Tennessee Gas Transmission Company (Tennessee) on March 4, 1965, exploded at a point near Natchitoches, Louisiana. The explosion resulted in extensive loss of life and property damage.

Tennessee is a "natural-gas company" within the meaning of the Natural Gas Act and is, therefore, subject to the jurisdiction of the Commission.

The Commission finds:

It is necessary and proper in the public interest that an investigation of the explosion hereinbefore described be instituted by the Commission.

The Commission orders:

Pursuant to the provisions of the Natural Gas Act, particularly Section 14 thereof, an investigation of Tennessee Gas Transmission Company is hereby instituted for the purpose of investigating the facts, conditions, practices or operations relating to the explosion near Natchitoches, Louisiana.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PACIFIC GAS & ELECTRIC COMPANY, DOCKET NO. E-7190

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued March 8, 1965)

Pacific Gas & Electric Company (Applicant), filed an application on December 29, 1964, seeking an order authorizing it to acquire certain electric distribution facilities of the Pacific Power & Light Company (PP&L) and to consolidate and merge such distribution facilities with those of the Applicant.

Applicant is incorporated under the laws of the State of California and is authorized to do business in the State of California with its principal business office in San Francisco, California. Applicant is an operating public utility engaged principally in the business of furnishing electric and gas service throughout most of northern and central California with properties located and operations carried on entirely in California. It distributes electric energy in 202 incorporated cities, about 300 unincorporated communities, and an extensive rural area in 46 counties.

PP&L is a corporation organized under the laws of the State of Maine and qualified to do business in the States of Oregon, Wyoming, Washington, California, Montana and Idaho with its principal business office in Portland, Oregon. PP&L is an operating public utility principally engaged in the production, transmission, distribution, and sale of electricity in northern California, Oregon, Washington, Montana, Wyoming and Idaho. It obtains approximately 6% of its annual revenues from service in California.

The proposed transaction results from an agreement dated October 30, 1964 whereby PP&L has agreed to sell to Applicant and Applicant has agreed to purchase PP&L's electric distribution facilities including additions and betterments, as therein designated. The facilities consist of 12 kv distribution lines and taps which serve about 156 consumers located in the small communities of Trinity Center and Carrville, California, and near the county road extending northward from Trinity Center to Eagle Creek. Facilities are now supplied over a 20-mile 12 kv line from Castella, California, and in times of emergency by a 250 kw diesel generating plant located at Trinity Center.

Applicant represents that this power line is costly and difficult to maintain, and in the severe winter weather, is subject to interruption, and that PP&L believes that Applicant is in a better position to furnish dependable electric service to present and prospective customers in territories now served by PP&L. Applicant is presently constructing a five mile extension of its 12 kv distribution system northward along the west side of the Trinity Lake reservoir of the

USBR Ceneral Valley Project. A relatively short continuation of this extension will permit Applicant to connect to the facilities it proposes to acquire. Applicant states that it would then be in a position to economically furnish a dependable and adequate supply of power to the area.

Applicant proposes to adopt, for the customers it will acquire, rates and charges for electric service equivalent to those of PP&L now in effect in the area.

According to the application, the Applicant has agreed to pay PP&L the sum of $144,921 as a cash consideration for these electric distribution facilities subject to adjustments or net additions and depreciation accrued from September 30, 1964 to date of conveyance. The base price of $144,921 as of September 30, 1964, was the same as original cost depreciated as of the same date. Therefore, on the books of the Applicant, the acquisition of the facilities will not result in the creation of an acquisition adjustment; and on the books of PP&L, the sale of the facilities will not result in a gain or loss.

Applicant alleges that the agreement dated October 30, 1964, is the result of arm's-length bargaining and that its terms and provisions are fair, just and reasonable.

Written notice of the application has been given to the California Public Utilities Commission and to the Governor of that State. Notice was also published in the Federal Register on January 13, 1965 (30 F.R. 456), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before January 25, 1965, file petitions or protests with the Federal Power Commission, Washington, D.C. 20426. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act subject to the jurisdiction of the Commission, as heretofore described in the Commission's order issued March 13, 1958, *In the Matter of Pacific Gas & Electric Company*, Docket No. E-6800 (19 FPC 326).

(2) By the proposed transaction, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of PP&L, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Applicant, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

(4) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed acquisition by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation or property claimed or asserted by this Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED FUEL GAS COMPANY, DOCKET NO. CP65-207

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 8, 1965)

On January 8, 1965, United Fuel Gas Company (Applicant), Charleston, West Virginia, filed in Docket No. CP65-207 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas facilities and the sale of natural gas, all as more fully set forth in the application on file with the Commission.

Applicant seeks authorization for the sale of natural gas to Columbia Gas of Kentucky, Inc., (Columbia) an affiliated wholesale customer of Applicant, for resale to The International Nickel Company, Inc. for use in a new plant being constructed at Burnaugh, Boyd County, Kentucky.

Total estimated volumes of natural gas involved to meet annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	25,000	70,000	120,000
Peak day (Mcf)	600	1,200	2,000

Applicant proposes to construct and operate a measuring and regulating facility on its 10-inch line in Boyd County, Kentucky. The estimated cost is $7,900, and will be financed with internal generated funds.

A temporary certificate was issued to Applicant by Commission letter dated February 12, 1965, granting the authorization requested herein.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "Natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 1, 1944, in Docket No. G-341 (4 FPC 534).

(2) The proposed construction and operation of facilities and sale and delivery of natural gas by Applicant to Columbia as hereinbefore described, and as more fully set forth in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the sale, transportation and delivery of natural gas to Columbia as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within 90 days of the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-90

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 8, 1965)

On October 2, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP65-90 an application as supplemented on December 14, 1964, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas in interstate commerce for Spencer Chemical Division of Gulf Oil Corporation (Spencer), all as more fully set forth in the application as supplemented.

Applicant will transport natural gas for Spencer at a rate of seven cents per Mcf pursuant to an agreement between the parties dated August 31, 1964, from Spencer's Claiborne Gasoline Plant located in the Lisbon Field, Claiborne Parish, Louisiana, to Spencer's Vicksburg Chemical Plant located in Warren County, Mississippi. Applicant estimates that annual and peak day quantities of gas to be transported during each of the first three years of service are 3,650,000 Mcf and 15,000 Mcf, respectively. Transportation will be by means of existing facilities.

Applicant is presently meeting the requirements of the chemical plant by delivering on a firm basis a maximum daily quantity of 20,000 Mcf of gas. After the commencement of the transportation service, Applicant will supply Spencer's plant requirements in excess of those satisfied by the transportation service. Although not requested in the subject application, it appears appropriate to include in the certificate hereinafter issued authorization to operate facilities for the transportation and delivery of the volumes of gas sold by Applicant to Spencer on a firm basis.

After due notice no petition to intervene, notice of intervention, or protest to the granting of the application has been received.

At a hearing held on March 4, 1965, the Commission on its own motion received and made part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The operation of facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, will be for the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the operation thereof and transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The operation of facilities and transportation of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), and (e) of Section 157.20 of said Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the quantity of natural gas transported and delivered to Spencer on a firm basis should be limited to a maximum of 20,000 Mcf per day.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate issued hereinafter shall not entitle Spencer, to whom firm deliveries are authorized herein, to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, United Gas Pipe Line Company, authorizing the operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, as supplemented, in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder is conditioned upon Applicant's compliance with all Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of said Regulations.

(C) The service authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within 60 days from the date on which this order issues.

(D) The total quantity of natural gas delivered by Applicant on a firm basis to Spencer be and the same is hereby limited to a maximum of 20,000 Mcf per day.

(E) The certificate issued by paragraph (A) above shall not entitle Spencer, to whom firm deliveries are authorized therein, to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED STATES DEPARTMENT OF THE INTERIOR, BONNEVILLE POWER ADMINISTRATION, DOCKET NO. E-7208

ORDER CONFIRMING AND APPROVING RATE SCHEDULE

(Issued March 8, 1965)

On February 2, 1965, the Assistant Secretary of the Interior, acting on behalf of the Bonneville Power Administration (Bonneville), pursuant to the provisions of the Bonneville Act (50 Stat. 731), as amended, filed a request that the Commission approve the application of the special rate included in a power sales contract (Contract No. 14-03-48585) with the Bureau of Mines for a period beginning August 12, 1964, and ending December 19, 1965.

The power sales agreement between Bonneville Power Administrator and the Director, Bureau of Mines, provided for electric service to the Bureau of Mines Albany Metallurgy Research Center in Albany, Oregon. The contract was executed January 13, 1965, with an effective date commencing August 12, 1964, and terminating December 19, 1965. It takes the place of, and extends the conditions provided in, the former contract between the same parties which expired August 12, 1964. The purpose of the contract is to supply electric energy to the Albany Metallurgy Research Center for experiments with the development of new and improved metal processing methods employing electric energy. The rate proposed in the new contract is the same as that in the expired contract, namely, 2.5 mills per kilowatt-hour.

The Commission, by orders issued March 23, 1945, 4 FPC 885, and August 6, 1952, 11 FPC 1174, in Docket No. IT-5519, heretofore approved the special rate which was set forth in similar contracts with the Bureau of Mines.

The Commission finds:

It is appropriate for the purposes of the Bonneville Act that the rates and charges contained in the Contract No. 14-03-48585, executed January 13, 1965, between Bonneville and the Bureau of Mines be confirmed and approved.

The Commission orders:

The rates and charges, contained in the Contract No. 14-03-48585 between Bonneville and the Bureau of Mines referred to hereinbefore are confirmed and approved for a period expiring December 19, 1965.

OPINION NO. 452

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC., PROJECT NO. 2338

OPINION AND ORDER ISSUING LICENSE AND REOPENING AND REMAINING PROCEEDING FOR ADDITIONAL EVIDENCE ON THE LOCATION OF THE PRIMARY LINES AND DESIGN OF FISH PROTECTIVE FACILITIES

(Issued March 9, 1965)*

Syllabus

1. Commission approval is not required for construction of interstate transmission lines by public utilities except [as here] where lines are primary lines from hydroelectric plant transmitting power from project into utility's interconnected transmission grid. P. 433.
2. Record supports findings as to engineering and economic feasibility, applican't ability to finance, adequacy of project to perform intended function and public utility's need for ever expanding sources of energy supply. P. 434.
3. Authority granted Commission under Federal Power Act is as broad as the public interest. P. 435.
4. Primary benefit from proposed project would be its economy and reliability as source of power to meet utility's peaking and emergency requirements. P. 436.
5. Project would contribute to abatement of air pollution problem in the City of New York. P. 436.
6. Commission can and will deny license in order to preserve natural beauty of an area when facts support such conclusion. P. 439.
7. In instant circumstances Commission cannot conclude that proposed Cornwall powerhouse substantially impairs scenic, historic or recreation values in area. P. 439.
8. To be licensed project must meet statutory test of "being best adapted to comprehensive plan for improving or developing a waterway". P. 440.
9. Reviewing all alternative suggestions and evidence of record, Commission *concludes* proposed project fully meets applicant's needs for additional capacity for peaking and emergency purposes in manner far superior to possible alternatives. P. 443.
10. No sufficient reason has been shown why public utility, and its consumers should be required to absorb additional costs for more underground cable installation in view of limited impact lines will have on area involved. P. 446.
11. Record does not permit informed determination called for under Section 10(a) regarding specification of route and amount of required right-of-way for primary transmission lines; public interest requires this phase be remanded to Examiner for additional evidence. P. 447.

---

*Initial decision appears on p. 465. Opinion No. 452-A issued May 6, 1965, denies rehearing and stay, etc., 33 FPC 965. Set aside, 354 F. 2d 608 (CA2-1965), cert. den. 384 U.S. 941.

12. In view of comments, Commission imposes special conditions in license to require company to consult with public agencies in design, construction and operation of fish screening facilities. P. 449.
13. Applicant required to file its proposed recreational use plan for Commission approval. P. 451.
14. Commission *issues* major license, under Section 4(e) of the Federal Power Act, for Cornwall Pumped Storage Project.

Commissioner Ross *concurring in part* and *dissenting in part.*

Randall J. LeBoeuf Jr., Craigh Leonard and *Carl B. Hobelman* for Consolidated Edison Company of New York, Inc.

Raymond H. Bradford for the Village of Cornwall, New York.

Dale E. Doty for Scenic Hudson Preservation Conference.

C. Edward Doyle for Philipstown Citizens Association.

John C. Tuttle for the Town of Cortlandt, New York.

Samuel L. Slutzky for the Town of Putnam Valley, New York.

Robert A. Cook for the New York State Water Resources Commission.

John Kibbe and *Raymond Margles* for the Town of Yorktown, New York.

John D. Lane, George Bruder and *Michel Levant* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and David S. Black.

SWIDLER, *Chairman:*

I

BACKGROUND AND ISSUES

This is a proceeding under Part I of the Federal Power Act[1] involving an application by Consolidated Edison Company of New York, Inc. (Con Edison or applicant) for a section 4(e) license to build a hydroelectrical project on the Hudson River in New York State to be known as the Cornwall Pumped Storage Project (the project). Since the Hudson River is a navigable water of the United States,[2] the project is subject to the jurisdiction of this Commission. The matter is now before us for determination upon exceptions[3] to the decision of the Presiding Examiner issued July 31, 1964, recommending that a license be granted.

The project is to be physically located in a general area of our nation steeped in the history of the American Revolution and of the colonial period. It is also a general area of great scenic beauty. The principal issue which must be decided is whether the project's effect on the scenic, historical and recreational values of the area are such that we should deny the application.

The project has now been under study by the Commission for more than two years. Extensive public hearings have been held before an Examiner of the Commission in order to give all interested parties an opportunity to present their views. All parties were also permitted to argue their position orally before the full Commission. Plans for the proposed project were submitted to the interested State and Federal agencies for their consideration and comment. The Department of the Interior made a number of suggestions for license articles, all of which have been carefully considered.

[2] *Gibbons v. Ogden,* 22 U.S. 1; *U.S. v. Rio Grande Irrigation Co.,* 174 U.S. 690, 709.

[3] Filed by Philipstown Citizens Association, Town of Putnam Valley, Town of Yorktown, Village of Cornwall, Scenic Hudson Preservation Conference, Con Edison, and the staff of this Commission. Briefs opposing the exceptions have been filed by Scenic Hudson, Con Edison, and the staff.

Because of the great importance of this proposed project and the Commission's concern with the scenic and historical values of this area to all the citizens of this country, the members of the Commission visited the area during the month of May 1964. While our decision is and must be based upon the record compiled in this proceeding, the evidence has been evaluated against the background of the personal knowledge so obtained.

Description of Project

This proceeding involves a relatively new type of hydroelectric works, a pumped storage plant. It may be helpful at the outset to refer to the unique features of such a plant which are explained in the Commission's National Power Survey Report as follows (pp. 69–70):

> A pumped storage plant generates electric energy during system peak load periods, using hydroelectric units driven by water from a headwater pool. During off-peak periods energy from other sources, usually from steam-electric plants, is used to pump water from a lower pool back to the headwater pool. The water in the upper pool may thus be regarded as the equivalent of stored steam-generated energy. The pumped storage generating plants have many of the favorable characteristics of conventional hydroelectric plants for peaking and reserve use * * *.
>
> A prerequisite for a pumped storage development is the availability of energy at low incremental cost for the pumping cycle. For every 2 kilowatt-hours of energy generated, approximately 3 kilowatt-hours of energy are required for pumping. Reduced equipment cost brought about by the development in recent years of the reversible pump-turbine unit, permitting pumping and generating operations to be combined in a single machine, has contributed importantly to the economics of pumped storage installations.
>
> Pumped storage projects are usually more economically developed at sites having high heads. The heads of existing projects range up to 820 feet, but additional projects are being planned with heads in excess of 1,000 feet. Costs of development depend upon individual site conditions. Economically attractive projects generally cost $100 to $120 per kilowatt or less.

The illustration explains the mode of operation of a pumped storage project such as that proposed by the applicant.

The examiner has provided a detailed description of the Cornwall pumped storage project in his initial decision and it need not be repeated here but it will be helpful to summarize the major features of the project, especially as they relate to the issues before us.

The evidence shows that the project would be the world's largest high-head pumped storage development with a maximum peaking capacity of 2,000,000 kw. It is to be situated mainly on the west side of the Hudson River, approximately 40 miles north of New York City, in the Village of Cornwall and Towns of Cornwall and Highlands, Orange County, New York. Its estimated cost, including the project transmission facilities, is approximately $162,000,000. The project will thus provide capacity for about $81 per kilowatt at the 2,000,000 kilowatt rating or approximately $90 per kilowatt at the 1,800,000 kilowatt name plane capacity. As with all pumped storage projects it is intended for meeting peak loads rather than to supply around-the-clock generation.

As detailed in the examiner's decision, the total monetary advantage of the Cornwall project over the costs of a conventional single-reheat thermal plant of the same capacity installed in N.Y.C. would be about $12,000,000 at 1,800,000 kilowatts and $15,663,000 at the 2,000,000 kilowatt level planned for construction. In view of the favorable economics of future units, some minimal provisions[4] as suggested by the Commission's staff have been included at the present time for possible future expansion of the plant to 3,000,000 kilowatts. The net annual savings from the additional 1,000,000 kilowatt of capacity would amount to approximately $4,270,000 assuming the same $125 per kilowatt cost of thermal generation utilized in the previous computations. Thus the net annual benefits from the project, if it is increased to 3,000,000 kilowatts, will amount to about $19,933,000.

The project consists of three major elements, the reservoir, the power plant and the transmission lines.

Reservoir

The upper storage reservoir of the project will contain a surface area of 240 acres and a usable capacity of 25,000 acre-feet. It would be located in the highlands south of the Village of Cornwall and connected to the powerhouse located on the river front over a thousand feet below by a tunnel 40 feet in diameter. The tunnel will be bored into the north shoulder of Storm King Mountain and will therefore not be visible when completed.

The upper reservoir of the project will occupy and replace a small reservoir now providing part of the water supply of the Village of Cornwall. In addition, approximately 70 acres of property now within the Black Rock Forest, a private forest reserve of Harvard University, will be inundated by the proposed project reservoir.

Con Edison has offered appropriate compensation, either in land or money, for the acreage taken from the Black Rock Forest. Applicant also has offered to purchase approximately 150 acres of property adjacent to the storage reservoir area and donate this land to the Palisades Interstate Park Commission in exchange for an easement for the construction of the pressure tunnel underneath the park's lands. Thus, even considering the additional area that will be inundated, the reservoir area will provide a minimum gain of 80 acres of park land open to the public for recreational purposes.

Because of the lack of filtration facilities the Village does not permit the reservoir area to be used for general recreational purposes at present. The level of water in the reservoir will fluctuate widely over the course of daily operation of the power plant. In the interest of safety, applicant has proposed that public access to the immediate area of the reservoir be restricted and that the reservoir itself be enclosed by fencing.

Five saddle dams, or dikes, consisting of rock fill with earth cover, are necessary to contain the water in the expanded reservoir for the pumped storage project. Initially the applicant proposed a relatively straight line design for this construction. The plans have now been changed to a curvilinear design and the dikes will be landscaped to afford a natural scenic appearance to the finished reservoir. For all appearances, the reservoir will be no different from the many natural lakes in the area and will be visible only from the air.

---

[4] These provisions consist of strengthening the core of the dikes at the time of initial construction and thickening the steel in the penstocks. The total cost of these additions is approximately $1,800,000. Con Edison's vice-president stated that, even apart from the possible future expansion, this expenditure is justified as increasing the safety factor of the project at the 2,000,000 kilowatt level proposed and is acceptable to the applicant.

The Power Plant

The powerhouse, which is both a pumping and generating station, would be located on the west shore of the river at the base of Storm King Mountain. A total of eight pumping-generator units are scheduled for installation, three to go into operation in mid-1967 and the remaining five in 1968. The generators would have a combined nameplate capacity rating of 1,800,000 kilowatts and a dependable capacity of 2,000,000 kilowatts. When pumping, the powerhouse would draw approximately 17,000 cfs from the Hudson and, when generating, discharge between 25,000 and 27,000 cfs into the river and would operate under a static hydraulic head varying between 1,000 and 1,160 feet.

The powerhouse will extend approximately 30 feet above the river. The major portion of the powerhouse facilities, notably the turbine-generators, will be located underground or, rather, underwater. The plant will extend to a depth of 80 feet below the level of the river which is more than one-half mile wide in this reach. The plant will be approximately 800 feet in length.

Behind the plant at roof level will be located eight transformers, each with its accessory lightning arrestors. The transformers are relatively inconspicuous tank-like structures which will protrude less than 30 feet above the roof level. The only equipment on the roof will be a gantry crane approximately 70 feet in height used for servicing the generating units. This crane will be parked in a landscaped area at one end of the structure except for the rare occasions when it is actually in use. In addition, various switchyard apparatus will be located on a terrace area recessed inconspicuously into the existing slope of Storm King Mountain.

The powerhouse and upper switchyard will be at the base of Storm King Mountain well below Storm King Highway which now cuts across the mountainside at an elevation between 250 and 300 feet in the area planned for the plant. No excavation of the mountain above the existing cut for the highway will be necessary. The plant will be screened from the highway by foliage. Applicant has agreed that, following the construction, the area surrounding the plant and any other areas denuded in the building of the project will be suitably replanted under the direction of one of the country's leading firms of landscape architects. A 55 acre tract will be transferred to the Village of Cornwall for its use as a public park.

The powerhouse will be constructed on privately owned land within the boundaries of the Village of Cornwall which is now occupied by a number of buildings and other structures in varying stages of disrepair and decay.

Transmission Lines

The approval of the Federal Power Commission is not required for the construction of interstate transmission lines by public utilities, except in a situation such as is presented here where the lines are primary lines from a hydroelectric plant, that is to say, those lines which transmit the power from the hydroelectric project into the interconnected transmission grid of the company.

Initially Con Edison proposed to transmit the power from Cornwall by overhead cables across the Hudson River. It is now proposed that no transmission lines will be visible at the powerhouse and that the power will be routed by two 345-kv submarine circuits from the west to the east bank of the Hudson and then by underground cables for 1.6 miles to a switching station to be located at Nelsonville in the Town of Philipstown. From this point the applicant proposes the use of conventional EHV overhead transmission lines for the remaining stretch of 24 miles to Con Edison's system at its Millwood substation in the Town of New Castle and then along an existing right-of-way for 19 miles until it reaches the main transmission system at the Sprain Brook substation. The issues in this phase of the case are the routing of the line, the width of the right-of-way and whether it is feasible to place the line underground.

Issues

Insofar as the disposition of the issues in this case are concerned the controlling provision of the Federal Power Act is found in section 10(a), which provides that all licenses issued by the Commission for hydroelectric projects must comply with the following conditions:

> (a) That the project adopted, including the maps, plans, and specifications, shall be such as in the judgment of the Commission will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes; and if necessary in order to secure such plan the Commission shall have authority to require the modification of any project and of the plans and specifications of the project works before approval.

The jurisdiction of the Commission in this proceeding is not contested by any of the parties. The record clearly supports the examiner's findings as to the engineering and economic feasibility of the proposed project, applicant's ability to finance it, the adequacy of the project to perform the function for which it is intended and the need by Con Edison for ever expanding sources of energy supply.

The positions of the parties may be summarized as follows: The applicant obviously desires the Commission to approve the project as proposed by it, but as hereinafter indicated is willing to accept certain modifications if found necessary in the public interest. Scenic Hudson, a group which was formed shortly after the public notice of Con Edison's application was issued[5] and which describes itself as "an association of a number of groups and organizations which are interested in the protection of certain sections of the Hudson River Valley which it believes are unique from a scenic, historical and recreational standpoint in order to protect and preserve the resources for this and future generations to enjoy," contends that the Cornwall project would irrevocably mar the beauty of the Hudson River and that it is contrary to the public interest to sanction the construction of the project. It asks that the Commission deny the application as not meeting the "other beneficial public uses" standard of section 10(a) of the Act.

The Village of Cornwall, within whose boundaries the powerhouse of the project would be located and which would be the single community most vitally affected by the project, has intervened in support of the project. It sets forth the following claimed benefits to the community: (1) an increase in the assessed property valuation from the current $5,500,000 to an anticipated $45,000,000 or $50,000,000, thereby providing greatly increased revenues to the Village and to the school district; (2) the demolition and razing of a present unsightly shoreline to be replaced with a 55-acre recreational park on land acquired and donated to the Village by the applicant; (3) a redeveloped water supply system costing about $2,000,000 capable of providing more than twice the quantities of water presently available, in consideration of the flooding out of one of the present Village supply reservoirs by the upper reservoir of the project; and (4) lowered fire insurance rates as a result of the improvement in water supply. In addition, since the new water supply system to be paid for by Con Edison would include filtration facilities, the change would permit boating and fishing in Cornwall's other reservoirs, activities not presently feasible.[6]

---

[5] Scenic Hudson's representative has stated that while the Cornwall project provided the impetus for its organization it plans to remain in operation, irrespective of the final decision with regard to the project, to assist and work with other interested groups in the rejuvenation and restoration of the Hudson River Valley in the reach from approximately Bear Mountain Bridge to the City of Newburgh, New York.

The staff of the Commission supports the license application, claiming that the public interest will best be promoted by allowing Con Edison to construct and operate the Cornwall project.

The other interveners actively participating in the case and who have filed exceptions to the examiner's decision are the Philipstown Citizens Association, the Town of Putnam Valley and the Town of Yorktown. Each of these interveners is concerned not so much with the licensing of the project itself but with the characteristics, routing, and right-of-way of the project's transmission facilities.

In our view the authority granted to the Commission under the Federal Power Act is as broad as the public interest and is fully adequate to allow us to dispose of each of the issues in this case on its merits.[7] We have evaluated the project on this basis. The aesthetic considerations in particular have been carefully weighed because in appropriate cases, on a balancing of all factors, an application may and will be denied where construction of the project would seriously affect the natural beauty of the area.

It is clear from these contentions and the record that the real issue in this case is not primarily whether Con Edison has proposed a project which would serve its purposes better than any other (see Part III of this opinion) but, rather, whether the licensing of the project as proposed would be in the overall public interest. The problems which are presented may be considered under three headings. First are the scenic considerations on the Hudson River and in other areas which are raised by the project's facilities; the second is the transmission line problem; and third is a group of collateral questions including fish and wildlife protection, the safety of the project structures, notably the dikes forming the upper reservoir, the possibility of pollution to the water supply of the Village of Cornwall, the recreation plan for the project, and the project's effect upon navigation on the Hudson.

The Merits of the Project

Our task in this case is to balance the interests of the public in development of this site for the generation of power against any benefits to the public from retaining it in its present state.

Considerations which would favor development of this site are many. As a pumped storage site it is favored by nature. The value of such a site depends upon the "head" (the fall from the upper reservoir to the lower), location, and favorable construction features. Cornwall makes available a head of more than 1,000 feet, which is greater than any other site on the Hudson. It is located within 40 miles of New York City, central to a vast power pool and power market. A natural reservoir already in use can readily be enlarged to the required capacity by construction of saddle dams.

---

[6] The building of the plant would also contribute to the alleviation of the depressed employment condition now existing among the construction trades in Cornwall and its surrounding communities, particularly the City of Newburgh.

[7] See *Southern California Edison Co.*, Project No. 1930, 8 FPC 364, 385–386.

The primary benefit which will be realized from the proposed project is its economy and reliability as a source of power to meet Con Edison's peaking and emergency requirements. The undisputed proof shows that the Cornwall project would produce savings in the cost of electricity of over $12,000,000 each year as compared with a modern steam electric plant, the only practical alternative source suggested.

The Cornwall project would contribute to the abatement of the air pollution problem in the City of New York. It is true that 3 kwh of off-peak steam generation are required for every 2 kwh of peaking power produced by Cornwall. Nevertheless an appreciable reduction in the emission of gases and particulate matter will be achieved by permitting operation of Con Edison's existing and future thermal units at a steady level of output and also by the retirement of Con Edison's oldest and least efficient plants in New York City.[8] The project eliminates the need for cold starts and rapid loading of these steam plants, which result in poor combustion and the emission of large quantities of undesirable gases and solids. Moreover much of the pumping power for the plant in the future will be generated at plants outside New York City.

The benefits of the project would not be confined entirely to the area served directly by Con Edison. The availability of Cornwall power would enable Con Edison to assist other interconnected utilities in meeting their power needs, including those that render service in the Hudson River Valley area. These interconnections would also enable Con Edison to utilize off-peak economic energy from distant plants for pumping at Cornwall. Thus, the assurance of electric service reliability offered by the Cornwall project could be of advantage over a wide and densely populated area.

These advantages, however large, do not foreclose the question whether the project should be licensed. We must look also to the question whether it would do serious damage to the natural beauty of the area in question and its historic and recreational values, and determine whether the public interest would be better served by rejecting the project and leaving the site in its present state.

II

SCENIC, HISTORIC AND RECREATIONAL CONSIDERATIONS

For a better understanding of the scenic and recreational impact on each of the three major facets of the project, the reservoir area, the power plant area and the transmission line area, each of these will be discussed separately.

The Reservoir

As we have noted, the reservoir for the Cornwall project will be formed in a natural depression between the summits of two mountains, Mount Misery and White Horse Mountain. It will be visible only from the air. It will not flood any broad area of natural beauty or for that matter any houses or roads, or any of the precious and irreplaceable works of man which abound in the general area. The public will achieve a net gain of 80 acres of park land open to the public for recreation purposes in the vicinity of the reservoir. It is clear therefore that the reservoir could not in any way impair the scenic, historic or recreation values of the area.

---

[8] Con Edison has estimated that 750,000 kilowatts of existing thermal generating capacity will be switched from hot reserve to cold stand-by status with the advent of Cornwall power. This would consist of 500,000 kilowatts at the Hell Gate station, 200,000 kilowatts at Sherman Creek Station, and 50,000 kilowatts at other stations. This change will enable the complete shut down of the Hell Gate and Sherman Creek stations at an estimated saving of $2,850,000 in operating and maintenance costs.

The Powerhouse

The powerhouse for the Cornwall project is to be located on the river-front at the foot of Storm King Mountain and will be approximately 800 feet long. It will be 110 feet high but only some 30 feet will be above water or ground level. The powerhouse will constitute a large low-level building of concrete construction colored to blend with the natural rock of the mountain and will not be different from a water supply or other building normally located on the river front.

The powerhouse for the Cornwall project is basically different from a steam power plant and other industrial plants in that it will not have the obtrusive features usually associated with such structures. It will not have a tall stack releasing gases and particulate matter into the atmosphere, and it will not pollute the waters of the Hudson in any manner. The powerhouse will be a low-profile structure without the extensive and sometimes unsightly facilities necessary for the delivery and storage of fuels and supplies which are a part of steam plants and other industrial operations. It will not be a source of noise or of extensive vehicular traffic.

The powerhouse will be screened from the highway above by natural foliage, and the entire area surrounding the plant will be suitably planted.

One of the points made by Scenic Hudson is that the project will impair the view from the military reservation at West Point. Since Storm King Mountain is between the power plant and the military reservation, the power plant will be entirely out of sight to anyone standing on the reservation's grounds, and there can be no claim of scenic impairment from this source.

Another objection voiced to the project is the claim that the issuance of a license to Con Edison will open the door for the construction of other pumped storage developments along this reach of the Hudson River and general industrialization of the area. That other possible sites exist for pumped storage developments is not disputed; Con Edison's witnesses testified that they had considered other locations before selecting the Cornwall site as the one best suited for development. Applicant has stated that it has no plans for other hydroelectric power projects along the Hudson in this area. Whether applications for similar projects on this waterway will be filed by other companies in the future is not yet known. None have been filed to the present time. Furthermore, we do not see why construction of the project would lead to further industrialization in the area. Con Edison is building this project to supply its own service needs in New York City and its environs, not to supply cheap power for industrial purposes in the area of the project. It should also be noted that because the project will produce only peaking and emergency power it would not be a suitable power source for industrial plants. Thus, the project does not add any incentive for further industrialization of the area. In any event, this is a matter which is properly within the control of the state and local governments and over which we have no jurisdiction.

Con Edison will acquire a parcel of land extending about 4,000 feet along the west bank of the river to the north of the power plant. This ground will be used during the construction period for the deposit of surplus material excavated from the tunnel and powerhouse site. Upon completion of the construction phase, the property will be graded and replanted and then transferred to the Village for its continued use and enjoyment as a 55-acre public park. Con Edison also has offered to assist the authorities of the Town of Philipstown in cleaning up its river front in the area across the river from the project by a similar use of spoil from the construction on the west shore in order to create an improved waterfront along both sides of the Hudson.

We have observed that the powerhouse area is not used for any recreation purposes at present. The Cornwall Yacht Club and a small marina are located directly north of the powerhouse site. The use of these facilities will not be affected in any manner by the construction or operation of the project.

The proposed powerhouse will not involve the destruction of any historical shrines and its effect on the general scenic values of the area will be minimal. The powerhouse will merely add a well landscaped, low profile structure to the structures already in existence within the Cornwall area and visible from the river and from the opposite shore of the Hudson. It will not alter the existing environment in any conspicuous or unsightly way, and if anything, will enhance public recreation in the area.

Transmission Lines

The area of maximum scenic and historic interest with which we are here concerned is the general vicinity of the Cornwall powerhouse. The problems connected with the transmission lines, which will be discussed, *infra*, do not involve the same scenic and historical values as are at stake in the vicinity of Storm King Mountain. There are, however, substantial problems in connection with locating the transmission lines which cannot be resolved on the basis of the evidence presently in the record and which, as hereinafter brought out, requires remanding this phase of the proceeding for the development of additional evidence.

The transmission facilities as originally designed raised a serious problem with respect to the scenic values in the powerhouse area. Con Edison planned to erect the project switching station at the plant site and to transmit the power across the river by means of overhead lines. By the time the initial license application was filed on January 23, 1963, these plans had been changed and Con Edison proposed in its application that the Cornwall power be transmitted through two 345 kilovolt submarine circuits crossing under the river. The modification from overhead to submarine transmission for the river crossing increased applicant's transmission line cost by approximately $6,500,000.

The original plans were changed still further when Con Edison amended its application on September 13, 1963, to provide for erection of the Cornwall East Switching Station on the east side of the river at Nelsonville in the Town of Philipstown. This revision eliminated another stretch of overhead transmission lines in this scenic area. As now proposed, the submarine cable will be connected at its outlet to approximately 1.6 miles of underground cable which will carry the power downriver for about 5,000 feet along the east shore and then to the switching station lying about three-fourths of a mile inland, beyond the crest of the ridges rising from the river. Conversion of this short stretch of line from overhead to underground construction will add an additional $6,000,000 to project costs.

Con Edison indicated that the changes in the river crossing plan were prompted by the objections of those persons opposing transmission facilities within view of the river and by its desire to preserve the scenic values along the shoreline. These changes have eliminated any adverse impact of the project's transmission lines on the scenic values of the area since in no event will the lines be visible leaving the powerhouse, crossing the river, or for three-quarters of a mile inland. The contention has been made that the lines in Philipstown will impair the cross-river view from West Point. It is apparent that even if the transmission lines could be seen from the reservation grounds over a mile away, at that distance the lines would not seriously impair the view and only someone searching with binoculars could possibly see them.

Conclusions on the Scenic Issue

This Commission is of course not a newcomer to the conservation field. The Federal Water Power Act was the culmination of a long and hard fight by conservationists in the early 1900's to assure that the nation's water resources would be conserved by development for the benefit of the nation. As the Supreme Court observed in *First Iowa Hydro-Electric Coop* v. *F.P.C.*, 328 U.S. 152, 180–181 (1945) the Federal Power Act of 1920:

> was the outgrowth of a widely supported effort of the conservationists to secure enactment of a complete scheme of national regulation which would promote the comprehensive development of the water resources of the Nation, insofar as it was within the reach of the federal power to do so, instead of the piecemeal, restrictive, negative approach of the River and Harbor Acts and other federal laws previously enacted.

The Commission has been carrying out this role for almost five decades. In this case we have the difficult task of balancing the need for the development of our waterways to supply the growing demand for electricity and other project purposes against the desires of many citizens to preserve the natural landscape intact. The overall answer to this problem of conflicting needs is not susceptible to a cut and dried solution.

This Commission can and will deny a license in order to preserve the natural beauty of an area when the facts support such a conclusion. For example, in 1951 a hydro company applied for a license to construct a dam and hydroelectric project on the Namekagon River in Washburn County, Wisconsin.[9] The evidence showed that the Namekagon River was essentially a free-flowing stream located in one of the principal recreational areas of the nation and that in its natural state the section of the river involved was extensively used for fishing and canoeing. It was also found that these recreational aspects would be destroyed by the power project. In these circumstances the Commission denied the license application under the "other beneficial public uses" provision of section 10(a), even though the project appeared to be otherwise economically feasible.

The *Namekagon* case was a strong case on the facts and we would not want to be understood as holding that only where all the factors there involved were present would we deny a license because of scenic or other aesthetic considerations. Nevertheless, a comparison of the factors present in the *Namekagon* case with the facts here under consideration indicates the basis for our conclusion that, on balance, the license should be granted. In the cited case, the project would have directly affected and destroyed the recreational value of the river and would have deprived large numbers of our population of a unique source of pleasure which they had used for many years. The Hudson River Valley is also noted for its scenic beauty and admired not only by the local residents but by anyone who has had an opportunity to traverse it. However, as our previous discussion makes clear the Cornwall project will not substantially affect its beauty or its historical monuments, nor will it destroy or substantially impair the Valley's recreational potential.

We find that the impact of the project upon scenic resources will be minimal, that it will create additional recreational opportunities, and that its advantages for power supply purposes far outweigh any negative considerations. In these circumstances and viewing sympathetically the case made by Scenic Hudson, we cannot conclude that the Cornwall powerhouse substantially impairs the scenic, historic, or recreation values in the area. Whatever may be the negative aspect of adding this powerhouse at the foot of Storm King Mountain, on balance we do not believe it outweighs the public interest in the effective utilization of an unusually fine pumped storage site.

---

[9] *Namekagon Hydro Company,* Opinion No. 257, 12 FPC 203, affirmed *Namekagon Hydro Co.* v. *F.P.C.*, 216 F. 2d 509 (CA7-1954).

Our judgment in this case, however, cannot rest solely on our evaluation of the Cornwall project. To be licensed, the project must meet the statutory test of being "best adapted to a comprehensive plan for improving or developing a waterway." In applying this test we must compare the Cornwall project with any alternatives that are available. If on this record Con Edison has available an alternative source for meeting its power needs which is better adapted to the development of the Hudson River for all beneficial uses, including scenic beauty, this application should be denied.

III

ALTERNATIVES TO THE PROPOSED PROJECT

We come now to a consideration of the various alternatives. Con Edison provides electric service to the five boroughs of New York City and to a major portion of Weschester County, New York. Its service area is the most densely populated metropolitan center in the United States and a principal hub of national activity. It is not necessary to belabor the fact that interruptions in electric power supply to New York City must be minimized. Reliability of service is a matter of primary public concern.

A principal operational problem confronting Con Edison in meeting its load requirements without interruptions stems from the unusually high hourly fluctuations in its load. On a recent day the measured consumption was 1,600,000 kilowatts at 5 a.m. and by 9 a.m. the consumption had risen to 4,200,000 kilowatts. Peak loads on the Con Edison system are growing at an average rate of 300,000 kilowatts per year. Between 1963 and 1964 they increased 400,000 kilowatts. The presently anticipated peak load in 1968 is approximately 6,700,000 kilowatts, a 31 percent increase over the 1963 peak.

The evidence establishes that Con Edison's present capacity, including that now under construction, will be insufficient to supply the peak load reasonably expected in the summer of 1967. It is to meet this anticipated shortage that the initial generation at the Cornwall project has been planned by Con Edison to begin in mid-1967.

As we have previously observed, a pumped storage project is well suited to meet applicant's need for additional peaking power. However, there are other means by which Con Edison can obtain additional power to meet its continually increasing load which should be considered before a license is granted.

Alternative Pumped-Storage Site

Before discussing the various alternative methods of generation actually proposed by Scenic Hudson, it is appropriate first to consider whether an alternative location for a pumped-storage plant outside of the scenic highlands area could supply Con Edison's power requirements just as well as the proposed Cornwall project.

The National Power Survey Report points out that (p. 123):

> Pumped storage peaking projects are usually economical only when relatively high-head high-capacity projects are developed. They will, therefore, be restricted largely to those areas where the terrain is favorable and where they can be used in large interconnected systems.

The evidence is conclusive that there is no site along the Hudson River which approaches the favorable characteristics of the Cornwall location. Applicant's witness testified that a number of other possible sites had been studied but that none would have provided the very high head and peak power generation capability available at the Cornwall location. The second best site would have provided a head of only 600 feet compared to the 1,160 feet available at Cornwall and would have produced a power capability of 600,000 kilowatts, only one-third of the peak power required by Con Edison which will be produced by the Cornwall project. Moreover, this inferior alternative is also located in the same general area of the Hudson Highlands. It is therefore understandable that the parties opposing Cornwall on scenic grounds did not suggest that an alternative pumped-storage site would meet Con Edison's needs. It is apparent that any site that would eliminate the scenic problem would also virtually eliminate the possibility of a pumped-storage development.

Power Purchased from Interconnected Systems

Con Edison is already interconnected with all the major utility systems in New York State. A 345-kilovolt line is under construction to connect with the Connecticut Light and Power Company. A connection with Public Service Electric and Gas Company of New Jersey, designed for ultimate operation at 345 kilovolts, recently has been placed in operation. Future plans include a 345 kilovolt interconnection with the Keystone Project owned by utilities in Pennsylvania, Maryland, New Jersey and New York which consists of large steam plants located in the Pennsylvania coal fields. The present and contemplated interconnections are useful in distributing the available power supply in an economic manner and in permitting Con Edison to take full advantage of seasonal, daily or hourly diversities which may exist among the various companies' loads. However, Con Edison is relying fully upon such interconnections in estimating its future available capacity. They will help make the Cornwall project even more beneficial, but they cannot be an economic source of the large amount of additional power which Con Edison needs in the near future to meet its peak loads.

Efforts have been made to obtain a supply of hydroelectric power from Canadian sources. Negotiations for this source of supply have been going on for some years, but so far they have been inconclusive. Although the availability of this power would be of use to Con Edison in supplementing its peaking requirements during the summer months, due to the diversity in peaking capacity such as the Cornwall project is designed to furnish. As stated in the record, the possibility of a future Canadian interconnection is too uncertain for reliance at the present time, and, in any case, it would not fulfill Con Edison's needs for peaking power.

Nuclear Plants

Nuclear generation of electricity has made great strides in the last decade and there are now more than a dozen nuclear plants in operation with five more presently under construction. Con Edison presently operates one of the largest such plants in existence with a capacity of 255,000 kw [10] located at Indian Point, New York. Due to their relatively high initial cost and their operating characteristics, nuclear plants must be operated at a high load factor if they are to produce power at reasonable unit costs. Thus, while it may be that a nuclear plant could be efficiently utilized to meet base load requirements, such a plant would not meet Con Edison's need for peaking power. On the contrary, a nuclear plant is perhaps the least suited of any to meet applicant's need for peak-period energy. Moreover, we are here speaking of a plant with a capacity of 2,000,000 kw which is eight times as great as the applicant's existing nuclear plant, and more than twice as large as any nuclear plant now under construction.

---

[10] Approximately two-thirds of the capacity is fired by a nuclear reactor and one-third by an oil superheater.

It may be added that approval of the location of nuclear plants is in itself not free from difficulty as indicated by the fact that Con Edison's recent effort to build such a plant in New York City was ultimately abandoned before final decision was reached by the Atomic Energy Commission whether to permit such an installation at the chosen site.

Conventional Steam Plants

Of all the alternatives, new conventional steam capacity would perhaps be the most economical and the one which would involve the least delays and uncertainties. Nevertheless it is far from equalling Cornwall for Con Edison's purposes, and we have found no basis for rejecting the evidence that it would involve additional costs of at least $12,000,000 a year, without Cornwall's advantages of superior dependability and of minimizing the problem of air pollution.

Scenic Hudson Preservation Conference presented three alternatives as possible sources for the additional peaking and emergency capacity needed by applicant. These alternatives were a stripped-down steam turbine reserve plant and two different types of gas turbine jet power plants. However the evidence reveals the steam turbine power plant would produce peaking power at a total cost as high or higher than the Cornwall project and would have the serious disadvantage that it could not be used as continuously available reserve as the Cornwall project can without the incurrence of prohibitive fuel costs. Moreover, the witness testified that no stripped-down steam turbine reserve plant comparable in size to the Cornwall project had ever been built. As we have observed in the National Power Survey Report (p. 124):

> * * * Acceptance of these peaking units by the industry has been slow. With few exceptions to date, installations of more efficient units for base load operation has been generally more economical, the older less-efficient units being used for peaking.

The jet engine plants would have all of the drawbacks of a stripped-down steam plant and the additional problems of extreme noise and even higher generating costs per kilowatt-hour than the other alternatives.

To the extent that certain of the units could be operated on natural gas, the utilization of such gas supply, in the quantities which would be needed, for boiler fuel or for the generation of electrical energy by means of gas turbines, would raise serious policy considerations.[11] It should also be noted that while Con Edison's maximum peak-day demand occurs during the summer, it has a substantial peak demand during all months of the year. Thus, the suggestion that applicant could use natural gas fueled gas turbine generators would require that Con Edison contract for a firm gas supply, available on demand during all times in the year, whether used to its maximum on any particular day or not. This would be a far cry from the usual form of industrial gas supply where a reduced price is granted on condition that the interstate pipeline supplier is free to interrupt deliveries during its own periods of peak demand. It is apparent, therefore, that any such firm gas supply would be prohibitively expensive to Con Edison and to its consumers.

---

[11] *F.P.C. v. Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1.

Gas turbines or jet engine plants may be advantageously used by small systems having a need for small amounts of peaking capacity or on systems where no other source of peaking power is readily available. The record is clear that this cannot be considered a reasonable alternative to the construction of the Cornwall project for meeting Con Ed's needs for 2,000,000 kw of peaking capacity.

Summary of Alternatives

After reviewing all of the alternative suggestions and the evidence in the record we must conclude that the proposed project fully meets the applicant's need for additional capacity for peaking and emergency purposes in a manner that is far superior to other possible alternatives. Indeed, were it not for the effect upon scenic values we doubt that anyone would challenge the fact that applicant has proposed an apt solution to its problem of providing additional power supply for the needs of its New York market.

IV

THE TRANSMISSION LINES BEYOND NELSONVILLE

The dispute in regard to the transmission lines has centered on the question of how best to deliver the power south and east a distance of approximately 24 miles beyond the Cornwall East Switching Station at Nelsonville in the Town of Philipstown, where the underground cable is proposed to stop, to the point where the primary line reaches Con Edison's substation at Millwood in the Town of New Castle and then would continue by overhead transmission on an existing right-of-way. Both Con Edison and the staff have recommended a 345 kilovolt double circuit overhead transmission line initially and provision for an additional 345 kilovolt line in the future, should an expansion of the project be undertaken.

At the hearings in May 1964, Con Edison presented its proposed plan of the transmission system. These included the submarine cables under the Hudson River, the 1.6 miles of underground cables along the river bank on the east side of the river and inland to the Cornwall East Switching Station at Nelsonville, and a double circuit overhead line running east and south through the Towns of Philipstown, Putnam Valley and Cortlandt to an intersection in Cortlandt with an existing right-of-way, and then southeast along this right-of-way to the Millwood substation. From Millwood the lines would run south on the existing right-of-way to Con Edison's Sprain Brook substation in Westchester County.

Con Edison estimated the cost of the transmission facilities which it proposed at $32,020,000. This cost included $9,830,000 for the submarine cable, $2,300,000 for the basic Cornwall East Switching Station, $6,580,000 for the 1.6 miles of underground cable and the incremental substation costs which such a cable would require, $8,020,000 for the 23.4 miles of overhead transmission line between the Cornwall East Switching Station and Millwood plus $340,000 of allocated right-of-way costs, and $4,950,000 for approximately twenty miles of overhead transmission from Millwood to Sprain Brook.

At the request of the Commission staff, Con Edison estimated the total cost of underground construction the entire distance from the east bank of the Hudson River to the Millwood substation, approximately twenty-three miles. The cost of the transmission facilities required for such an underground installation was estimated at $99,850,000, as contrasted to $14,600,000 which was the comparable cost of the overhead installation proposed by Con Edison, a difference of over $85,000,000.

In response to cross-examination by Scenic Hudson, Con Edison also estimated the total cost of underground transmission from the east bank of the Hudson River, at the terminus of the submarine cable, to a point on Con Edison's existing right-of-way between its Indian Point Nuclear Generating Station, on the eastern shore of the Hudson River in Westchester County, and its Millwood substation with transition at that point to overhead transmission for the remaining distance.[12] This would entail a total of approximately 18.6 miles of underground cable installation. The cost has been estimated by Con Edison at $85,448,000, which is $68,548,000 greater than the comparable cost of the overhead installation proposed by Con Edison.

Under Con Edison's original proposal, the overhead portion of the transmission line would commence at the Cornwall East Switching Station in Nelsonville and then proceed generally easterly through valleys in a hilly section in the Town of Philipstown toward McKeel Corners; the line would then run southeast, through Clarence Fahnestock Memorial Park, and then south through the Town of Putnam Valley to the Putnam-Westchester County line, which would be crossed near the outskirts of the City of Peekskill. The line would then proceed through a highly developed area in Peekskill to an intersection with Con Edison's existing right-of-way running easterly to Millwood from the Indian Point Nuclear Generating Station. The route as proposed would have required the acquisition of approximately 18.6 miles of new right-of-way, 250 feet wide, between the east bank of the Hudson and the point at which the transmission line would intersect the existing 400-foot wide right-of-way between Indian Point and Millwood. No additional right-of-way would be required beyond this point.[13]

Con Edison indicated that the overhead transmission line route which it proposed represented an earnest effort to locate the transmission facilities in a manner which would cause the least possible interference to the interests of local communities and property owners. The line would traverse generally wooded and sparsely settled areas wherever possible. Since transmission lines are most noticeable when erected along the crests of hills, the route selected would, wherever feasible, follow along contour lines at the base of hills, where the vegetation would be heaviest. The route would follow valleys and draws to the maximum extent possible where it was necessary to cross ridges.

The staff, after extensive study of the entire area, proposed a different route for the portion of the project transmission line between Nelsonville and Millwood, east of that suggested by Con Edison. This route would proceed about 10 miles along new right-of-way through the Towns of Philipstown and Putnam Valley to a point in the latter where the project transmission line would intersect a right-of-way presently owned by Con Edison and already occupied by two existing transmission lines. These existing lines are a recently placed 345 kilovolt double circuit line which is part of Con Edison's principal interconnection with Niagara Mohawk Power Corporation and other upstate New York

---

[12] An overhead line designed for 220 kilovolts but now operating at 138 kilovolts was constructed on this right-of-way by Con Edison a few years ago in connection with the construction of its Indian Point plant in the Village of Buchanan and Town of Cortlandt. The Town of Cortlandt, which objects to overhead lines in this proceeding, granted the zoning and other municipal consents required for the Indian Point plant and overhead line. In 1961 Con Edison and Orange and Rockland Utilities, Inc., which serves areas on the west side of the Hudson River opposite Indian Point, jointly constructed an overhead transmission line crossing of the Hudson River between Indian Point and Orange and Rockland's Lovett Generating Station.

[13] This existing right-of-way, as well as the proposed route, is shown in exhibit No. 30.

and New England power companies, and a 138 kilovolt double circuit line installed in the early 1930's which served as the only interconnection between the systems of Con Edison and Niagara Mohawk until the 345 kilovolt line was placed in operation in 1962. Staff's witness proposed a point of intersection with the existing right-of-way in the vicinity of the Carmel substation owned by New York State Electric and Gas Corporation, located about 14 miles north of Millwood. He indicated that the power could be carried south from Carmel through Yorktown to Millwood on a new right-of-way or by conversion of the existing 138 kilovolt double circuit line to a 345 kilovolt double circuit line. The staff witness testified that except for the Yorktown segment the alternative route would traverse a relatively underdeveloped and sparsely settled area and would avoid a number of highly developed areas which would be encountered along Con Edison's proposed route, particularly in its passage near the City of Peekskill. He further stated that, although his alternative route would be somewhat longer than under Con Edison's proposal, the amount of new right-of-way would be reduced. Finally, he indicated that the total cost from East Cornwall Switching Station to Millwood would be less by the alternative route.

It should be noted that the witness' comments regarding the shorter stretch of completely new right-of-way under staff's proposal (10 miles as against 18.6 miles for Con Edison's route) is predicated on a rebuilding of the 138 kilovolt line to 345 kilovolts or, if the 138 kilovolt line remains in place, on the ability of Con Edison to run the 345 kilovolt lines from the Cornwall project within the confines of the existing 200-foot wide right-of-way. If additional right-of-way were allowed between Carmel and Millwood, staff's route would exceed Con Edison's in the amount of new right-of-way required.

Con Edison, at least initially, opposed the route proposed by staff. In its brief it stated: "The route suggested by the Staff, as well as a number of other routes, had been considered by Con Edison and had been rejected as uneconomic and as imprudent system planning." It would appear, however, that its primary opposition to the staff's proposed route lay in the suggestion for the rebuilding of the 138 kilovolt line to 345 kilovolt operation as a means of transmitting the Cornwall power. Applicant stated that it would offer no objection to the alternative route, if determined best by the Commission, provided that the Carmel to Millwood section were situated on a new 250-foot width right-of-way paralleling and adjacent to the existing way. At the oral argument held before the Commission on November 17, 1964, Con Edison stated that the full 250-foot width of new right-of-way on this section may not in fact be necessary on its entire length and that some reduction, "possibly to 125 feet," could be allowed without unduly impairing its ability to transmit power from Cornwall.

Con Edison, in the course of the proceeding, suggested many reasons why it should not be ordered to replace the 138 kilovolt line with 345 kilovolt facilities as a method of transmitting the Cornwall power. Perhaps the most persuasive reason is that Con Edison claims that if it were required to rebuild the 138 kv line between Carmel and Millwood to 345 kv, the total transmission line cost from Cornwall East to Millwood would run as high as $16,837,000, approximately double the cost of carrying the power lines down a widened right-of-way. Furthermore, there would be no provision for transmitting the additional power if Cornwall were expanded to its 3,000,000 kw ultimate capacity.

Philipstown Citizens Association does not oppose the construction of the Cornwall project but objects to the erection of any part of the transmission line overhead within its boundaries, although it concedes that the route suggested by the staff would travel through a sparsely settled area. Putnam Valley, Yorktown and Cortlandt likewise object to allowing Con Edison to run its overhead transmission lines for the Cornwall project through their respective townships.

In its exceptions Philipstown points out that the project would produce savings of at least $12,000,000 annually over any possible alternative and suggests that the basic question in the case should be recast to read, "How far can this transmission line be brought underground and still leave the project economically feasible?" Answering its own question, it says that the Commission should order the lines placed underground through the entire town of Philipstown. As the examiner notes, however, there would be no justice in having the line placed underground as it passes through one jurisdiction or community and overhead through the others. Indeed, such a conclusion, in the absence of some clear and compelling reason therefor, would be patently discriminatory.

An estimate of the extremely high additional costs involved in running an entirely underground cable from the terminus of the submarine cable either to Millwood or to an intersection with the Indian Point right-of-way has been set out earlier. An underground line for the 10 miles from the Cornwall East Switching Station to the point adjacent to the Carmel substation where the line would intersect the Pleasant Valley to Millwood right-of-way would alone add more than $30,000,000 to the cost of the project and would still not provide comparable relief for Yorktown.

It must be recognized that overhead high voltage transmission lines are a fact of life in today's world in which the demands for electric power are constantly growing. Considerations of air pollution as well as economy dictate that in the future even more than in the past electric generating sources must be built at a distance from metropolitan centers, necessitating transmission hauls to markets. We do not mean to minimize the problems associated with overhead transmission lines traversing populous areas or cutting a swath through areas of natural beauty. There is a great public interest in the additional research which is badly needed to accelerate the rate of progress in developing economical underground transmission lines. At present, however, the cost of underground transmission lines at high voltages (and extra high voltages) is still enormous, and the differential as compared with overhead construction is prohibitive except for short distances. The Commission is convinced that to require underground transmission for this entire project would dissipate its economic benefits for power consumers with little commensurate public gain. In this age of electricity, overhead high voltage transmission lines, particularly in rural areas, will continue to be a necessary part of the American scene for many years to come. We do not believe that there is any real dispute on this point and that our task on this aspect of the case is to minimize the adverse impact on the affected communities without destroying the economy of the project.

In summary we find that on the present record no satisfactory and sufficient reason has been shown why Con Edison and, in the final analysis, its consumers, should be required to absorb the extravagant additional costs entailed for more underground cable installation in view of the limited impact which the lines will have upon the area involved.

The Commission has been impressed by the arguments and evidence submitted by Yorktown and is concerned with the effect which the allowance of an additional width to the existing right-of-way through the town as proposed by staff would have on its inhabitants and upon its plans for future development. We are also aware of the necessity, under staff's proposal, for the running of the overhead transmission lines across state park lands.[14] To limit Con Edison to its existing right-of-way through Yorktown would add more than $8,000,000 to the cost of the project and make no provision for future expansion. Finally, it is apparent that the adoption of Con Edison's initially proposed route will have an effect on established residential communities within the Town of Cortlandt which has not been adequately developed in the record.

In our opinion the evidence which is presently in the record now before us does not permit the Commission to make the informed determination called for under Section 10(a) in regard to the specification of the route and amount of required right-of-way for the primary transmission lines. Of significant importance, in our opinion, is the absence in the record, or the inadequacy, of information in regard to Con Edison's future interconnection plans; its plans, if any, for upgrading existing transmission lines to higher voltages; and of its existing transmission line grid in this general area and its future plans. Without a thorough knowledge of this material and a more complete development of the various alternative routes for transmitting the Cornwall power, we cannot be certain that any of the present proposals provide the best solution for the transmission problem. Each of the present proposals contain important deficiencies which further study may well alleviate. We believe that the public interest requires, therefore, that this phase of the proceeding be reopened and that the case be remanded to an Examiner for the presentation of additional evidence on this subject and for the development of the best possible route for transmitting the Cornwall power. Accordingly, our order herein will provide for the holding of additional hearings on this issue and for the presentation of any evidence as may be relevant thereto. Pending our final decision thereon, no route for the overhead transmission facilities beyond Nelsonville will be specified.[15] It is our hope that Con Edison and the staff will use the additional time made available by our present decision to good advantage to reexamine completely their transmission line proposals and to present the route most in accord with the public interest. Such proposal, or proposals, should be planned so as to avoid crossing state park lands and minimize scenic impairment and economic losses.

Our decision not to license any particular transmission line route at this time has no effect upon our approval of the license for the remainder of the project works, which we are satisfied are desirable in the public interest. This will not delay the initiation of construction in the powerhouse, tunnel and upper reservoir areas of the project.

---

[14] As planned, staff's proposed route would have passed over privately held land between two separate sections of the Clarence Fahnestock Memorial State Park in the Town of Putnam Valley. Con Edison, in its brief in opposition to the exceptions of the parties to the initial decision, reports that since the close of the record this intermediate parcel has been sold by the owners for use as state park lands and that title vested in New York State on August 31, 1964. Our specification of this route would require Con Edison to obtain an easement of approximately 7,000 feet in length and to a width of 250 feet over these state lands.

[15] The question of what transmission facilities should be included in the license, and the description thereof, has been deferred in other cases. See, for example, *Idaho Power Co.*, project No. 1971, *et al.*, Opinion and Order Issuing License, Opinion No. 283, 14 FPC 55, 79, 82; *affirmed* 237 F. 2d 777 (CADC-1956); cert. denied 353 U.S. 924; Order Further Amending License (approving transmission facilities), 21 FPC 361, 22 FPC 1001, 24 FPC 37, 1066, 29 FPC 404. *Power Authority of the State of New York*, Project No. 2216, Order Issuing License, 18 FPC 344, 19 FPC 186; Order Approving Transmission Line, 20 FPC 823; *City of Seattle, Washington*, Project No. 2144, 26 FPC 54, rehearing denied 26 FPC 463, *Affirmed sub nom. P.U.D. No. 1 of Pend Oreille County, Washington* v. *F.P.C.*, 308 F. 2d 318 (CADC-1962), cert. denied, 372 U.S. 908, rehearing denied, 372 U.S. 956.

V

OTHER ISSUES

Protection of Fish

Applicant plans to install fish screens on the relocated railroad trestle to exclude fish from the project intake structures. The design of the proposed fish screens has been submitted to the Fish and Wildlife Service of the United States Department of the Interior and to the New York State Conservation Department, a body which is responsible for the fish and wildlife protection activities of the State of New York. The Fish and Wildlife Service indicated that its major concern in connection with the project lay in the possibility that fish might be sucked into the intake when the plant is pumping water to the reservoir. It stated: "Screens or other devices to prevent the fish from being carried into the pumps should be installed. The applicant, the United States Fish and Wildlife Service, and the Division of Fish and Game of the New York State Conservation Department should cooperate in the design of the required fish screen or exclusion device. The applicant recognizes the need for a fish-screening device and has had experience with its Indian Point intake facilities. The fish-screening device should be constructed simultaneously with other project features."

The Fish and Wildlife Service suggested that any license issued for the project include adequate provisions to remedy any presently unforeseen or unaccounted for circumstance occurring after the plant begins operation which produces an unwarranted impact on existing fish or wildlife resources. The Secretary of the New York State Water Resources Commission, which, among other members, includes the head of the New York State Conservation Department, testified that the Commission was not generally opposed to the development of the project proposed by Con Edison. In regard to the fish protective facilities he stated:

> Relative to the preservation and enhancement of fisheries resources, it is requested that the applicant be required to provide assurances that adequate barrier facilities will be installed and maintained at the intake works to prevent the loss of fish.
>
> The applicant has had plans for a fish barrier screen prepared. Technical staff members of the Conservation Department's Division of Fish and Game have reviewed these plans and they appear to be adequate to prevent loss of adult fish of the species concerned. In our opinion the possibility still exists that extensive losses of eggs and/or young of valuable species might occur after installation of the proposed screening devices. Therefore, we request you to require the applicant to take full responsibility for making needed practicable additions, improvement, or alterations if investigations disclose inadequacies of devices installed for fish screening purposes.

The question of whether operation of the proposed project would have an adverse effect on the fish resources of the Hudson River was explored during the hearing. Dr. Alfred Perlmutter, an Associate Professor of Biology at New York University School of Graduate Studies and an outstanding ichthyologist, testified on the fish problem and stated that in his opinion the Cornwall project would not serve as an attraction for fish and that its operation would have no appreciable effect on fish, fish larvae, or fish eggs. He indicated, however, that actual operating experience might show that a screen mesh smaller than planned would prove preferable. During cross-examination he distinguished the situation at Indian Point, where a high temperature differential and a river dock constitute attractions for the fish, from that which would be present at the Cornwall plant where there would be little temperature variation and no physical structure to attract the fish to the vicinity of the powerhouse.[16]

It would appear that the facilities now planned for inclusion in the project should be adequate to assure suitable fish protection. However, in view of the comments submitted by the Fish and Wildlife Service of the Department of the Interior and the New York State Conservation Department, and in compliance with their desires as the agencies charged with the responsibility of fish and wildlife resource protection, we are including a special condition in the license to require the company to consult with the U.S. Fish and Wildlife Service and the New York Conservation Department, Division of Fish and Game in the final design of the fish screening facility; to construct, operate and maintain such facility in a satisfactory manner; to pay for the costs of evaluation studies to determine any effect of the project on the Hudson River fishery; and to make any reasonable modification of the screens in the interest of protecting fish which the Commission may direct.

Standard Article 16 (Form L-4, revised June 1, 1964, 32 FPC 839) dealing, among other things, with the future modification of project structures for fish and wildlife protection after notice and opportunity for hearing, is included in all licenses issued by the Commission for projects affecting navigable waters.[17] Since it affords better protection for fish and wildlife than the provision recommended by the examiner, it will be substituted for Article 39 in the examiner's initial decision. This Article 16 will afford ample opportunity to interested Federal and state agencies to bring before the Commission any suggestions for reasonable modifications in the protective devices as may become apparent from actual experience in the operations of the Cornwall plant and for the holding of a hearing at which all such interested agencies, as well as others, whether parties to this proceeding or not, may participate. Should any modifications to the project or its operations be shown to be necessary and desirable, consistent with the purpose of the project and the provisions of the Federal Power Act, they may and will be ordered by this Commission in the exercise of its continuing responsibilities under the Act. We may note that the substitution of Standard Article 16 for Article 39 is in accordance with a request by the U.S. Department of the Interior.

In January 1965, after the time which had been allowed for the filing of petitions to intervene and subsequent to the hearings, the initial decision and the oral argument, a number of petitions to reopen the proceeding for the submission of additional evidence regarding the fish problem were received. These petitioners contended that studies of the fish resources of the Hudson River not in record show that the project will adversely affect fish, particularly fish larvae and fish eggs. These petitions have been denied as untimely. In keeping with our continuing authority under the license to require the applicant to take all necessary measures for the protection of fish, however, and in view of the opportunity offered by the reopening of the record on the transmission phase of the project, we find that it is in the public interest to provide also at that time an opportunity for interested persons to submit additional evidence concerning the design of the fish protection devices. Our order herein so provides.

---

[16] Dr. Perlmutter stated that he is currently engaged in a study of a fish-kill problem which has arisen since the beginning of operations at the Indian Point nuclear plant, an activity which is outside the jurisdiction of this Commission.

[17] Article 16 of Form L-4 reads as follows: "The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act."

Safety Considerations

The safety of the proposed dikes was considered at great length during the hearing and the uncontradicted evidence supports a conclusion that the dikes will be completely safe. The largest dike in volume of construction materials will be dike No. 1 which will be 2,000 feet in length and located on the west side of the reservoir. This dike would have its foundation approximately 900 feet above sea level and its crest at an elevation 1,170 feet above sea level. The longest dike (No. 3), located in the northeast sector of the reservoir will be about 2,700 feet in length and will be the second largest dike in volume. We are requiring that the elevation of the dike facing Clove Creek be at least 3 feet lower than the other dikes so that it can serve as an overflow spillway in the event of an emergency. As brought out in the examiner's decision, various automatic and semi-automatic devices will be installed at Con Edison's Energy Control Center in New York City, the Indian Point Control Station and at the project itself to give ample warning of any overfilling of the reservoir and to automatically shut down the pumping units.

Although the examiner found that there will be no danger of seepage of any significant quantities of Hudson River water out of the project reservoir, he required, and Con Edison has agreed to, the installation of observation wells in the vicinity of the dikes to measure any seepage that may occur, and to sample the water in wells, ponds and streams in the area, all with a view to safeguarding the quality of the local water supplies. The decision also requires applicant to take appropriate measures to correct any conditions of significant seepage, and, if necessary, to compensate any parties who may be damaged thereby. This condition will be retained in the license issued in the order accompanying this decision.

Cornwall's Water Supply

The continued adequacy and even improvement in the water supply of the Village of Cornwall is assured in the project's plans. As brought out by the examiner, an engineering firm with long experience in community water supply was hired to conduct studies looking to the Village's existing and reasonably foreseeable water requirements and to plan the redevelopment of its water system. The plans prepared on the basis of these studies have been approved by the governing council of the Village and by the New York State Water Resources Commission. The construction cost of these plans, estimated to be $2,000,000 or more, will be borne exclusively by Con Edison as compensation for the loss of one of the five reservoirs now supplying water to the Village. Furthermore, the filtration system which is to be installed in connection with the utilization of the water taken from the Catskill Aqueduct and which is included in the water supply program costs to be paid for by the company will, for the first time, permit boating and fishing in the remaining Village reservoirs, thereby increasing the available recreational opportunities.

Recreation Plans

Article 38 of the presiding examiner's license order requires applicant to file with the Commission, within one year from the date of issuance of the license, a "statement of the steps which have been taken and which are planned" with respect to means for "the preservation of the natural beauty and improvement of the recreational opportunities of the project area." Article 38 as thus drafted is not in accord with our Order No. 260-A[18] and a statement of steps taken and planned would not be sufficient to carry out our expressed intention. In Order No. 260-A we stated: "It is the Commission's intent, whenever practical and in the public interest, to condition the issuance of future licenses upon acceptance of the plan for recreational use specified therein by the Commission." Article 38 will therefore be revised to require the filing by Con Edison of its proposed recreational use plan for approval by the Commission.

In reviewing the proposed recreational use plan which, as required by our regulations, is to be developed by the applicant in consultation with appropriate State and local officials, the Commission will be interested in observing and weighing the extent of the recreational facilities intended by the applicant to be provided at its own expense as an integral part of the project costs. These plans should be drafted with a view to increasing the recreational potential not only in the powerhouse area but, of equal importance, in the area surrounding the upper reservoir and the lands to be acquired in its vicinity. The location of camping, picnicking and sanitary facilities, as well as any access roads and trails to be provided, should be set out.

The record does not indicate whether the power plant will be open to the public. The project will be of great technical and scientific interest and we shall expect Con Edison to make such provision as practical for public visitation of this facility, perhaps by the scheduling of regularly conducted tours.

Effect on Navigation

The Commission has been informed by the office of the Chief of Engineers, Department of the Army, that the Cornwall project as planned by the applicant is satisfactory as far as the interests of navigation are concerned. It recommends that certain standard provisions in the interest of navigation be included in the license. The suggested provisions are incorporated in the license herein granted.

VI

CONCLUSION AND FINDINGS

In arriving at its judgments herein the Commission has given full weight to the public interest consistent with our obligations under Sections 4(e) and 10(a) of the Federal Power Act and with an awareness that the needs of our expanding population for adequate and reliable electric service must be reconciled with the need to conserve our dwindling areas of unspoiled natural beauty for this and future generations to enjoy.

We have considered with sympathy the protests, which in substance say there must be another source of power as good or better. The record shows, however, that the Cornwall project has large advantages over any other method of meeting the applicant's need for additional peaking power. We do not say that all pumped storage power projects should or will be approved. On the contrary, as we have indicated, where the public interest requires it, the license application will be denied. Here the impact of the project on the surrounding area is minimal while the need for electricity from this economical and dependable source is great.

---

[18] *License Applications—Revision of Regulation*, Docket No. R-233, Order No. 260-A, amending section 4.41 of Regulations Under the Federal Power Act, issued April 18, 1963, 29 FPC 777, 28 F.R. 4092; Order No. 292, clarifying section 4.41, Exhibit K, Recreation Development Plans, issued January 8, 1965, 33 FPC 32.

We therefore conclude that on balance the issuance of a license appropriately conditioned to avoid unnecessary harm to the landscape or to other public or private interests, for the construction, operation and maintenance by Con Edison of the Cornwall project, is desirable and justified in the overall public interest and that such license should be granted.

On the basis of this record we are unable to determine the exact route the transmission line beyond Nelsonville should follow and accordingly this phase of the project is remanded for further evidence. In addition, further testimony regarding the design of fish protective facilities may be considered at that time.

The Commission further finds:

(1) Consolidated Edison Company of New York, Inc., applicant in this proceeding, is a corporation organized and existing under and by virtue of the laws of the State of New York, and said applicant has submitted satisfactory evidence of compliance with all applicable laws of that State to the extent necessary to effectuate the purposes of the application herein and of the license to be issued in this proceeding.

(2) The application filed on January 29, 1963, and thereafter amended on September 13, 1963, is made for a license under the Federal Power Act which would authorize the construction, operation and maintenance of a hydroelectric development to be known as the Cornwall Pumped Storage Project, Project No. 2338, which would be located on the Hudson River approximately 40 miles north of the City of New York, in part in the towns of Cornwall and Highlands, respectively, in Orange County, New York (known as the Cornwall site) and appurtenant project works including the necessary transmission facilities.

(3) The proposed Cornwall hydroelectric generating plant would be located in and along the Hudson River, a navigable water of the United States.

(4) Appropriate public notice was given of the instant application. There is no competing application on file with the Commission for a license for a hydroelectric development in the Cornwall reach of the Hudson River.

(5) The issuance of a license for the Cornwall project as hereafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charges is 2,400,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project for the cost of administration of Part I of the Federal Power Act is reasonable as hereinafter fixed and specified.

(7) The present and the future electric energy requirements of applicant's present and potential consumers require the construction and operation of the proposed project.

(8) The project proposed and as authorized in the order issued concurrently herewith is feasible from an engineering and economic standpoint and the construction and operation thereof in the manner and for the purposes proposed by applicant as authorized herein are in the public interest.

(9) The project as proposed, with an initial capability of 2,000,000 kilowatts, but with provision for future expansion to at least 3,000,000 kilowatts, will be best adapted to a comprehensive plan for improving and developing the Cornwall reach of the Hudson River for all purposes.

(10) The project works as proposed and as authorized in the order hereto attached will be safe and stable.

(11) The project upper reservoir would be located some two miles from, and west of, the Hudson River and the project powerhouse would be located along and immediately adjacent to the Hudson River in the Village of Cornwall, which is immediately north of the Hudson Highlands.

(12) The construction of the project upper reservoir would not adversely affect, to any significant extent, the natural beauty, the historical significance, or the recreational opportunities of the area in which it would be situated, but the recreational advantages of such area would be enhanced thereby.

(13) The dike facing Clove Creek and forming part of the project upper reservoir should be at least three feet lower than the other dikes.

(14) There is no danger of seepage of any significant quantities of water out of the project reservoir, but applicant should install observation wells in the immediate vicinity of the project reservoir dikes to measure any seepage that does occur, sample the water in wells, ponds, and streams in the area before and after construction, and take appropriate measures to correct any conditions of significant seepage and, if necessary, respond in damages to parties who may be damaged thereby.

(15) The Hudson Highlands is an area of unusual natural beauty, great historical and artistic significance and of exceptional recreational opportunities. There are important historical remains and reconstructions at points along the Hudson River from Newburgh to West Point, but no such remains or reconstructions are in the immediate vicinity of the project works.

(16) The construction of the project power plant would not adversely affect, to any significant extent, the natural beauty, the historical significance, or the recreational opportunities of the area in which such plant would be situated.

(17) The view of the project power plant from the north would not be significant as the river in this area is wide and the structures would be low and designed to blend with the natural rock of the mountainside.

(18) Project power would be generated at 17,000 volts and transformed to 345,000 volts for transmission at the switchyard appurtenant to the powerhouse.

(19) The power would be transmitted across the Hudson River by four submarine cables (comprising two 345 kv circuits) approximately 4,200 feet in length; two additional submarine conduits will be constructed to meet future needs.

(20) Underground cables of essentially the same design as used for the river crossing would extend on the eastern shore of the river from the end of the submarine cables a distance of 1.6 miles to the Cornwall East Switching Station at Nelsonville.

(21) The Cornwall East Switching Station at Nelsonville would consist of station terminals, pressure control equipment, breakers and associated switches, lightning arresters, metering devices and terminal structures for the 345 kilovolt overhead circuits.

(22) To transmit the power which would be generated at the Cornwall project, applicant should construct and operate as parts of the project within the meaning of Section 3(11) of the Federal Power Act, a 345 kilovolt double circuit overhead transmission line on a right-of-way, the location and width to be subsequently determined, which would extend from the Cornwall East Switching Station at Nelsonville to a point of interconnection with applicant's transmission line grid.

(23) It is necessary and appropriate in the administration of the Federal Power Act that a decision in regard to the remainder of the project transmission facilities to be included in the license be deferred; the proceeding should be reopened and the case remanded for the taking of additional evidence as limited by our conclusions herein.

(24) The project will not adversely affect the fish resources of the Hudson River provided adequate protective facilities are installed. It appears that the facilities now planned for inclusion are adequate. However, opportunity should be made available at the reopened proceeding for interested persons and agencies to introduce such additional evidence as they may desire on the design of the fish protective facilities.

(25) The steps taken and proposed by applicant to preserve aesthetic, historical and recreational values, including but not limited to the expenditure of substantial sums for submarine and underground cable, satisfy the public interest standard embodied in Section 10(a) of the Federal Power Act.

(26) Applicant has assumed the responsibility for the expenditure of substantial sums in aid of the expansion of recreational resources and the preservation of scenic values.

(27) The water resources of the Village of Cornwall would be augmented and improved as a result of the project.

(28) As a result of the project, lands of the Palisades Interstate Park Commission in the watershed behind Storm King Mountain will be augmented by at least 150 acres.

(29) Subject to the terms and conditions hereinafter imposed, the proposed project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water power development and for other beneficial public uses, including recreational purposes.

(30) The Cornwall project is desirable and justified in the public interest for the purpose of developing the Hudson River for the use or benefit of interstate or foreign commerce. If the licensee cannot acquire by contract or pledge the properties required for the Cornwall project or the right to use or damage the lands or properties of others necessary to the construction, maintenance or operation of the Cornwall project, including the project transmission line, it may acquire the same by the exercise of the right of eminent domain in the District Court of the United States for the Southern District of New York or in the courts of the State of New York.

(31) The exceptions to the examiner's decision, except as herein granted, should be denied; the examiner's decision, to the extent not inconsistent herewith, should be adopted as part of this Opinion and Order.

The Commission orders:

(A) A license hereby is issued to Consolidated Edison Company of New York, Inc., hereinafter referred to as Licensee, under Section 4(e) of the Federal Power Act for a period of 50 years, effective as of the first day of the month in which acknowledgment of acceptance thereof is filed with the Commission by Licensee, for the construction, operation and maintenance of Project No. 2338, to be known as the Cornwall Pumped Storage Project, located primarily in the Village of Cornwall and Towns of Cornwall and Highlands, New York, and in and on the Hudson River, a navigable water of the United States and affecting the interest of interstate and foreign commerce, subject to the terms and conditions of the Act which is incorporated herein by reference as part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2338 shall consist of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or in-

terests therein are owned or held by the Licensee or by the United States; the general location of such project area being shown and described by certain exhibits which formed part of the application for license, or amendment thereof, and which are designated and described as follows:

Hearing Exhibit No.	
15	Sections & Details (exclusive of Typical Dike Detail).
18	General Map.
19	Site Plan.
20	Plan-Penstocks and Station.
21	Cross Section of Penstock and Station
22A	Cornwall East Switching Station, Modified Plan.
23A	Cornwall East Switching Station, Modified Elevation.
36	Proposed Dike Design (Dike 3 Facing Clove Creek).
38	Proposed Dike Crest, Dikes 1, 2, 4 and 5.
39	Proposed Dike Crest & Toe Detail—Dike 3.
License Exhibit No.	
M	General Description of Equipment in three sheets.

(ii) The Cornwall project, with provisions for future enlargement, will be a high-head pumped storage development located on the Hudson River approximately 40 miles north of New York City, in part of the Village of Cornwall and in part in the Towns of Cornwall and Highlands, and in Orange, Putnam and Westchester Counties, New York. A portion of the power tunnels and the penstock manifold, will occupy subsurface lands within the Palisades Interstate Park but the powerhouse will be so located that the surface facilities will be outside the Park.

The project will consist of an upper reservoir, a tunnel leading from the upper reservoir to a pumping-generating station on the river bank, primary transmission lines and other auxiliary facilities. The station will house reversible pump-turbine units. The units will alternately pump water from the river to the upper reservoir utilizing off-peak energy from other system sources, and generate power during peak hours by the flow of water from the reservoir back through the units to the river. The pumping generating cycle will be repeated daily, occurring with general regularity on week days and with modified regularity on weekends when system loads are lighter. When not pumping or generating on the peak, the units may be kept on the line at light loading to provide an immediately available large source of reserve capacity to assure the stability of the licensee's system and interconnected utility systems.

The *Upper Reservoir* will be created in the Hudson Highlands by forming a basin through the construction of five dikes, and will have available storage capacity of about 25,000 acre-feet between elevations 1,160 and 1,000 feet. The dikes will be constructed initially so that they may be raised in the future to provide for a maximum water surface elevation of 1,210 feet.

The *Lower Reservoir* will be the natural Hudson River which, at Cornwall, is essentially an estuary of the Atlantic Ocean with semidiurnal tides and widths in excess of a mile. This reservoir has unlimited storage capacity with water surface at about zero feet elevation.

The *Water Passage*, initially, will consist of a concrete lined tunnel, through granite, 40 feet inside diameter and about 10,000 feet long, a concrete lined subsurface manifold, and eight steel lined penstocks reinforced to accommodate a maximum surface elevation in the upper reservoir of 1,210 feet. Water from the upper reservoir will be conveyed through the tunnel, thence through the manifold, and through the penstocks to the pumping-generating station.

(C) This license is also subject to the terms and conditions set forth in Form L-4 (Revised June 1, 1964) entitled "Terms and Conditions of License for Unconstructed Project Affecting Navigable Waters of the United States" (32 FPC 839), which terms and conditions, designated as Articles 1 through 29, are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall install a water measuring weir below the dike which extends between Mt. Misery and White Horse Mountain and shall measure at least once each week during the first year of operations the seepage flow and turbidity, if any. The measurements shall be recorded, plotted, and reported to the Commission each three months for the first year of operations and thereafter when requested by the Commission or its authorized representative.

Article 31. The Licensee shall employ three qualified independent consultants for the purpose of making recommendations as to the measures to be taken with respect to the foundations of the upper reservoir dikes, the general reservoir area and the final design and specifications for the dikes and to advise Licensee as to other protective measures. A report and recommendations of the consultants shall be submitted for Commission consideration when the Licensee files revised Exhibits J and L for Commission approval. The Commission reserves the right to require the Licensee to take appropriate measures to assure the water tightness of the upper reservoir and other protective measures deemed necessary for the Project.

Article 32. The designs of the tunnel intake, and of the crest and toe of the dike facing Clove Creek, shall be based on hydraulic model studies and the crest of this dike shall be at least three feet lower in elevation than the other dikes.

Article 33. The Licensee shall submit in accordance with the Commission's rules and regulations revised Exhibits J and L and M showing the final designs of the project works and the Licensee shall not begin construction of the project structures until the Commission has approved such exhibits.

Article 34. The Licensee shall submit for Commission approval Exhibits F and K prepared in accordance with the Commission's Rules and Regulations, within two years from the effective date of this license.

Article 35. The Licensee shall design the overhead transmission facilities to accommodate the initial transmission of 2,000,000 kilowatts of power and the future transmission of at least 3,000,000 kilowatts of power. The Commission expressly reserves the right to determine at a later date the question of what transmission lines and appurtenant facilities beyond Nelsonville shall be covered in this license and included as part of the project works.

Article 36. The Licensee shall cooperate with the appropriate town and State park officials concerned and shall file with the Commission for its approval, and with the aforementioned officials, for their information, plans of the transmission facilities of the project as approved herein from the powerhouse to the East Cornwall Switching Station at Nelsonville and for the transmission lines beyond Nelsonville as shall later be approved, including provisions for the ultimate capacity of at least 3,000,000 kilowatts, and shall not begin construction of the initial transmission line facilities until the Commission has approved such plans. These plans shall describe the boundaries of the right-of-way by metes and bounds. Nothing in this article shall be construed to prohibit the Licensee from acquiring lands, rights-of-way and any other necessary permits and approval prior to the approval by the Commission of the final plans for the transmission facilities of the project, nor shall it be construed as approval by the Commission of any such acquisitions; provided, however, that no right of eminent domain shall be exercised by the Licensee in regard to the acquisition of lands necessary for the transmission line right-of-way unless and until the plans herein required shall have been filed with and approved by the Commission.

Article 37. The Licensee, after consultation with the United States Fish and Wildlife Service and the Fish and Game Division of the New York Conservation Department, (1) shall construct, operate and maintain or shall arrange for the construction, operation and maintenance of a fish screening facility at the relocated railroad trestle, (2) shall make or pay the cost of making post-construction evaluation studies to determine the extent of any effect of the project on the Hudson River fishery resources, and (3) shall make any needed modification of the screening facility, as may be ordered by the Commission on its own motion or upon recommendations by the United States Fish and Wildlife Service and the Division of Fish and Game of the New York State Conservation Department and subject to the further hearing as to the design of these facilities.

Article 38. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational plan including its plan for the preservation and improvement of the scenic beauty of the project area. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 39. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations in effect from time to time. As herein authorized, the installed capacity for such purposes is 2,400,000 horsepower.

(D) The exhibits designed and described in paragraph (B) above are hereby approved as part of the license herein issued to the extent therein indicated.

(E) No expansion of the Cornwall Pumped Storage Project beyond the presently licensed maximum peak generating capacity of 2,000,000 kilowatts shall be authorized without the issuance of a public notice of such proposed increase and the granting of an opportunity for hearing thereon.

(F) The proceeding shall be reopened and the case remanded to an Examiner of the Commission for the introduction of additional evidence in regard solely to the overhead transmission facilities beyond Nelsonville and the design of the fish protective facilities of the project. Thereafter the license as now issued will be amended in accordance with our determination made thereon.

(G) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Federal Power Act, particularly Sections 4(e), 10(a) and 308 thereof, and the Commission's Rules of Practice and Procedure, a further public hearing shall be held in this proceeding commencing on May 4, 1965, at 10 a.m. (EDST) in a Commission hearing room in Washington, D.C. under the direction of an Examiner to be appointed by the Chief Examiner of the Commission, for the receipt of additional evidence, both oral and written, addressed to the determination of the best route for the overhead transmission lines to be included in the license issued for the Cornwall Pumped Storage Project and to the design of the fish protective facilities of the project. Petitions to intervene in the reopened proceeding, limited to the two issues aforesaid, may be submitted by persons not presently parties to the proceeding until and including April 16, 1965; thereafter no further petitions to intervene shall be allowed. The examiner shall conduct such hearing with all reasonable dispatch and may, at his discretion, provide for the filing of briefs addressed to these issues. Following the compilation of an appropriate record the examiner shall certify the record so made directly to the Commission, without rendering an intermediate decision thereon. No additional evidence or argument beyond that herein provided will be permitted.

(H) The examiner's decision, to the extent not inconsistent herewith, is hereby adopted as part of this Opinion and Order.

(I) Except as herein granted, the exceptions to the examiner's decision are hereby denied.

(J) This order shall become final thirty (30) days from the date of its issuance unless application for rehearing shall be filed as provided by Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgement of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within sixty (60) days from the date of issuance of this order.

Commissioner Ross, *concurring in part* and *dissenting in part.*

Ross, *Commissioner, concurring in part and dissenting in part:*

Any project licensed by this Commission must stand the test set forth under Section 10(a) of the Federal Power Act, namely, that it is, in the judgment of the Commission, best adapted to a comprehensive plan for improving the waterway: (1) for the use or benefit of interstate or foreign commerce, (2) for the improvement and utilization of water power development, and (3) for other beneficial public uses, including recreational purposes. It should be clear from the outset that Congress had in mind that a waterway should be considered as a unit and that no single purpose is primarily controlling. In its determination, the Commission is required to balance and judge the various interests in the overall public good.

Bearing in mind the importance of this case to New York and its environs as well as to the Nation, we must inquire what the essential elements are that should be considered in determining whether this project with its transmission lines is best adapted to the development of the Hudson Valley. First of all, the company must show that there is need for the power of the kind proposed. Secondly, the utility has the burden of showing that there is not a more reasonable alternative source. The project must be both economic and financially feasible. The Company must also show that it has complied generally with the State laws, see Section 9(b). Furthermore, the project must be safe so as not to endanger life, health and property.

Even if a company proves that the project is safe, economic and needed, the Commission, despite its critics to the contrary, must then appraise the project in relationship to the overall interest of the waterway. This means a weighing of aesthetics and a weighing of recreational interests, including fish and wildlife.[1] It also means considering the real inconvenience suffered by citizens affected by the project and its transmission lines. It means weighing the impact of the project upon local, county and state development and zoning plans. All these matters and more are included in the term "other beneficial uses." Should a power project despoil the area where it would be located and through which its lines traverse, the interests of the area and the nation are not advanced.

---

[1] See, for example: *Namekagon Hydro Co.* v. *F.P.C.*, 216 F. 2d 509; *Pacific Northwest Power Co.*, Opinion No. 418, 31 FPC 247; *PUD No. 1 of Skamania County*, Project No. 2199, Opinion No. 440, issued July 30, 1964, 32 FPC 444.

The Cornwall pumped storage project illustrates very vividly the problems that confront both the utilities of this nation and the public which it seeks to serve. At the one extreme, the public utilities of this country and sometimes this Commission have been influenced by one dominant desire, the most comprehensive *power* development possible. This paramount consideration has only been modified by the demand of particular pressure groups. The utilities faced with growing competition by other energy sources, such as natural gas have sought to minimize to the extent humanly possible any lessening of the most economic, materialistically speaking, development. To the utilities (as in this case, see testimony of Harland Forbes, tr. p. 509, and Waring, tr. p. 529) the threat faced by underground transmission in any one project involves the threat of all transmission lines being forced underground. Colored by this negative thinking, utilities all across the country are fighting what is to them a deadly serious war. Aware of the growing concern of the public, the utilities now, as in the past, seek to withhold their future transmission plans from the public and their experts, the local and regional planning authorities. This was done here. When questioned, the utilities cite the fact that speculators will move in and that local bodies of course cannot understand the complexities of developing vast interstate regional networks. (*The State ex rel. Kearns* v. *Ohio Power Co.*, 127 N.E. 2d 394.)

Parenthetically speaking, this state of affairs undoubtedly will bring about legislation requiring FPC certification of important extra high voltage lines—and in the not too distant future. This is so not only for the reasons mentioned above but also to insure that the number of such facilities are not unnecessarily duplicated and that the most extensive use of the facilities built and to be built is encouraged.

Contrasted with this approach is the extreme approach of those who seek to maintain the highest aesthetic standard without due regard to other pressing needs of the nation. To them any change in our natural environment is a monument to our materialistic selfishness. This group uniformly opposes the construction of required new generating facilities, irrespective of type, location or of the efforts of the utility to modify objectionable features. A few individuals who have the means and resources to enjoy nature in its most primeval state seek to impose their desires upon the many who might prefer a more abundant life, heretofore a dream but not a reality.

This case represents actually elements of both extremes though modified by serious attempts by both sides to reach a satisfactory compromise. To its credit, the Applicant has sought to minimize the aesthetic objections by trying to design the project so it can be accommodated with its surroundings. Landscaping, going under the river, and underground to a distant substation are substantial improvements. On the other hand, many of those who wish to preserve the area recognize that the project will not now materially affect this historic vista along the river. Where do we go from here? The Company states any further expenditures will cause them to abandon the project. What does the record show? It is one of the most complete records ever developed before this Commission so far as aesthetics are concerned. In other respects it is most deficient.

Briefly, for reasons to follow, I believe that the case should be remanded for further hearing before an Examiner with his decision to be waived, to allow immediate consideration by the Commission. Such hearing would be for the purpose of developing whether there are alternative sources of purchased peaking power available, whether the operation of this project will in fact have a substantial impact on the Hudson River fishing resource (contrasted to the majority who only allow testimony as to the adequacy of the proposed protective fish facilities), and lastly, in determining the best possible right of way, the latest information on the costs of underground construction together with the feasibility of going underground along the present railroad right of way. In no event, in my opinion, should the Commission undertake to decide this case before the State of New York has had a reasonable opportunity to resolve it. In this connection, I feel the Commission should withhold a decision until the 1st of March 1966.

In deciding to advise a limited remand of this nature, I, of course, am aware that the Applicant alleges that this project is urgently needed *now* and undoubtedly, I presume it would urge that such a remand would in effect kill the project. Invariably, when approval is being sought of a regulatory agency, the Applicant seeks to influence the decision by claiming that without an immediate decision the world is coming to an end. The regulator must weigh the consequences of delay against the overriding necessity of insuring a full presentation of the facts. Frequently, the urge to make haste may in fact be an excuse to prevent a serious scrutiny or more likely to forestall additional objections. A regulated utility and its regulators live in a glass house and its primary consideration should always be to see that a public need can be demonstrated on the record. A less than full and adequate record can only lead to a serious undermining of the public's confidence in both. In my opinion, if a project is in fact good, no one or combination of objectors can destroy it. In this case, additional delay of up to a year will not vitally affect the consumers of New York. The record shows that only three units will be ready in 1967 and the remaining five in 1968. The record further shows that the plant won't be dependable until 1970–1971, that is to say, the full load cannot be absorbed until then. Moreover, this is based on the load of the Southeastern New York companies, not just Con. Ed. Had Con. Ed. proposed its project at a time when it was not interconnected, the situation would have been different. However, a relatively short time ago, Con. Ed. finally interconnected with its neighboring utilities and makes much of that fact in this record. In my judgment, such a remand would not be unduly prejudicial to Con. Ed.

Since I am urging a limited remand only, I think it is appropriate to comment on the status of the issues not remanded. First of all, I feel without doubt that the applicant has shown a need for a peaking service. They have also proved beyond question that this project standing by itself has many unique advantages. In fact, aesthetics aside, it is peculiarly adaptable to the Applicant's system. It has unusual intangible advantages, such as providing increased reliability of power supply at critical periods. In fact, it is hard for me to understand why the officers of this Company, considering their glowing testimony as to the merits of the project, would testify when asked about additional underground that they had "no intention of going further than that."

I also feel that the Company has satisfactorily compared the alternative of gas turbines to the latter's disadvantage.

Another alternative mentioned on the record is a modern large scale thermal station located in New York. After studying the proposed economic exhibits and testimony fully, I am convinced that the economic advantages of a pumped storage project with its other intangible factors at this time outweigh the thermal plant.

It also seems clear that there are no other alternative pumped storage projects in the State of New York which would be as economic.

In proposing the remand, I am suggesting that I am satisfied after reading the transcript that the project is well designed and safe. I am convinced from the evidence that there is no danger to the area from seepage. As much as any project can be said to be safe, this project passes the test. The water supply, I believe, is not endangered and, in my opinion, it would be useless to protract this phase of the case.

In discussing a remand I have deliberately excluded the necessity of reopening the record to allow more aesthetic evidence to be introduced. In my opinion, the record is complete. Much has been said about the "Hudson Highlands" and all of it was needed. I personally am impressed with the fact that barring the gantry crane, the pumped storage project after landscaping will be compatible with the area. I admit that the reservoir itself will not be a thing of beauty. The daily drawdowns will leave a large partly dry pit, with unsightly banks, surrounded by a fence, not a particularly serene sight to the hiker in the Black Forest. To say it will be covered by foliage is somewhat of an understatement. In truth, it will be conspicuous. However, weighing this against the benefits, I feel it should be something the hiker must bear. On the whole, I feel a 2000 MW project should be built, assuming the evidence as to the remanded issues doesn't develop something differently. In fact, I would urge that, at least as to this one project, the Legislature of the State of New York, or Congress for that matter, make this project an exception, but no other if this area is to be set aside for park purposes.

Feeling this way, it might be surprising to some that I nevertheless desire a postponement of one year of any licensing. This would seem to be an abdication of our responsibility under the Federal Power Act. This is not really the case. Under Section 10(a) we must consider "other beneficial public uses, including recreation. Of necessity, such uses do not lend themselves to ready economic tests. They involve weighing intangibles, a hard job at its best. Expertise in such matters involves a true consideration of the direction that this Nation of ours is going to undertake. It goes beyond an intimate knowledge of economics and takes into consideration what we desire in maintaining a quality of life for ourselves and for those that follow us. As an agency undertaking to carry out a function of Congress, that is, licensing hydro projects, we should be careful to consider the social factors that Congress would weigh.

In this case, it appears obvious that had this area of the "Hudson Highlands" been declared a State or National park, that is, had the people in the area already spoken, we probably would have listened and might well have refused to license it. The delicate way we are treating Fahnestock State Park is an example. There should be absolutely no reluctance on our part to pause a minute and let the public speak. Whenever big government or big business, particularly those with the government's right to condemn granted it, seek to impose their will on the local community or region, one must proceed with due caution. The mere fact that a lethargic region has failed to recognize the inherent beauty and life giving qualities of an area until it is almost too late shouldn't mean we can't give them a last chance. It is impossible for me to honestly represent that I have the same scale of values of those of the people of New York. I believe I am duly responsive to the intangible factors of life and further believe that considering those factors a 2000 MW pumped storage plant will not destroy them. At the same time, I am willing to have my judgment put to the test and I don't feel this is the abdication to which I spoke.

In any event, let this case be a lesson to the Nation. The Potomacs and the Hudsons can't wait. They will be saved only by the ever increasing interests of those who, again I say, seek to maintain our quality of life. Postponements such as I suggest here cannot always be the order of the day. However, they are necessary, I believe, in the Commission's early groping to find standards by which it can equitably balance the traditional economic advantages of a proposed power project with the intangible values, such as aesthetics, fish and wildlife, and recreation.

There is another aspect of the project with which I disagree with my colleagues. They have seen fit to authorize a 2000 MW plant with provision for ultimate 3000 MW after due notice and hearing. It is to be noted, however, that the Applicant from the beginning to the end has consistently opposed enlarging the project. Exhibit 43. The majority say in response that "don't worry, we really are only authorizing a 2000 MW plant." Then why finding 9: "The project as proposed, with an initial capability of 2,000,000 kilowatts, but with provision for future expansion to at least 3,000,000 kilowatts, will be best adapted to a comprehensive plan for improving and developing the Cornwall reach of the Hudson River for all purposes." Obviously, it must be there for a purpose. In my opinion, it is done for two reasons. First, it was helpful in justifying the expenditure of at least an additional $1,800,000 for strengthening the dikes and penstocks. Secondly, and most important, such a finding is necessary in order to justify the originally proposed 250′ right of way from Cornwall substation to an existing right of way. So long as the possibility of a 3000 MW plant exists, the utility is bound to seek and the Commission is more than likely to grant the larger right of way, thereby making the transmission right of way more objectionable than ever. In my opinion, the project in no event should be enlarged beyond 2000 MW. First of all, all the real balancing of interests has been done on the basis of 2000 MW. The Applicant is unalterably opposed to the increase in the size and has introduced evidence in support of its position which is most persuasive. Con. Ed. pointed out (Ex. 43) that the improvement in the technology of electric power supply has been dramatically rapid over the past few years, and it therefore could not speculate that additional pumped storage capacity would be the most economic source of peaking power at a time when the additional 1000 MW might be usable. Con. Ed. further pointed out that the effect of a 3000 MW plant from a scenic standpoint cannot be weighed at this time.

In addition, a 3000 MW project would require, without doubt, an almost continuous construction program on Storm King for the next ten years or more. It would substantially increase the height of the dikes and increase the size of the power house, which is said now to be "relatively inconspicuous." It would have an unforeseen impact on fish and generally be inimical to the aesthetics of the area.

Staff is to be congratulated for bringing to our attention the most comprehensive power development. It is our duty to weigh the advantages of increasing the size against the other considerations. I feel that these other considerations dictate a 2000 MW plant. If this is the right answer, let us say so and plan accordingly. The public is entitled to know and should not be kept dangling. If it is only 2000 MW, then money can be saved and additional transmission rights of way forgotten. Proper planning can ensue.

This leaves one remaining alternative, however, which despite argument to the contrary was not developed. At the oral argument, the attorney for the Applicant was asked, "Talking about interties, * * *, have you explored the possibility of purchasing peak power from other systems through interconnections?" The answer was, "Yes, sir, the testimony in the record is that nothing can be done which will take the place of this project." I think two things are significant. First, the answer is not truly responsive and secondly, a search of the record discloses that in reply to a similar question, Mr. Waring also failed to truly respond, see Tr. p. 39. He described the status of the company's interconnections but failed to indicate that they had explored the possibility of seeking purchased peaking power, although he alluded to negotiations for Canadian power, Tr. p. 40.

In my opinion, the only true alternative that would likely be as economic as the proposed project would be purchased peaking power. There are two possibly differing sources: one would be purchasing pumped storage or normal hydro peaking which may be in the process of development in New England; or secondly, purchasing steam peaking power from new large scale thermal stations in Pennsylvania or in Appalachia. I am aware, of course, that other things being equal, it is better to have its source close to New York. However, I do feel the public is entitled to know on the record that no stone has been left unturned. How much better it would be if the public is clearly advised under oath and cross examination that there truly is no alternative? The thread running through this case has been that the applicant is entitled to a license upon making a prima facie case. My own personal regulatory philosophy compels me to reject this approach. This Commission of its own motion, should always seek to insure that a full and adequate record is presented to it. A regulatory commission can insure continuing confidence in its decisions only when it has used its staff and its own expertise in a manner not possible for the uninformed and poorly financed public. With our intimate knowledge of other systems and to a lesser extent of their plans, it should be possible to resolve all doubts as to alternative sources. This may have been done but the record doesn't speak. Let it do so.

As to the transmission right of way for this project, I heartedly applaud the majority's decision to remand that portion of the case. In light of the remand, and particularly in light of the record and the comments of my colleagues, I find it necessary to comment on this point.

As I have mentioned, the tactics of the Applicant were obviously dictated by the precedential effect of underground transmission. As Chairman Forbes stated, he would rather abandon the project rather than go underground on such an unwarranted scale. He further stated, "(there is) no more reason to put these lines underground, apart from the Hudson River area, than there would be to put underground hundreds of miles of other overhead transmission and distribution lines that are owned by the Company." In my opinion, this begs the question. I feel and apparently the majority feels that the "Hudson Highlands" is an area of unique beauty. This means more than the river itself. It encompasses the adjoining historic and scenic area so vividly described in the record. If economic, I feel serious consideration should be given to extending the underground portion to possibly either Carmel or to the PJM Line. This would not mean that every Con. Ed. line must go underground. Rather it is a recognition of the distinctive aesthetic feature of the Hudson Highland region as a whole.

By economic, I do not suggest that the costs should be comparable to the costs of overhead transmission lines. Rather the additional costs must be balanced against the damage, actual and intangible to the area involved. By additional costs, I mean the reasonably predictable costs expected of the industry at the time of construction, not costs measured by work done in a dissimilar area. As the Examiner pointed out, Staff had serious reservations as to the reliability of the Company estimates. I do too. Too often, when a utility doesn't wish to do something, it becomes prohibitively expensive. Underground EHV transmission, a phase of the electrical industry too long forgotten, is on its way to becoming practicable. The public is demanding it and the public who actually pay the bills are willing to accept the costs of it when there are offsetting advantages.

Whether the utilities like it or not, they will increasingly be subjected to decisions such as *Town of Hamilton* v. *Department of Public Utilities*, 190 N.E. 2d 545. In that case the court stated:

> The record as we have noted, contains evidence of higher costs of underground construction. It is not our function, however, to determine what these costs might be or what the department means by "greatly increased costs" or to speculate what the department would find them to be or their effect on consumer rates, or what in its view is the adverse effect on property values which the decision appears to recognize. A high cost of placing the entire segment underground would not dispose of the contention as to the center of the town. Findings are required in respect of such matters.
>
> The findings should be specific as to the cost of underground installation through the civic center of Hamilton, the effect of overhead wires on that part of the town for its present and its planned uses, the safety of overhead wires in congested areas, and the probable effect of overhead construction on property values, and also on general welfare factors, having in mind that such considerations may be of high importance in long range planning and that an adverse effect thereon may not be reflected immediately in lower property valuations. We recognize that the weight of relevant factors is different when determining the effect of the line in open areas. The department should, nevertheless, also make specific findings as to the cost of underground construction in the more rural areas through which the two segments of the line below Ipswich Junction will pass, and the effect in such areas of overhead wires. The determination of the balance of public interest and convenience may properly be made only after the opposing factors have thus been expressly found.

The electrical industry presently has a study underway at Cornell. A record in which the results of the studies completed thus far are clearly disclosed would be most helpful. Since there seems to be an air of mystery as to this subject, I would recommend that the best experts available in the manufacturing industry be sought to testify. Our National Power Survey, a monument in most respects is not too helpful. Such costs as are set forth are essentially averages of undetermined projects, undetermined because the industry was fearful to have them quoted back directly. The problem of underground EHV transmission is not dissimilar with the problem of D/C transmission that is facing the electrical industry. In that case, it was said that it was a long way off. What has to be done to get the industry moving?

In this particular case, a reasonable alternative to overhead transmission may well be to construct a further portion underground. I am convinced in my own mind that the only figures $85,000,000 or $99,000,000 are excessive. If that were the true figure, I would give up the ghost. However, let the record show what the outside experts would estimate that the job would cost. Let us explore costs of underground along the railroad right of way. Also, let us remember that the annual costs of underground, not the total costs of underground, should be compared with the annual benefits of the pumped storage project. Further, let us not overbuild the transmission system. Let us build it to fit this project, not a 3000 MW or 4000 MW plant, or for a future project on Breakneck Mountain.

Lastly, but far from being the least important, in remanding the case for further hearing, I would require that the hearing specifically resolve the question arising from the Applicant's fish expert when he testified, "that the last study made on the Hudson River was 1938 and it hasn't been done since."

Tr. P. 159. In view of the fact that the Applicant's whole case, insofar as the impact of this project upon the fishery resource of the Hudson River, stems from this one witness, I believe it is crucial to reopen the record to determine whether subsequent studies have been made and their conclusions as they might affect this issue. It is generally well known that such a study has been made. In fact, the Staff of the Commission has analyzed it but such analysis has not been subjected to cross examination. It may well be that the ultimate answer will not be changed. If so, at least the air will be cleared and those who are so tremendously concerned about the fishery resource will have a fair opportunity to question the validity of the conclusions upon which Finding 24 is based. The suggestion of the majority to reopen the case to determine the adequacy of the fish protective facilities presupposes that no substantial damage will result to the fishery resource because of the operation of the plant. If by operation of the plant, there are no fish to protect with its facilities, it would be an empty victory. The continued existence of this resource is one of the primary issues in this case and I, for one, am not willing to base an ultimate conclusion upon testimony about which serious doubts have arisen. I would be hopeful that all parties might be able to resolve, upon remand, the extent to which this area is a spawning ground for anadromous fish, the time of the spawning runs, and particularly the effect of the discharges upon possible temperature variations for both a 2000 MW plant and 3000 MW plant.

INITIAL DECISION
OF THE PRESIDING EXAMINER UPON APPLICATION FOR A LICENSE FOR A HYDROELECTRIC PROJECT

(Issued July 31, 1964)

MARSH, *Presiding Examiner:*

History of the Proceeding

This proceeding is upon the application under Section 4(e) of the Federal Power Act filed by Consolidated Edison Company of New York, Inc. (Applicant or Con Edison), on January 29, 1963, for a license to authorize the construction, operation and maintenance of certain proposed project works for the development, transmission and utilization of power known as the Cornwall Pumped-Storage Project, Project No. 2338, which would be located on the Hudson River in the Village of Cornwall and Towns of Cornwall and Highlands, Orange County, New York.

Notice that such an application had been filed with the Federal Power Commission was issued by its Secretary on March 12, 1963. That notice, which provided that protests and petitions to intervene might be filed on or before April 29, 1963, was published in the Federal Register on March 20, 1963, and also appeared (once each week for four weeks) in a newspaper of general circulation (the *Independent Republican of Goshen*, Village of Goshen) published in Orange County, New York.

On September 13, 1963, Applicant submitted an amendment to the application filed on January 29, 1963, to reflect minor changes in the plans therein proposed for the project.

On January 22, 1964, the Commission issued an order providing for a public hearing in this proceeding and prescribing the procedure to be adhered to in that hearing. After reciting that the Commission had received communications from many individuals and organizations expressing their interest in this matter and raising questions concerning, among other things, the effect of the project upon the natural beauty of the area, the water supply of local communities, and the fish and wildlife resources of the area, the order provided that at the hearing, Applicant would go forward with a general statement by a competent witness as to its plans with respect to the proposed project, the safety provisions thereof, and specific comments upon the various subjects of public interest evidenced by the communications referred to above. The order required, too, that Applicant make available competent witnesses to answer, with respect to its plans, questions which might be asked by the Staff of the Commission, or any intervening party, and any questions which the Presiding Examiner might direct to the witnesses on behalf of other interested individuals, groups or agencies, the answers to which, in his opinion, might be of assistance to the Commission in its further consideration of the application.

The notice further provided that: "At the close of this phase of the proceedings, the Presiding Examiner shall adjourn the proceedings until further order of the Commission."

Pursuant to that order, which was published in the Federal Register and issued to the parties and interested persons of record, and to states and other governmental authorities deemed to have an official interest in the proceeding, a hearing was held beginning on February 25 and concluding February 26, 1964. There were in attendance representatives of the Applicant, the Village of Cornwall, New York, Scenic Hudson Preservation Conference,[1] the New York State Water Resources Commission, Philipstown Citizens Association, and Town of Cortlandt, New York, Constitution Island Association of West Point, Ralph E. Ogden (an individual property owner), Garrison Fish and Game Club, Putnam County Historical Society and a group of citizens gathered together under the name of "Save America's Natural Beauty." In the course of these sessions, everyone wishing to be heard was permitted to testify or make a statement of position, or both, and to ask of the other participants such questions as he saw fit. In accordance with the notice, also, at the conclusion of that phase of the proceeding, the Presiding Examiner filed with the Commission a report on the hearing so held.

Thereafter, on March 13, 1964, Applicant filed a motion to terminate the hearings in this proceeding. Answers in opposition to that motion were filed by Scenic Hudson Preservation Conference (Scenic Hudson) and Philipstown Citizens Association (Philipstown). On March 27, 1964, the Commission issued an order denying Applicant's motion to terminate the hearings and, among other things, set the matter down for further hearing, directing that the Presiding Examiner convene a prehearing conference prior to the date fixed for the hearing proper to determine the procedures to be followed at such hearing. Pursuant to that order, a prehearing conference was held on April 7, 1964, at which everyone present was permitted to state his position and otherwise to participate fully. Pursuant to the ruling of the Presiding Examiner made at that conference, the hearing reconvened on May 4, 1964, and after seven days of hearing was concluded on May 12, 1964.

Although the notice of March 12, 1963, fixed April 29, 1963, as the final date for the filing of petitions to intervene and in protest, no such petitions or protests had been filed prior to the issuance by the Commission of the order of

---

[1] Not to be confused with the Hudson River Conservation Society. Scenic Hudson is an association of a number of groups and organizations "interested in the protection of certain sections of the Hudson River Valley which it believes are unique from a scenic, historical and recreational standpoint * * *." The conference began its activities as such in late January 1964, soon after the Commission's notice of January 24, 1964, was issued.

January 22, 1964. Subsequent to the latter date, petitions to intervene were filed by the Scenic Hudson Preservation Conference, the Village of Cornwall, New York (Cornwall), the Town of Cortlandt, New York (Cortlandt), the Philipstown Citizens Association, the Town of Yorktown, New York, and the Builders Institute of Westchester and Putnam Counties, Inc. Although they were filed tardily, all of these petitions were granted by the Commission. At the session of the hearing held on May 4, 1964, counsel for the Town of Putnam Valley appeared, announced that he proposed to file a petition to intervene, and was permitted to participate. On May 8, 1964, such a petition was filed and on June 4, 1964, it was granted. It is stated in the Staff's initial brief that the Town of Yorktown and the Builders Institute have advised the Commission of their desire to withdraw their petitions for leave to intervene.

Prior to and during the course of the hearings herein, a large number of individuals and groups of individuals who did not appear personally, and were not otherwise represented at such hearings, filed with the Commission statements of their opinions and views with respect to the granting of the license sought herein. Many of such communications favored the granting of the license sought while many opposed the issuance. No effort has been made to tabulate these communications for or against the application so that it is not known where the preponderance may rest. However, cognizance is taken and consideration will have been given herein to all of the issues raised in those communications and to the contentions and arguments of the communicants with respect thereto.

At the hearings, all of those who had sought the privilege of doing so were permitted to participate. Since the conclusion of the hearing, main and reply briefs have been filed by the Applicant, the Village of Cornwall, the Scenic Hudson Preservation Conference, and the Staff of the Federal Power Commission. Although it did not file an initial brief, Philipstown filed a reply brief. The matter is now ready for decision.

Questions for Decision

Section 10(a) of the Federal Power Act provides in pertinent part that:

> All licenses issued under this Part shall be on the following conditions:
>
> (a) That the project adopted, * * * shall be such as in the judgment of the Commission will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water power development, and for other beneficial public uses, including recreational purposes; * * *.

In the matter of *Southern California Edison Company*, 8 FPC 364, 385, the Commission said:

> In addition to the authority contained in section 4(e), the provisions of section 10(a) of the act require us to find before issuing a license that the Company's water power project is best adapted to a comprehensive plan for the improvement and utilization of water power development, and most important of all, we are required to find that the project is best adapted for all other beneficial public uses including recreational purposes.
>
> It is our duty to give consideration to the benefits to be obtained by the public in utilizing the waters available for all purposes and to consider the burdens placed on each class of the public by conflicting uses. Under section 10(a) we must consider the recreational interests and the conditions

requested by the Secretary of Agriculture. Our responsibility under section 10(a) of the act is to protect the public interest.

In this proceeding, the Federal Power Commission is called upon to pass on an application for a license for a pumped-storage hydroelectric project. That the Commission has the power and authority to make the necessary determination and to issue such a license appears to be conceded by the Applicant and concurred in by other participants in the proceeding. Actually, a number of issues frequently arising in hydroelectric license project proceedings were not raised here. For example, the engineering feasibility of the proposed project, its economic feasibility, Applicant's ability to finance the proposed construction, the adequacy of the project to perform the function for which it is intended and the need by Con Edison for ever-expanding sources of supply of energy are not questioned or contested by the other participants. With respect to these subjects, Applicant has made an adequate showing, and no evidence to the contrary has been offered by anyone.

The safety of the project structures and the provisions therefor are normally matters for consideration. The impact of the project proposed upon the recreational aspects of the area, including fish and wildlife resources, must always be weighed in reaching a conclusion as to whether the project is best adapted to a comprehensive plan for improving or developing waterway.

In *Namekagon Hydro Company*, 12 FPC 203, 206, the Commission said:

> Recreational values are given consideration in every license application before the Commission. However, the Commission realizes that in many cases where unique and most special types of recreation are encountered a dollar evaluation is inadequate as the public interest must be considered and it cannot be evaluated adequately only in dollars and cents. Unique and most special types of recreation have been preserved in the public interest at the cost of loss of power which is definitely ascertainable in monetary value * * *.
>
> Citing *Southern California Edison Company, supra.*

In this instance, the safety of the project structures and the provisions therefor and the impact of the proposed project upon the fish and wildlife resources of the area were specifically made subjects for consideration by the Commission's order of January 22, 1964. In addition, that order emphasizes issues not usually present in license project proceedings but which achieve unique importance herein, namely, "the effect of the project upon the natural beauty of the area [and] the water supply of local communities." As will more particularly hereinafter appear another unique issue in this proceeding is the impact of the construction and maintenance of the proposed project on the economy of the area, including tax revenues and employment. These seem clearly subjects for consideration in the effort to determine the effect of the proposed project upon the public interests.

Position of the Parties

It is the Staff's position, as evidenced by its brief and the findings proposed therein, that (1) the project works as proposed, with an initial capacity of 2 million kilowatts but with provisions for future expansion to at least 3 million kilowatts, would be best adapted to the comprehensive plan for improving or developing this reach of the Hudson River for all purposes, (2) the project works, including the reservoir, dikes,[2] tunnel and plant as proposed will be safe and stable and will not significantly affect, but in some aspects will enhance, local scenic and related values, (3) the project works proposed for construction on the west side of the river would be feasible from an engineering and economic standpoint, but that the Applicant should be required to follow the transmission line route which the Staff proposed as the alternative.

---

[2] Provided that all dike crests except the one facing Clove Creek are raised to at least elevation 1,173.0 feet. *Infra*, p. 476.

The Village of Cornwall urges the granting of the license sought herein for the reasons that (1) the project would be sound and safe from an engineering standpoint and feasible from all standpoints, (2) would greatly improve Cornwall's water supply, (3) would provide additional recreational benefits, (4) would improve the present scenic beauty of the area and, most importantly, (5) the project works would be of great economic benefit to the village and to the area.

While not denying Con Edison's need for additional sources of energy, or the economic and engineering feasibility of the proposed project, or that otherwise the project would be best adapted to a comprehensive plan for the development of this reach of the river, Scenic Hudson contends that:

> (1) Con Edison's peaking requirements can and should be provided by other means.
>
> (2) Denial of the Cornwall license application is required because of the importance of the scenic and historical resources of the area.
>
> (3) The proposed project would have an adverse effect upon the recreational resources of the area, in that, among other things, leakage from the proposed reservoir would pollute the streams, lakes, ponds and wells in the drainage area of that reservoir.

Philipstown is not opposed to the pumped-storage project in Cornwall as proposed by the Applicant, nor is it against bringing the power produced there into New York City through Philipstown, but it contends that the transmission lines through the town should be underground. Each of the foregoing contentions will be given appropriate consideration in this decision.

The Applicant and the Proposed Project

The Applicant is a corporation organized and existing under the laws of the State of New York. The corporation is a public utility serving with electricity the Boroughs of Richmond, Brooklyn, Queens, Manhattan, the Bronx and the greater part of Westchester County, New York. It does not presently serve directly any part of Putnam County, the county in which Philipstown is located.

Growing Need for Electricity

Despite the fact that no one questions the fact that Con Edison's markets are expanding and that increased supplies of electricity are constantly needed, consideration of the public interests involved in this proceeding seems to require a brief appraisal of those factors.

Con Edison's kilowatt hour sales for 1963 increased 6.5% over 1962, the suburban Westchester area, where most customers live in individual houses, showing the largest increase. The Company's system peak loads are growing at the rate of approximately 300 megawatts per year. A new all-time electric system peak demand of 5,105,000 kilowatts occurred on July 29, 1963. This was 5.2% above the previous annual peak. On July 2, 1963, a new 24-hour send out record, 7.9% higher than the previous annual 24-hour send out, was established. Applicant's anticipated peak load in 1968 is estimated at 6,700 megawatts. The uncontroverted testimony is that Con Edison's present capacity, plus that presently under construction, will be inadequate to supply the peak loads Con Edison expects to experience by the summer of 1967.

That any substantial interruption in electric service to Con Edison's service area would practically paralyze this most densely populated community need hardly be said, and, it is obviously of the utmost importance that there be available for the use of electric consumers therein a sufficient, and an entirely dependable, supply of electricity. It is, then, the responsibility of Con Edison's management, and clearly a heavy one as well, to devote its attention to the changing and growing characteristics of its electric load, to the reliability and dependability of its service and to the various means by which the Company can meet the ever increasing load demands of its customers, and in the most economical manner.

There are no conventional hydroelectric powerplant sites available to Con Edison. To meet its growing demands for energy, the Applicant has installed, and is installing, large, highly efficient, thermal generating units. Currently, the Company is installing a one-million-kilowatt thermal unit, has constructed a nuclear generating plant, and is engaged in a major program of interconnection with other electric systems in upstate New York, in New England, New Jersey, and Pennsylvania.

The evidence establishes that there are only four practical ways by which Con Edison can meet, promptly and dependably, the expanding demands of its customers. Applicant must construct transmission lines to bring power into New York City from sources outside the area, build additional conventional thermal plants within the metropolitan area, build nuclear powerplants within the area, or construct pumped-storage hydroelectric projects where sites for that purpose are available.

The Proposed Project

The proposed Cornwall project would be a high head pumped-storage development, (the largest in the world), located on the Hudson River approximately 40 miles north of New York City, in part in the Village of Cornwall and in part in the Towns of Cornwall and Highlands, Orange County, New York. The project would consist of an upper and lower reservoir interconnected by a power tunnel, a generating plant and other auxiliary facilities, and transmission facilities which would convey the power generated at the project power plant to a point of interconnection with Applicant's integrated electric distribution system in, or in the environs of, the City of New York.

The project upper reservoir would be situated in a naturally formed basin near the crest of the Hudson Highlands. The construction of five dikes or dams, only one of which would be of substantial size, would create a reservoir having a surface area of about 240 acres and an available storage capacity of about 25,000 acre feet between elevations 1160 and 1000 feet above sea level. The natural Hudson River, which, at the proposed plant site is essentially an estuary of the Atlantic Ocean with semidiurnal tides and a width of a mile or more at that point, would constitute the lower reservoir. This reservoir would have, of course, an unlimited storage capacity with a water surface at about zero feet elevation above sea level. The upper reservoir would require no spillway for the purpose of providing discharge capacity for rainfall runoff since the water shed is practically the reservoir itself.

The water passage would consist of a concrete-lined tunnel, through granite, 40 feet inside diameter and about 10,000 feet long, a concrete-lined subsurface manifold, and eight steel-lined penstocks. Water from the upper reservoir would be conveyed through the tunnel, thence through the manifold, and through the penstocks to the pumping-generating station.

The pumping-generating station would consist of an outdoor type station with reversible pump-turbine and motor-generating units and other auxiliary facilities. Eight pumping-generating units each rated at 225,000 kilowatts but capable of generating about 250,000 kilowatts under a gross head of about 1,060 feet would be installed.

The units would generally act as motor-pumps and use off-peak energy furnished from non-project and steam-electric or other facilities to pump water from the Hudson River to the upper reservoir. The pumps would be provided with very reliable means of automatic shutdown when the water surface exceeds elevation 1160 feet. (*Infra*, p. 476). During on-peak hours, the units would reverse direction of rotation and act as turbine-generators furnishing energy to the load by releasing water from the upper reservoir through the turbines to the Hudson River. This cycle of operation would be repeated daily when the plant is in operation and advantage of weekend storage could also be utilized. The plant could also be kept idle, or partially loaded or spinning without water, as a power reserve for the Applicant's, and other, loads in the area.

When generating, the station would discharge between about 25,000 and 27,000 cfs, and when pumping, it would draw between 14,000 and 22,000 cfs.

The transformation from motor-generator voltage of about 17 kv to 345 kvs would be by transformers located at the station and the power would be delivered by submarine cable from the west to the eastern shore of the Hudson River.

About 1.6 miles of underground cable, interconnected to the submarine cable would extend to a switching station which would be located on the east side of the river and about three-fourths of a mile inland therefrom. At that point, the underground cable would connect with two 345 kilovolt overhead transmission lines which, as Con Edison proposes, would run south about 23.4 miles to the Applicant's existing Millwood substation, and thence south about 19 miles on an existing right-of-way to Applicant's new Sprain Brook substation.

No lands or reservations of the United States would be affected by the proposed project.

Estimated Cost

The estimated cost of the project, including transmission facilities to the point of connection with Con Edison's other facilities, would be $161,420,000 consisting of the pumped-storage works (including step-up transformers and switch yard at the plant) costing $129,400,000, and a two-circuit 345 kilovolt transmission line from the Cornwall pumped-storage plant to a new Sprain Brook substation, the cost of which was estimated at $32,020,000. The latter also would include the submarine river crossing and the underground section of line between the easterly terminus of the submarine cable and the Cornwall east switching station. A comparison of annual costs as computed by the Staff and the Company shows relatively little difference. The Staff's cost, however, reflects standard procedure for such purposes and as the Staff proposes, the latter's figures, $21½ million, will be accepted.

Economic Feasibility

The estimated cost of the project as proposed, including transmission to the point of connection to Applicant's system, is $89.70 per kilowatt. The Company made an economic evaluation of the project by comparison with the costs of a conventional single-reheat thermal plant of the same capacity comprising two 900 megawatt units installed in New York City. The cost of a thermal plant of 1800 megawatt capacity so installed was estimated at $125 per kilowatt or a total of $225,000,000.

In the relative evaluation of the pumped-storage and a thermal plant, consideration was given to the fact that the pumped-storage plant would be a peak-load facility with generation limited to peak-load periods. Generation at the project was estimated at 650,000 megawatt hours for a typical year, resulting in an annual capacity factor of 4.1%. The comparable thermal plant would supply initially both base-load and peak-load energy and was estimated to have, in the early years, a generated output of 10,650,000 megawatt hours and an annual capacity factor of 67.5%. The thermal plant was, therefore, credited with full replacement cost for base-load generation of 10,000,000 megawatt hours at a system fuel cost of 3.4 mills per kilowatt hour.

The cost of pumping energy was estimated on the basis of supply from Applicant's thermal plants at an approximate incremental cost of 2.6 mills per kilowatt hour which is equivalent to approximately 3.9 mills per kilowatt hour of hydrogeneration. On this basis, there was indicated an economic advantage for the pumped-storage project of $8,192,000 per year or $4.55 per kilowatt hour.

The transfer of capacity from hot reserve status to cold standby status which Cornwall would make possible would result in estimated combined operating and maintenance savings amounting to $2,850,000 per year and the net fuel savings is estimated at $1,130,000.

The total monetary advantage of Cornwall would be, assuming a capacity of 1,800 megawatts, about $12,000,000.

The Staff, too, submitted an economic feasibility study. It agreed in general with Applicant's study except that it assumed a dependable capacity of 2,000 megawatts rather than 1,800 megawatts. Thus the Staff arrives at a net annual value of power of $15,663,000.

No evidence to the contrary was presented and there is no doubt as to the economic advantage of the Cornwall project.

However, the Staff has undertaken a study of the economics of future units, and based thereon, the conclusion was reached that it is reasonable to provide for the future expansion of the plant to 3,000 megawatts. The net annual benefits for the 1,000 megawatt increment would amount to about $4,270,000. Thus, from the Cornwall project with 3,000 megawatts, the net annual benefits would amount to about $19,933,000.

Advantages of the Cornwall Project

Basically, the Cornwall project would be used to supply daytime peak loads, but it would also provide emergency standby power. The most efficient and economical use of conventional steam construction is found in large thermal generating units. However, such a unit, or units, would not be as economical to meet Con Edison's peak requirements as would a pumped-storage plant because the installation cost per kilowatt for the former is higher and the capacity is not useful during the off-peak load periods. Excess capacity at Con Edison's thermal units can, though, be used economically to provide the power to operate the pumps at the Cornwall project during the night hours to fill the reservoir for use in the generation of electricity during the daytime on peak loads. This operational technique permits uniform, around-the-clock, operation of Con Edison's efficient large thermal units.

Electric service reliability, everywhere desirable, is probably more important in New York City than anywhere else in the world. But, although reliability is a matter of the greatest concern to Con Edison's management, thermal electric generating equipment is comparatively poor in this respect. Steam boilers operate at high temperatures and pressures and steam turbines at high speed and, accordingly, they are the source of a great deal of trouble. The testimony of Mr. Harland C. Forbes, Con Edison's board chairman, is that:

> During the past few days on our generating system in New York, due to troubles of various kinds, we had a total of about 2 million kilowatts of

generating capacity out of service at one time—about one-third of our entire generating capability.

Month after month, Con Edison has experienced outages in the order of 1,500 megawatts. The risks associated with the operation of thermal electric generation become greater as the size of the thermal generating units grow larger.

The testimony is that nuclear plants are not suited to meet peak-load purposes, that such plants are economically feasible only if quite large and when operated as part of a utility's base generation and that they must be operated at as high a capacity factor as possible.

The record discloses that the hydroelectric generating units which would be installed at Cornwall are simple, rugged devices which would operate at low speeds and would be well-nigh trouble proof. There would be no boilers or complicated auxiliary devices. Even as compared with other hydroelectric plants, Cornwall would be of superior dependability because it would not be subject to the vagaries of stream flow nor would its performance be restricted by temporary blockages of ice packs.

"From every point of view," Mr. Forbes testified, "it seems clear that the plant will represent the ultimate in reliability."

The testimony reveals that there are a few other sites of this nature which could be developed in the same general area but none of them appeared to have natural advantages to the same degree as Cornwall and none would seem to permit as large an economical power development as this project.

The use of Cornwall would permit Con Edison to load its thermal units at a slower rate than is currently practical and there would thus be minimized stack emissions normally arising from thermal units. This factor, together with the prospect of the wider use of electricity for space heating purposes made available by this plant for such purpose would seem to justify the expectation of substantial assistance in Con Edison's effort for the reduction of air pollution, an ever increasing problem in the metropolitan area.

Mr. Forbes testified further that in addition to the other advantages the availability of the Cornwall plant would enable the Company to assist neighboring utility companies far more effectively than it has in the past. As a result, he said, the assurance of electric service reliability resulting therefrom would be felt over a wide area to the lasting benefit of millions of electric customers.

Con Edison is already interconnected with the electric utility systems in New York State, including a recently installed 345 kilovolt tie line to Niagara Mohawk. Another such tie line with Public Service Electric and Gas Company of New Jersey has recently been placed in operation. Still another is under construction for a connection with Connecticut Light and Power Company and plans are well advanced for an interconnection with the Keystone Project. Con Edison has a verbal agreement with Central Hudson Gas & Electric Corporation which serves among others, The Town of Philipstown, to sell the latter a proportionate share of the Cornwall output, amounting to about 100,000 kilowatts. The availability and the dependability of the Cornwall plant would thus be helpful to those utilities interconnected with it.

Alternative Units Suggested by Scenic Hudson—Scenic Hudson does not deny Con Edison's need for the additional peaking and emergency capacity, nor that the Cornwall project would supply such electricity in the manner and with the degree of economy contemplated by the Applicant. Basically, this intervenor simply contends that the Cornwall project would impair the scenic and historical resources and would adversely affect the recreational resources of the area, and to meet the hypothesis that some impairment of these resources and some adverse effect thereon may be justified on the basis of the need for additional sources of power, Scenic Hudson insists that Con Edison's peaking requirements can and should be provided by other means.

After all, Scenic Hudson argues, the Applicant is now in its 80th year of operation and in its 142nd year of the existence of the company and its predecessors and up to this time it has been able to meet its peak-load requirements in one way or another. In this connection, this intervenor points to the several steps Con Edison has and is taking to provide the capacity which it needs. "The important factor, however," Scenic Hudson concludes, "is that the company is now meeting them and doing so without a plant such as that proposed at Cornwall."

Thus Scenic Hudson seems to contend that since Con Edison has managed up to this time in one way or another to meet its peak loads; seems to have been satisfying its peak requirements by using its less efficient steam generating facilities and by purchasing power from others; and is taking other steps to insure the availability of enough power for the needs of its customers, the Cornwall plant is not in and of itself necessary. In this context, a witness for this intervenor made a comparison of costs of a conventional single-reheat thermal plant such as the Applicant employed in its economic evaluation study with the unit costs of Cornwall pumped-storage plant and with the cost of three alternative potential peak-load plants, which, Scenic Hudson argues, "could be used in lieu of the Cornwall pumped-storage project." The alternatives on which Scenic Hudson secured information were (1) a gas turbine Reserve Power Plant which would be manufactured by General Electric Company, (2) a Ready Reserve Steam Turbine Power Plant by Babcock & Wilcox, and (3) a gas turbine Jet Power Plant by Pratt & Whitney Aircraft.

The General Electric gas turbine would cost $75.00 per kilowatt installed in New York, but this price does not include the cost of the site and its preparation, railway spur, cooling water, fire protection, natural gas pipeline with valves, etc., if natural gas were used as fuel, communication link for control, other communications, excavation for foundations, station grounding grid, liquid fuel unloading and storage facilities and high stack. The Babcock & Wilcox steam turbine would cost $71.00 per kilowatt installed in New York, but this price does not include the cost of the site and its improvements, buildings including equipment, liquid fuel, unloading and storage facilities and high stacks.

The Pratt & Whitney Aircraft jet plant would cost $64.00 per kilowatt. The record shows that this is a gas turbine unit. Perhaps six or seven of these units with 10 jet engines in each unit would be required to make available 1800 megawatt capacity. It would require 8 minutes to start each of those units and it is unlikely that all of them would be started simultaneously. Consequently, this type of engine is not suitable for spinning reserve on a continuing basis. The cost per kilowatt hour for power generated by such a unit would be, Scenic Hudson's witness conceded, "relatively high," possibly as much as 11.6 mills per kilowatt hour.

Furthermore, at the request of a representative of the Philipstown Citizens Association (who appeared and made a statement of that Association's position), a representative of Con Edison met with him and representatives of the Pratt & Whitney Company, the makers of one of the alternative power units considered above. At the conclusion of the conference the manufacturers' representatives announced that the Pratt & Whitney Aircraft Jet Power Unit discussed above cannot provide the same advantages as would the Cornwall project.

Scenic Hudson's witness was unwilling to identify the kind of peaking plant which might properly be used for the purpose of comparison, insisting that such a choice was the responsibility of the Applicant.

It should be noted that Scenic Hudson does not contend that any of these alternative units could be used in lieu of the Cornwall project. This intervenor's witness testified that he would not go so far as to say that the units he had suggested could not be used in lieu of Cornwall, but he conceded that none of them would be entirely suitable for supplying the spinning reserve desired at Cornwall.

Applicant's principal policy witness had testified that reliability of the source of power was a most important consideration to the Company in serving its large and densely populated service area. Availability, that is, the ability to place additional generation on the line promptly, is another very important consideration. The General Electric Company reserve power (gas turbine) unit cannot be run continuously on spinning reserve. The fuel cost for such an operation would be prohibitive. Neither is the Babcock & Wilcox Company ready reserve (steam turbine) unit suitable for this purpose.

In rebuttal, Con Edison's vice president testified that none of the three alternative units employed for comparative purposes by Scenic Hudson is comparable in any way with the unit advantages offered by the Cornwall pumped-storage project. None of the three could provide the instantaneous spinning reserve capacity which would be available at the Cornwall project. Nor would any of them provide the same degree of reliability and none would contribute to the improvement of the air pollution condition in New York City. The evidence is persuasive that in the absence of highly expensive construction or equipment these alternative units would produce greater problems of sound creation.

The evidence is quite convincing that the Cornwall project is superior in many important respects to any other type of plant suggested or discussed on the record in this proceeding, including the alternative units suggested by Scenic Hudson. Indeed, Cornwall's superiority over those units is so marked that unless some other more compelling reason appears, the public interest would seem to be best served by the issuance of the license sought herein.

Safety of Dikes—In the natural depression formed by White Horse Mountain, Mount Misery and surrounding ridges is presently a small reservoir which supplies part of the water service to the Village of Cornwall. The project reservoir would occupy this natural depression and since it would be considerably larger (and the water level higher) than the present reservoir, 5 dikes would have to be constructed between the several high points. These dikes were designed by a highly reputable and responsible engineering firm. The largest of them (Dike No. 3) would be located in the northeast sector of the reservoir; it would be about 2700 feet in length; and it would have its foundation at approximately 900 feet and its crest at elevation 1170 feet. The next longest dike (Dike No. 1) would be about 2000 feet in length and located on the west side of the reservoir.

Someone, presumably a resident of the area, has been quoted in a newspaper article as saying that the projected 250 foot dikes atop Mount Misery and White Horse Mountain are "so flimsy they could burst and flood the lush slopes and valleys with a billion gallons of sewage-polluted saline water pumped from the Hudson." No one came forward at the hearing with any such contention and there is no evidence in the record to support such a statement. In fact, all of the evidence is to the contrary. Not even Scenic Hudson makes such a contention.

Geological studies which included a large number of borings along the lines of the proposed dikes were made to test the soundness of their foundations. Based upon those borings and his otherwise knowledge of the geology of the area, a well-known and reputable geologist testified that although there were minor faults underlying some of the dikes, the project presented no geological problems of magnitude and the dikes, constructed as planned, would be absolutely safe. In fact, he said he thought they were "over-designed, over-safe."

A partner in a consulting firm with wide experience in the field of rock-fill dams called in by the designers reviewed the designs and testified with respect to the stability and the safety of the dikes. He said that he reviewed a geology report on the site, two reports on seismological surveys, the results of boring explorations at the site and in the border area for impervious soils, the results of soil tests and plans and drawings for the reservoir and dikes. He testified that on the basis of his experience with similar structures the sections of dikes proposed by the Applicant herein "are safe and highly conservative." Considering the excellent quality of rock in the foundations and the bottoms, he added, they will produce completely safe dikes if reasonable controls and precautions are provided. He recommended that devices be installed which would give ample warning of potential instability and permit corrective measures. Another witness, a consulting engineer, with long experience in the field of rock-fill dams, testified that the foundation conditions at the site, the quality of the available materials for constructing the dikes and the design all assure a safe structure.

The Staff of the Commission accepted the findings of Con Edison's geologists with respect to the adequacy of the dike foundations. A Staff witness testified that the slopes of the dikes were conservative for such rock-fill dams and that a review showed them to be safe against surface slides or major slides; that the core should be safe against piping based on using proper filtering zones between the core and shell materials.

It is recognized that provision must be made to assure that water pumped from the river would not overflow the crests of the dikes. First, it should be pointed out that the maximum water level of the reservoir would be 1160 feet while the minimum crest elevation of all dikes would be 1170 feet above sea level. The operation of the Cornwall project would be controlled from Con Edison's Indian Point Generating Station in Buchanan under schedules established by the Company's Energy Control Center in Manhattan. At the Center, water level indicators, emergency shutdown controls and indicators of the status of machines and loading would be provided. Indications from these devices would be transmitted over two separate circuits so as to insure that at least one circuit would be in service.

As a further precaution, two devices which would initiate automatic shutdown would be installed. To insure that these tripping circuits would always be ready, they would be monitored and the loss of continuity, if any, would be reported and the pumps shut down immediately. In addition, the pressure activated devices would be periodically tested.

The Company thought the dike design and the warning and control systems described above entirely adequate to protect against any risk of overtopping. The Staff, however, thought it desirable for the Company to raise four of the dikes a minimum of 3 feet to prevent overtopping, and that the crest and toe of the dike facing Clove Creek be reinforced. In deference to their suggestion, Con Edison had the dike designers prepare a design that would raise the crest of the four dikes by approximately 3½ feet and would provide for the reinforcement of the crest and toe of the Clove Creek dike. This change would require an additional expenditure of about $60,000.

While the provisions against overtopping which the Applicant proposes would seem to be entirely adequate to insure the safety of the dikes, the additional precautions recommended by the Staff appear to be well worth the additional cost. Accordingly, the license issued herein will contain such a condition.

Impact on Cornwall Water Supply—As has already been said, the construction of the project reservoir would cause the inundation of the present small reservoir lying within the depression formed by White Horse Mountain, Mount Misery, and the surrounding ridges. This reservoir is identified as the "upper" reservoir and is located on land owned in fee by the village. The village leases three other reservoirs from the Harvard Black Forest Corporation under a 99-year lease with an option to renew that lease for an additional 99 years.

The upper reservoir presently retains approximately 62 million gallons of water at its maximum level and it is an important component of the village's total supply system. The water from this reservoir is of a very high quality and its loss without adequate replacement would leave the village with a less than satisfactory water supply during the summer months. If, then, Con Edison is to acquire the village's upper reservoir and the adjacent properties for the purposes of the project storage reservoir, it is essential that the village develop alternative sources of water supply.

The village employed a consulting engineering firm with extensive experience in such matters to conduct investigations and studies into the municipality's existing and reasonably foreseeable water requirements and to plan the redevelopment of its water system in order to meet those requirements. The studies revealed that the construction of a new large reservoir within the drainage area would not be feasible and that the only practicable method of increasing capacity would be by the construction of a new larger dam at one of the lower ponds; the construction of a well field approximately 4 miles to the west of the center of the Village of Cornwall and the installation of a connection to New York City's Catskill Aqueduct which passes in the vicinity of the Village of Cornwall. The village does not presently have a filtration plant nor is filtration presently necessary with respect to the reservoir and well water. However, such a processing plant will be constructed for use in connection with water taken from the Catskill Aqueduct.

The senior partner of the consulting engineering firm testified that in his judgment the loss to the Village of Cornwall of its upper reservoir would not be detrimental to the village's water supply if the recommendations his firm had made to the village were carried out. In fact, he thought that the development he had proposed would insure to the village a more adequate supply of excellent water than it presently has and that the system would meet the village's needs for years to come.

The Trustees of the Village of Cornwall have approved the program recommended by the engineering firm, and they submitted an application to the New York State Water Resources Commission for approval thereof. Hearings were held before the Water Resources Commission on that application on February 27 and March 19 and 20, 1964. On May 7, 1964, the Water Resources Commission issued its decision in which it determined and decided that:

> First. * * *.
>
> Second. That the plans proposed are justified by public necessity.
>
> Third. That said plans provide for the proper and safe construction of all work connected therewith.
>
> Fourth. That said plans provide for the proper protection of the supply and the watershed from contamination and for the proper treatment of such supply.
>
> Fifth. That said plans are just and equitable to the other municipalities and civil divisions of the State affected thereby and to the inhabitants thereof, particular consideration being given to their present and future necessities for sources of water supply.

> Sixth. That said plans make fair and equitable provisions for the determination and payment of any and all legal damages to persons and property, both direct and indirect, which will result from the execution of said plans or the acquiring of said lands.

It is perfectly clear that the plan for the development of other and additional sources of supply of water from Cornwall although entailing the loss to the village of the upper reservoir would not adversely affect the interests of the residents of the village but, on the contrary, would constitute a substantial improvement in the municipality's water supply situation, and would, therefore, be greatly in the public interest.

Impact on Scenic, Historical and Recreational Values

A large number of individuals and several local organizations have filed with the Commission objections to the construction of the proposed project. In most instances, the objections have been based upon the assumption that its construction and operation would inevitably impair the scenic beauty of the area. Some of such objectors have assumed, too, that the existence of the project reservoir, because of the use of Hudson River water, would result in pollution of ground waters in the area. Others are persuaded that the project would seriously impair the use of the area for camping, hiking and other such recreational activities.

More specifically, Philipstown and, in general, the objectors residing on the east side of the river, direct their attack on any of Applicant's overhead transmission lines which might traverse that area. Philipstown, of course, participated in the hearing and presented evidence in opposition to the construction of any such transmission lines through that town. This subject will be discussed separately and in greater detail under the discussion of the impact of the project in the transmission line area.

Scenic Hudson, its brief asserts, is concerned with the preservation of the area on or adjacent to the Hudson River, which, the intervenor asserts, is the heartland of the Hudson Highlands. In Scenic Hudson's opinion, "the proposed Cornwall pumped-storage project, consisting of a tremendous power plant gouged into the north side of Storm King Mountain, large transmission lines on the east bank of the Hudson River and a large storage reservoir in the Highlands would * * * do irrevocable damage to an area of great scenic, historical and recreational value."

In view of this "irrevocable damage," Scenic Hudson contends that the peaking power requirements of Con Edison must and can be met in other ways. The "other ways" suggested by Scenic Hudson have already been considered and found incapable of providing the benefits which could be derived from the proposed Cornwall pumped-storage power plant.

Here it should be said that in order to achieve a clearer and more accurate picture of the natural and other conditions which exist there, the Presiding Examiner visited, on June 25, 1964, West Point, the reservoir site, the plant site, Stony Point and Nelsonville, and thereafter followed as closely as possible the route of the transmission line proposed by Con Edison from Nelsonville to the environs of Peekskill. The evidence in this proceeding respecting the impact on the beauty and recreational value is being evaluated against that background of personal knowledge.

To the extent that it has not been defiled by human hands, the area along the west bank of the Hudson River from Bear Mountain to Cornwall, including West Point and its environs, is indeed magnificent, as all who participated in the proceeding would readily agree. The eastern shore of the river between the

Newburgh Bridge and Cold Springs was also an area of unusual natural beauty. That the Hudson Highlands is also an area of considerable historical significance is not denied by anyone either. Scenic Hudson contends, however, that "one factor cannot be singled out and others ignored, such as considering the effect of the project on scenic resources and the ignoring of its impact upon the area's historical values." The import of this language in the context of this proceeding is not entirely clear, but one thing is quite certain. There are no buildings, monuments, restorations, sites or other such things of historical significance in or adjacent to the areas which would be occupied by either the reservoir or the power plant, and thus those features of the project could not directly impinge upon the historical values of the project area.

Before giving consideration to the evidence and arguments presented by Scenic Hudson, the contention of Con Edison, concurred in fully by the Village of Cornwall and at least partially by the Staff of the Commission, that the construction at Cornwall would enhance rather than detract from the recreational and scenic values of the Hudson Valley should be appraised. This contention rests upon evidence as to the present condition of the river front on the west side of the stream in the neighborhood of Cornwall and on the east side in the neighborhood of Stony Point.

Evidence was offered by the Village of Cornwall and by Con Edison with respect to the state and the condition of the waterfront upstream, that is, to the west and north, of the site of the proposed power plant. The evidence shows that north of the project site along the river there is located a large building that had been partly reduced by fire and which is presently used as a woodwork and lumber storage shop. There are also located in this area several old buildings used for chemical manufacturing. Near the project power plant site is the Cornwall Yacht Club which is employing as a breakwater a large abandoned sunken barge located at a point near the shore line. Further on up the river, there is, in order, a burned out coal dock and pier, formerly owned by New York, Ontario and Western Railroad Company, a village dump and there are marshlands south of the dump. A witness for Con Edison submitted for the record a series of photographs which show quite graphically the deplorable condition of the waterfront in the Village of Cornwall.[8]

This evidence is convincing that the river front on the west side of the Hudson and immediately north and west of Storm King Mountain is not now in its natural condition, and the structures which are presently to be seen there do not contribute to, but greatly detract from, the appearance of the waterfront in this area.

Although the cluster of old buildings described above would not be affected by the proposed power plant construction, the shorefront beyond them for a distance of almost a mile would be used by Con Edison for the deposit of spoil excavated from the power tunnel. The area would be graded, covered with topsoil and replanted. The Company proposes to then transfer this strip of river front to the Village of Cornwall for a public park. This would constitute a substantial improvement along the village waterfront and such a park would be of great recreational benefit to the residents of the village.

On the east side of the river, the waterfront in the neighborhood of Little Stony Point has also suffered serious defacement. A railroad line and a public highway traverse the water's edge, and two pole lines carrying large numbers of communication wires lie alongside the tracks. Five or six hundred acres with a frontage of about ¾ of a mile abutting the railroad and highway are owned by the New York Trap Rock Company. On that property, terraced up the face of Bull Hill, there is a series of unsightly buildings which were used in connection with the quarrying operations. Structures which contain facilities to convey the quarried stone extend over the railroad to other buildings on the waterfront. Quarrying has opened up, and there remain exposed to view, vast expanses of the rocky hillside, but the operations of the plant have been suspended and the structures are presently unoccupied and unused. The remains of an abandoned wharf and pier evidence earlier industrial activity, and the waterfront is literally strewn with debris. This stretch of shorefront is within the Town of Philipstown.

---

[8] About half way between Cornwall and Newburgh, there are, along the river's edge, a number of large petroleum tanks that are far from attractive, and from that point upstream and beyond Newburgh, the waterfront is almost continuously commercial and industrial revealing nothing in the way of natural beauty.

Con Edison's chairman testified that despite the present deplorable condition of the waterfront at Little Stony Point, basically the area is outstandingly scenic and for this reason the Applicant yielded to the pleas from various sources that it place its transmission lines underground along this stretch of the river. The decision was partially influenced by Con Edison's hope that the Philipstown authorities might take steps to remove the unsightly structures and clean up the waterfront. In addition, Con Edison's chairman indicated that the Applicant might be able to contribute to an effort by the town, if one were made, to create, by the use of spoil from the construction on the west side of the river, a fine waterfront along this part of the shore.

It is clear from the foregoing that the appearance of the Cornwall waterfront adjacent to the area the power plant would occupy and the stretch of the river in the neighborhood of Little Stony Point on the east side thereof, would be substantially improved if Con Edison's proposals were accepted. It is not enough, however, to find that presently these areas are less attractive than they were in their natural condition and should be improved upon in order to justify, in the public interest, other damage to the natural beauty of the area if that might result from the construction and operation of the Cornwall project. It becomes necessary then to consider the evidence in the record relating to this issue.

Two of Scenic Hudson's witnesses addressed themselves to the subject of the scenic and historical values of the Hudson Highlands. One of them was the well-known author, soldier, teacher, editor and writer of many and varied articles and narrations, Carl Carmer. Mr. Carmer, who resides at Irvington-on-Hudson, is the author of some 30 books, among them, *The Hudson*, *The Susquehanna*, *Listen for a Lonesome Drum*, *Dark Trees to the Wind*, *Genesee Fever*, and, perhaps the most widely known, *Stars Fell on Alabama*. Mr. Carmer is first vice president of the Hudson River Conservation Society and president of Boscobel Restoration, Inc. With eloquence, he stated for the record his opinion as to the significance of the Hudson River as a national heritage. After reviewing briefly some of the incidents which occurred in the revolutionary period and commenting upon the architectural and artistic attractions of the Highlands, he presented a telling argument in support of conservation as a national policy, with specific application to the Hudson Valley. He expressed the belief that true progress is made when the people preserve their inheritance of scenic, historic and recreational values as essential to their lives. He undertook, however, no specific evaluation of the impact of the proposed project on the natural beauty, the historic values or the recreational opportunities of the area.

The other of those two witnesses was Benjamin West Frazier, resident of the hamlet of Garrison, a scholar, a member and erstwhile president of the Putnam County Historical Society, a combat correspondent for *Yank* Magazine and a frequent lecturer to groups and historical societies on the history of the Hudson

Highlands. Mr. Frazier has been a member of the Hudson River Conservation Society since its organization and is presently a vice president of that organization, a member of the Constitution Island Association since childhood and chairman since 1948. In 1955, he organized Boscobel Restoration, Inc., and has served as its president and vice president. Mr. Frazier testified that he had restored ten historic houses in the Highlands and has served as advisor in numerous other restorations in the area.

This witness presented a map showing the Highlands of the Hudson from Bear Mountain Bridge north to the City of Newburgh, on which he had located a large number of historic spots including West Point and in connection therewith presented a brief description of the historic significance of the points indicated. He emphasized the importance of West Point as a tourist center and disagreed with the testimony of a Con Edison witness to the effect that the proposed switching station at Nelsonville could not be seen from the parade grounds at the Academy.

Both Mr. Carmer and Mr. Frazier are conservationists and protectionists dedicated to the preservation of natural beauty and historical building sites and areas and they have devoted and continue to devote without expectation of compensation to these highly commendable activities. One need only travel by car from the George Washington Bridge to Bear Mountain Bridge over the Palisades Parkway noting the deplorable condition of the approach to the former to appreciate the tremendous contribution the men and women who are devoted to protection and conservation have made to the present and future of America. There is due them a great deal of gratitude and respect.

As has been said, that the Hudson Highlands and the Hudson River Valley from Cornwall-on-Hudson south to Bear Mountain and below are areas of unusual natural beauty and rather exceptional historic significance has not been controverted by anyone. With what seemed to be a spirit of local pride, Con Edison said in its brief:

> Con Edison is happy to concede that the Hudson River Valley is one of the most beautiful scenic areas in the United States. It has long been a mecca for artists and writers, who have perpetuated its natural loveliness in paint and prose. By the same token, Con Edison is equally willing to concede that historically the area around the Hudson River Valley, particularly near the Hudson Highlands and including, of course, West Point itself, is fraught with interest and steeped in national tradition.

But Con Edison insists that its planning from the beginning has been consistent with the preservation of the scenic and historical values of the Hudson River Valley. The evidence bears out Con Edison's assertion that in this process it has consulted with officials of the Palisades Interstate Park Commission, the Hudson River Conservation Society and with other individuals and groups in the area who have been willing to offer constructive suggestions. Applicant insists that it has always cooperated and will continue to cooperate with the Palisades Park Commission and local agencies to insure the preservation and protection of scenic values in the valley.

In this connection, it should be said that while the Palisades Park Commission favors natural beauty and the maintenance in their natural state of park and recreational areas, that Commission has interposed no objections to the Applicant's proposal. It should also be noted, as clearly appears from Mr. Frazier's testimony, that there is a rather definite disagreement between the members of the Hudson River Conservation Society as to the extent to which that organization should object to the project proposed herein by Con Edison. It seems clear that whether all conservationists and protectionists favor the maintenance intact of natural beauty, some are prepared to make pragmatic adjustments arising from off-setting public interests.

In any event, however, the problem cannot be solved in such general terms, nor by appraising the proposal as a unit. Actually, because of the nature of the project, its impact upon scenic and recreational values can only be assessed by considering the evidence in three separate areas, (1) the reservoir area, (2) the power plant area and (3) the transmission line area.

In the Reservoir Area—As has been said, the reservoir would be created by the construction of five dikes between the ridges surrounding Cornwall's present upper reservoir and the consequent increase in elevation of the water to 1160 feet. The dikes, other than Dike No. 3, would be quite remote from any open or paved roads and would, therefore, be relatively inaccessible to persons other than those on foot. Although Dike No. 3 would not be a great distance from Highway 9W, it would be substantially above it in elevation. Because of the difference in grade when the adjacent trees and shrubbery are in foliage (which would be the condition during most of the tourist season), none of the dikes could be seen from any vantage point except alongside them and at the same level.

The dikes would be constructed in a curvilinear design so that from the air the reservoirs would have a more presentable and natural scenic appearance. The testimony is that the dikes would be so arranged that from that vantage point, the reservoir's surface would be pleasing in shape and appear as a naturalistic lake. The evidence is persuasive that the reservoir would not be visible from any public highway and would be screened by woods from any local trails.

The area immediately adjacent to the present reservoir for from 25 to 50 feet is closed to the public and no hunting, fishing, or other trespassing is permitted in that area. The remainder of the village property is, however, open to the public and some hikers tramp around the perimeter of the pond. That the present reservoir area is to a limited extent, at any rate, used for recreational purposes is evident from the discarded beer cans which can be seen there.

The mountain area adjacent to the village reservoir is owned by several large land holders, the largest being Harvard University which is the owner of the tract know as the Black Rock Forest. This forest, consisting of roughly four thousand acres, lies to the west and southwest of, and quite near, the present reservoir. It consists of a number of peaks and includes also several ponds. About 70 acres of forest property would also be inundated by the proposed project reservoir. Otherwise, the Black Rock Forest would be unaffected. The testimony relating to the extent to which the Harvard Black Rock Forest is open to the public is conflicting. The mayor of the Village of Cornwall testified that the entire acreage is closed to the public, and except by special permit, the use of the area is forbidden. The son of the donor of the property to Harvard University[4] testified that to his knowledge hiking had never been prohibited in the area which would be flooded by Applicant's proposed reservoir, but its use by hikers is very sparse. This witness testified that in the area to be occupied by the larger reservoir there are not any hiking trails. However, a witness for Scenic Hudson testified that one or two trails pass very close to the upper reservoir. Hunting and fishing in the forest are prohibited except to members of the Black Rock Club. There is a public road which enters Black

---

[4] This witness, deputy to the Secretary of Commerce of the United States and in that capacity a participant in the Recreation Advisory Council in the Department of the Interior, testified in support of the Cornwall project expressing the opinion that with respect to the reservoir area it would increase the recreational potential thereof.

Rock Forest at a point quite close to the village's upper reservoir and runs from there back into the forest. But that road is and has been gated and the gate has been locked for a number of years. Only those having keys can enter upon this road.

Since the level of Con Edison's upper reservoir would fluctuate widely on an almost daily basis as water is pumped into the reservoir for storage purposes and withdrawn for generating purposes, the reservoir would not support public recreational activities such as boating and swimming. The reservoir area at present and, as it would be if the reservoir were enlarged, is hilly and rocky and not suitable for general recreational purposes. The Applicant, therefore, proposes that public access to the reservoir be prohibited and the reservoir itself enclosed by fencing.

Scenic Hudson also called as a witness Leopold O. Rothschild, a member of The Landmarks Preservation Commission of the City of New York, a member of and active in The Citizens' Union, a director and member of the Legislative Committee of The Citizens' Housing and Planning Council, a director and conservation chairman of the New York-New Jersey Trail Conference and a member of The Nature Conservancy.[5] For more than 55 years, this witness, who resides in a 13-story apartment house on West End Avenue in New York City, has hiked the dirt roads, the trails and the forests in the neighborhood of New York City. Mr. Rothschild has, during all this time, been deeply interested in the natural beauty of the area and has labored long and arduously, entirely without compensation, for the preservation and conservation of that natural beauty. His activity resulted in the acquisition by the Palisades Park Commission of the land between Highway 9W and the cliffs which extend between the George Washington Bridge and the New York-New Jersey State Line.

The Highlands are largely publicly owned on the west side of the river. On the eastern shore, however, the property is almost all privately owned. Mr. Rothschild expressed the opinion that "the proposed Con Edison pumped-storage plant would be a major defacement of the north gate of the Highlands." This witness adopted, as reflecting his views, the language appearing in a newspaper editorial which expressed the view that "to plunk down a couple of power installations in this area would be almost as bad as constructing a utility plant in the middle of Central Park." Mr. Rothschild felt that "from a recreational point of view, the plant is deplorable."

Mr. Rothschild testified that the New York-New Jersey Trail Conference maintains about 17 miles of trails through the Black Rock Forest and that those trails were extensively used. Although as has been noted there is evidence that the reservoir area is frequented to some extent by persons bent on recreation, a visit to that area is persuasive that aside from access to the adjoining rifle range, the area adjacent to the present reservoir is not used extensively for hiking or camping purposes.

A personal inspection failed also to disclose evidence that the use of the 70 acres of Black Rock Forest, which the Applicant proposes to acquire in connection with the larger reservoir, impairs in any way the use of the forest for recreational purposes.

In response to this Commission's invitation, the Secretary of Interior has submitted comments on the Cornwall project. He found that there are no fishing considerations in connection with the proposed upper reservoir, but he suggested that the Applicant consult with the New York State Conservation Department to determine wildlife potentials and possible management measures. The Secretary felt that screens or other devices should be installed to prevent fish in the river from being drawn into the pumps and suggested that the Applicant, the United States Fish and Wildlife Service and the Division of Fish and Game of the New York State Conservation Department should cooperate in the design of the required fish screen or other exclusion devices.

---

[5] An agency interested in the acquisition of particularly interesting spots of land throughout the country, the nature of which is threatened. For example, it purchased some 6,000 acres in California in order to preserve a particularly magnificent stand of Redwood or Douglas Fir and the Sunken Forest.

Representatives of Con Edison have met with representatives of the New York State Conservation Department and have completed and submitted to that department and to the United States Department of the Interior plans for fish screening devices which Con Edison believes will be adequate to protect the Hudson River fish life from being drawn into the tunnel.

The Applicant employed to advise as to any effects the Company's proposed project might have upon the fish life of the area an associate professor of biology with New York University who appeared as a witness in this proceeding. This witness has an extensive background of study and experience over a period of 30 years in the field of ichthyology and acquatic biology including long familiarity with the fish life found in the estuarian section of the Hudson River where the project would be located. He examined the fish screening devices the Applicant proposes to install, considered the Company data with respect to the use of the project for pumping the water from the river to the upper reservoir and the flow of the water in its return to the river, the approximate rates of discharge during the two operations, the velocity of the water and the tailrace which would serve the point of both intake and discharge, and he made some computations of the anticipated temperature variations between the water discharged and the water in the river.

He concluded that there would not be a variation in temperature of such magnitude as to constitute an attraction to the fish, that the velocity of the water into the intake would not endanger the fish, and that the screening devices Applicant proposes to install would protect the fish from being drawn into the intakes. He expressed the opinion that there would be no appreciable effect of the proposed project on the fish life of the area in light of the over-all mortality rate of larva and the small fish.

The secretary of the New York State Water Resources Commission made a statement for the record on behalf of that Commission. That agency requests that the Applicant be required to provide assurances that adequate barrier facilities would be installed and maintained in the intake works to prevent the loss of fish. The technical staff members of the Conservation Department's Division of Fish and Game have reviewed Applicant's plans for a fish barrier screen and have found them adequate to prevent loss of adult fish of the species which might be affected. The possibility still exists, however, that extensive losses of eggs and/or young of valuable species might occur after installation of the proposed screening devices. The Water Resources Commission, therefore, requests that the Applicant take full responsibility for making needed practicable additions, improvements, or alterations if investigations disclose inadequacies of devices installed for fish screening purposes.

The Applicant has signified a willingness to accept a license containing a condition that the final design and construction details of the project plant be approved by this Commission. More specifically, the Applicant has consented to a condition as follows:

> The licensee shall construct, maintain and operate, such protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources, *provided* that

> such modifications shall be consistent with the primary purpose of the project, as may be prescribed hereafter by the Commission upon its own motion after notice and opportunity for hearing and upon a finding that such modifications are necessary and desirable and consistent with the provisions of the Act, and, *provided further* that, subsequent to the approval of the final design drawings prior to commencement of construction no modifications, of project structures in the interest of fish and wildlife resources which involve a change in the location, height, or main structure of a dike, or a major change in generating units, or a rearrangement or relocation of a powerhouse, or major changes in the tailrace structure shall be required.

The Secretary of the Interior also recommended cooperation between the Applicant, the Palisades Interstate Park Commission and interested state and local agencies and organizations to insure the preservation and protection of scenic values of the Hudson River Valley.

The Palisades Interstate Park Commission is a creature of Congress. It has jurisdiction over a park area lying on the west side of the Hudson River and extending from a line south of the George Washington Bridge to the south boundary of the City of Newburgh and into mountain land to the west thereof. The Storm King section of the Palisades Interstate Park which contains about 3,000 acres was established in 1922 when Dr. Ernest G. Stillman gave 800 acres to the park system. The total acreage of this section of the park system has been expanded by gift and purchase to 1,142 acres. This park area is used primarily for hiking purposes, but both the old and the new Storm King Highways pass through or near this section of the parkway. The Appalachian Trail, however, crosses the Bear Mountain Bridge from west to east and, therefore, does not go through the Storm King section of the park.

The general manager and chief engineer of the Palisades Interstate Park Commission appeared at the hearing to state the position of that Commission with respect to Con Edison's proposed project. The parkway will not oppose the project, he said, "provided that all reasonable steps are taken to preserve the scenery, and to make the powerlines on the east side of the river as inconspicuous as possible."

In a letter dated April 13, 1964, to a member of the Philipstown Citizens Association, the vice president of the Palisades Interstate Park Commission and the chairman of the State Council of Parks said of this project that:

> This is a problem in resource allocation among conflicting uses. The Palisades Interstate Park Commission approaches this matter with the attitude of arriving in the maximum project benefit from one use while limiting the damage to the other use to a minimum by working with the company.

In certain instances, the Park Commission grants easements for power and utility lines above ground and for water, sewer and gas lines below ground. The power tunnel which would extend from the upper reservoir to the power plant and river would be located in part beneath the lands of the Palisades Interstate Park Commission. Con Edison has offered to buy 150 acres of property adjacent to the reservoir area and transfer this tract to the Palisades Interstate Park Commission in exchange for the granting by that body to the Applicant of an easement for construction of the tunnel underneath the parklands. Con Edison further proposes that if it has to acquire any excess lands in this area for construction purposes, it will donate them upon the completion of the project, to the extent they are not necessary to its operation and maintenance, to the Palisades Interstate Park Commission. In this way, the area of lands available for parks, recreation and the other purposes of the Interstate Park Commission, will be increased.

In addition, Con Edison has verbal commitments to acquire property to the north of the power plant extending about 4,000 feet along the westerly river front. Under the supervision of the Corps of Engineers of the United States Army, pursuant to the usual provisions which will be contained in the license, Con Edison would use this property during the construction period for the deposit of soil excavated from the tunnel. Upon completion of the tunnel and the project, this property would be graded, adequately covered with topsoil and replanted. Con Edison proposes to then transfer this strip of river shore to the village of Cornwall for a public park.

A question has been injected into the proceeding by persons who did not appear or offer evidence, and by Scenic Hudson, as to the effect, if any, on ground water in the area of possible seepage from the project upper reservoir of water which had been pumped into it from the Hudson River.

At times, the Hudson River flowing past Cornwall is predominately fresh, while at other times it is somewhat saline as ocean water moves upstream from the sea. Raw sewage is dumped into the Hudson from a number of upstream communities, while others discharge wastes that have received the primary sewage treatment. The river also receives industrial wastes and sanitary sewage from a number of upstream industrial plants. Surveys of the river show the presence of oil slicks and debris, and it is not disputed that the stream should be considered polluted in the neighborhood of the Village of Cornwall. Statistics compiled by the U.S. Public Health Service for the period October 1, 1961 to September 30, 1962, showed the presence of coliform bacteria from sanitary sewage from several thousand to as much as 11 and 12,000 coliforms. The chloride content of the water has gotten above 1,000 parts per million at Breakneck Point opposite Cornwall. By comparison, the chloride content of ocean water is about 18,000 parts per million and the U.S. Public Health Service recommends that chloride drinking water should not exceed 250 parts per million.

A witness for Scenic Hudson testified that rocks of the type discovered in the reservoir are normally crisscrossed by a variety of openings and fractures some of which may be open enough to yield fairly large quantities of water. The ground water in the rock fractures is constantly in motion in a downhill direction, this witness said, and eventually finds its way into the brooks and streams that drain the hillsides. He testified that since the new reservoir would cover about 10 times as much land as the present one and the height of the water level would be increased approximately 200 feet there would be applied roughly a 10-fold increase in the head of the water and as a very rough estimate, then, 100 times as much water would seep downward from the proposed reservoir as now seeps downward from the smaller existing pond. The witness testified that he had no idea how much water would escape from the reservoir in this fashion except that it would be many times more than the amount now moving in the ground in the vicinity of the reservoir. There is a possibility, he said, that water from the Con Edison reservoir could seep underground into Black Rock Hollow and also into the tributary that drains Alec Meadow Reservoir above the existing filtration plant.

A witness for Con Edison testified, however, that disease producing organisms have limited lives, no longer than a week; that the time of travel from the upper reservoir any distance would be many days, months or years; that where the soil is not disturbed, it will act as a filter; and, in general, the rock throughout the area is not very permeable and the soil cover where present would offer an impedance to seepage. This witness also said that the existence of numerous lakes in the area indicates that the faulted zones are relatively impermeable and do not permit the water of the lakes to seep downward through the rocks at an appreciable rate. Another Con Edison witness said that he would consider it absolutely unnecessary to even think of lining the floor of the reservoir.

A witness for Con Edison testified, too, that the maintenance of a dozen lakes with water levels at high elevations above the Hudson River in the neighborhood of Cornwall demonstrates that in spite of the complex fracturing, faulting, weathering, and so forth, the underlying granitic rock is so impermeable that these bodies of water are maintained as retention reservoirs, perched high above the Hudson River. A study of the test borings, this witness continued, indicates that even without the impermeable dikes that are proposed, a water table along the topographic divide stands at a higher elevation than the proposed impoundment level of 1160 feet. It is obvious that even with the reservoir at an elevation of 1160 feet there can be no natural seepage of water because such seepage would be prevented by the downward water table in the areas above elevation 1160. It follows, therefore, he said, that if any seepage were to take place from a reservoir with elevation 1160 it would have to be vertically downward. If any seepage did occur, it would have to be small because of the impervious character of the granite bedrock at moderate to great depths.

While this witness agreed with Scenic Hudson's witness that any increase in head would increase the rate of seepage, he disagreed violently with that witness' statement that the increase would be in the ratio of 200 to 20. The proper ratio, he testified, was 977, the elevation of the current upper reservoir, to 1160, the elevation of the proposed upper reservoir, or an increase in head of 183 feet, or less than 20%, rather than the 100% that Scenic Hudson's witness had assumed using 200 feet and 20 feet, respectively.

This witness testified that in his opinion the present seepage out of the existing reservoir is entirely insignificant and a percentage increase would result only in a larger but still an insignificant volume. On cross-examination by Staff Counsel with respect to the effect of seepage from the proposed reservoir on wells outside the water shed area, the witness said:

> The seepage from the reservoir I would say would be negligible as compared with the seepage that would come from surface precipitation outside the reservoir area.

The preponderance of the evidence clearly supports the conclusion that there is no danger of seepage of any significant quantities of Hudson River water out of the proposed upper reservoir.

The evidence shows that safeguarding the quality of the Cornwall and Highland Falls municipal water supplies and the few domestic wells in the neighborhood was stressed during the initial investigations of the project site. Con Edison then directed the engineers in charge to set up and operate a sampling program at an early date and maintain it for several years after the completion of the project and the filling of the reservoir. Until such time as the reservoir is first flooded sampling and analysis will occur on a quarterly basis. After the reservoir is completed, the sampling will be on a much more frequent basis for about two years and it will then revert to a quarterly basis. Frequent tests will be made to determine whether the reservoir water is migrating outward and downward from the reservoir.

Con Edison's vice president testified that if the Commission has any doubt concerning the freedom from seepage of the project dikes it might insert in the license a condition providing that if, in the future, the reservoir is in operation, any seepage occurs causing appreciable damage to any stream, or public or private water supply, the Company will be obligated to take appropriate steps to remedy the situation or to compensate all persons injured thereby. Such a condition will be inserted in the license which will be issued herein.

In the Power Plant Area—Some three miles below Newburgh, the west bank of the Hudson River bends rather sharply to the southeast thus narrowing the stream and enabling it to pass between Storm King Mountain on the western and Breakneck Ridge on the eastern shores, respectively. The generating plant of the project proposed herein would be constructed on the west bank of the stream a very short distance to the northwest of the narrows and at a spot where the shoreline runs approximately east and west. The plant would face almost due north and substantially up the middle of the wider portion of the stream. The building housing the generating units would be placed directly inshore from the river with only the right-of-way of the New York Central Railroad between the stream and the plant. Behind the plant, Storm King Mountain would rise to an elevation of over 1300 feet above the river, which, at this point, is considered as zero feet above sea level.

The plant site throughout most of its width was, apparently around the turn of the century, terraced to permit the construction on the several levels of riverside summer homes. The project plant, similarly, would be terraced into and upon the northern flank of the mountain. Only the gantry crane and certain of the upper switchyard equipment, described below, would rise above the preconstruction grade of the plant site. The center line of the turbines would be 50 feet below the water line and the substructure would extend 80 feet below the river surface. The power station structure would be constructed of inconspicuous neutral colored concrete and would rise about 30 feet above the river level. The plant would thus appear to one upon the river in midstream as a building 30 feet in height and about 800 feet in width. At the plant roof level and extending back about 900 feet, largely into the excavated mountainside, would be the operating deck. Upon this deck would rest the gantry crane referred to above, a wheeled frame-like structure 90 feet in height resting upon tracks so that it could be moved across the structure above the operating units as the need for its services might arise. Most of the time the gantry crane would be parked at one end of the structure.

The only other equipment on this operating deck would be a transformer with its accessory lightning arrester. The testimony is that the transformer is an inconspicuous tank-line structure which would not protrude very much above the deck level. Behind this operating deck a rock wall would rise up from elevation 30 to 100. At the top of this wall would be the "second switchyard" which would extend back from the face of the rock wall about 122 feet. At the rear of this level also there would be exposed the stone of the mountain. The equipment which would be located on this "switchyard" is known technically as "the rigid bus type of structure," the explanation of which was that there are no high unsightly towers and no suspension of loose wires that blow in the wind. These structures, the testimony shows, are relatively low and slender, and the conductors are rigid tubing which tends to take on the patina of old age. This level would blend into the final grading of the project so it would be relatively inconspicuous.

Some 500 feet above the upper switchyard level the Storm King Highway cuts across the mountainside. The area between the upper switchyard and the highway is rather heavily wooded and when the trees are in leaf the plant could not be seen by those passing along the highway above. To the east of the plant there is also a rather heavily wooded area. On the west forestation is somewhat less but the evidence is that around the plant where and when it might prove helpful the area would be landscaped.

Only from the riverside and from positions relatively close to it could the plant be clearly seen. Con Edison has retained one of the country's leading firms of landscape architects to direct the landscape development surrounding the plant, the dike areas and all other areas denuded by construction work. A partner of that firm testified in some detail the plans for this work. He testified that even in those areas which could not be shielded from view the natural rock exposed would be attractive to the eye. All in all, this witness concluded, the river front section where the power structure would be exposed to view would be pleasing and infinitely better than the conditions that now pertain.

There is no evidence, and in fact no contention, that the construction of the power plant in and of itself would affect adversely the historic or recreational values in the area. It would, of course, result in a tremendous benefit to the waterfront and consequent recreational benefits to the Village of Cornwall.

In the Transmission Line Area.—Although conceding that the transmission line which would connect the Cornwall East Power House with its distribution center at Sprain Brook is a necessary part of the Cornwall project, Con Edison contends that the Commission has no statutory authority to dictate the routing of the line or the method of installation, that is, whether it would be overhead or underground. Con Edison asserts that the reports, orders and opinions of the Commission disclose no instance[8] in which it has prescribed in the order issuing a license the route or characteristics of the transmission line essential to the project contrary to the desires of the Applicant. But this would establish no more than that the question had not heretofore been raised.

Generally, in the past, hydroelectric projects have been located in relatively remote areas and the transmission lines have traversed regions sparsely settled and indifferent to such things. But, one would hardly contend that the conditions and practices of the past should be controlling today or tomorrow nor can there be agreement with Con Edison's contention that the Commission's statutory authority with respect to transmission lines extends only to engineering aspects including safety, stability and efficiency. We have already concluded that consideration of the application for a license for a hydroelectric project necessitates the appraisal of all factors having an impact upon the public interest, and such appraisal should hardly be confined to one of the principal project works to the exclusion of the others.

It is, therefore, concluded that it is the responsibility of the Commission in instances in which the issue is raised to determine in the public interest the route and nature, that is overhead or underground, of the primary transmission lines.

Initially, Con Edison had proposed that the major switching station be erected at the plant site and that the power be transmitted across the river by means of overhead lines. By February 25, 1964, because of strenuous objections thereto, this plan had been altered. Then Con Edison proposed that Cornwall power be transmitted through two 345 kilovolt submarine circuits crossing under the river, and that the switching station be erected on the east side of the river adjacent to the tracks of the New York Central Railroad in the Town of Philipstown. The change from overhead to submarine transmission for the river crossing increased Applicant's transmission line cost approximately $6.5 million.

---

[8] Staff Counsel, however, cites an article inserted in the license issued in *Portland General Electric Company*, Project No. 2030, 24 FPC 408, 417.

Then it was proposed that from the switching station, the line would run overhead in a southerly direction for some distance parallel to the railroad tracks, and then turn in a southeasterly direction to extend to and connect with Con Edison's transmission system at its Millwood Station. From the Millwood Station to Sprain Brook the line was to be on an existing right-of-way but would be reconstructed for the higher voltage. However, at the first session of the hearing, the exact route of the transmission line had not been determined upon. It was then said that Con Edison was looking for constructive ideas and would be willing to do everything economically reasonable to minimize damage of any kind.

Upon the resumption of hearing on May 4, 1964, the Company proposed that from the eastern terminus of the submarine cables the transmission lines extend, still underground, in a southerly direction parallel to the New York Central tracks for a distance of about one mile to Little Stony Point then turning to the northeast and continuing inland about three-fourths of a mile to Nelsonville at which point the Cornwall East Switching Station would be located. This change was prompted by the desire to preserve the scenic values of the eastern shore of the river and to some extent by the hope that Philipstown might cooperate in the improvement of the appearance of its water front in this area. At the switching station, the Applicant would go to overhead transmission lines which would follow contour lines in such a way that the transmission poles would be as inconspicuous as possible. The route then proposed, however, was to be subject to some variation when line surveys were made in order to accommodate local community and individual interests to the extent possible while giving consideration to operating and economic factors.

The substation facilities were to be reduced in height, and there is testimony to the effect that the switching station which the Applicant proposed to construct at Nelsonville would not be visible from the river, but screened by natural woodland.[7] Forest growths outside the switching station site which might be destroyed during construction would be replaced.

From the switching station in Nelsonville, the line would extend in a generally easterly direction crossing New York State Highway No. 301 and U.S. Highway No. 9 approximately one-fourth mile south of McKeel Corners, a distance of about 3½ miles to the Philipstown–Putnam Valley town boundary. Continuing in an easterly direction to a point near Duck Pond, the line would then turn almost due south substantially paralleling, and at a distance of about one-fourth mile to the east thereof, such town boundary.

Although the nature and the route of the transmission lines had not been made known, except in vague and general terms, Philipstown filed on February 24, 1964, a petition to intervene in the proceeding and permission to participate was granted by the Commission. The petition to intervene disclosed the opposition of Philipstown Citizens Association to the erection of overhead power transmission lines through the Town of Philipstown. Despite the change in Con Edison's plans by which the transmission lines would be underground from the terminus of the submarine cable for a distance of 1.6 miles and the switchyard would be constructed some distance from the river, Philipstown persists in its objection to overhead lines from Nelsonville to the Philipstown boundary. In this objection, Scenic Hudson joins Philipstown.

---

[7] As has been mentioned (*supra*, 481), this testimony was disputed by Scenic Hudson's witness Frazier. The personal experience of the writer leads him to the conclusion that when the leaves are on the trees the switching station at Nelsonville could not be seen from the parade grounds at West Point and that during the winter months when the trees are bare the superstructure and wires which might possibly be seen could not be distinguished from the leafless branches of trees.

The Town of Philipstown lies on the east side of the Hudson River and extends from a point opposite Storm King Mountain to a point opposite West Point, thus encompassing the area from the Duchess County line on the north to the Westchester County line on the south, a distance of some 8 miles. From west to east, from the intersection of Route 301 with the eastern boundary of Nelsonville directly to the easterly boundary of the Town of Philipstown is about 2½ miles. Philipstown constitutes a scenic area within which are more than a dozen "substantial mountains" and the terrain is, therefore, rugged and mountainous, with, outside the villages and hamlets, a rural scattering of homes. Except for the main arteries of travel (Route U.S. 9 and State Route 301), most of the roads, including the "Old Albany Post Road," are dirt.

The area of the town is about 44 square miles and within it are the Communities of Nelsonville, Cold Springs, Garrison and Continental Village. The assessed value on the town tax rolls is approximately $6 million. The construction of the transmission lines across Philipstown would produce annually tax revenues of about $250,000, but the town expects to collect a similar amount if the lines are put underground.

Over 90% of the land in the town is zoned residential. Cold Springs, Garrison, Graymoor Village, Lake Vallhalla and part of Continental Village are zoned residential with lots of a minimum area of 9,000 square feet. The remainder of Continental Village is zoned for ½ acre lots and the balance of the residential area of the town is zoned for one acre or more. Much of the land is held by estates, but about 25% is held by religious and other tax-free institutions. The testimony is that large areas are also used for recreational purposes and that the river front (south of Cold Springs) is extensively used for boating. A golf course has recently been constructed directly across the river from West Point.

The river front to a depth of 300 feet beginning at the western town boundary and extending to a point about halfway to Nelsonville is zoned for business and light industry. The remaining distance to Nelsonville, as well as a large area north thereof, the property owned by the New York Trap Rock Corporation, is zoned "industrial." The switching station and the overhead transmission lines to the point where they would cross Highway 301 would lie within the limits of the unincorporated Village of Nelsonville, which may or may not have zoning regulations. It should be noted, however, that Nelsonville has recorded no objection to the construction proposed within the village boundary. A strip of about 400 feet wide on either side of U.S. Route 9 throughout the length of the Town of Philipstown is zoned "business and light industrial." On March 6, 1964, between the sessions of the hearing held herein, the Town of Philipstown enacted an amendment to its zoning ordinance adding thereto the following provision:

> Notwithstanding the provisions set forth in this Article, no public utility, *not directly servicing the Town of Philipstown*, County of Putnam, shall install any lines for the transmission of electric power through said town unless the same is underground. [Emphasis supplied.]

Central Hudson Gas and Electric Corporation serves the Town of Philipstown directly and would thus, under this provision, appear to have the right to construct through the area aboveground transmission lines. On the other hand, Con Edison, while supplying Central Hudson with substantial amounts of energy and having a verbal understanding with Central Hudson to sell the latter a proportionate share (based upon their respective system loads) of the energy generated at the Cornwall Plant, under this ordinance, would be denied the right to do so.

Philipstown, in its opposition to the installation by Con Edison of overhead transmission lines through that town, offered the testimony of two witnesses.[8] One was the chief administrative official in the town government who testified, among other things, that there are now no high tower transmission lines bringing power into or carrying it through the town; that the net result of the construction of the proposed overhead power transmission lines through the town would be to lower the assessed valuation of the property therein and create a potential area of blight.[9] The other witness, a resident for some 18 years of the Village of Garrison, testified with respect to the beauty and historical preeminence of the Town of Philipstown and the adverse effect upon the beauty and the value of the property of the construction of overhead transmission lines through the area. There was, of course, no evidence to the contrary.

In search of a solution to the problem thus presented, several modifications of Con Edison's proposal with respect to transmission facilities were considered. The efficient and economical transmission of direct current elsewhere through underground cables produced evidence to the effect that the terminals which would be necessary for the conversion of the alternating current, which would be produced at the plant, to direct current and back again to alternating current would be prohibitive in cost. The suggestion that a submarine cable be laid along the bottom of the river to a point of interconnection with Con Edison's facilities near its Indian Point nuclear generating plant resulted in evidence that such a line would be not only prohibitive in cost but would also involve technical problems of doubtful solution. Overhead construction of the transmission line along the east side of the river, on or near the right-of-way of the New York Central Railroad to the vicinity of Indian Point, was explored, but this proposal was found to present equally serious technical and other problems.

Con Edison's proposal would require the construction of 23.4 miles of overhead transmission lines extending from the Cornwall East Switching Station to Millwood. The cost of such a line was estimated at $14,600,000. In response to the requests of the Staff and of Scenic Hudson, Con Edison estimated the cost of an underground line from the submarine cable terminus to Millwood as $99,850,000, $85,250,000 more than the cost of the line as proposed by Con Edison, and the cost of an underground line from the same point to a point on the Company's existing right-of-way east of Indian Point at $85,448,000, or $68,548,000 more than the cost of Con Edison's proposed line.

No evidence was submitted by anyone to refute the Company's estimates of cost set out above.[10] Nevertheless, the Staff in its brief, undertook to question the validity of the Company's estimates. But, alternative figures nowhere appear, and there is thus no basis in the record for a finding with respect to costs other than those submitted by the Company.

The evidence shows that the route proposed by Con Edison would encounter several areas which are intensely developed and which would not only be difficult to get through but would entail a number of angles and highway crossings which would add to the cost of line construction. The Staff made a study of the area and, as a result, proposed an alternative route. This route would extend in an easterly direction from the Cornwall East Switching Station at Nelsonville, a distance of about ten miles (about 3½ miles of which would be in the Town of Philipstown and the remainder in the Town of Putnam Valley), to a point near Carmel where it would intersect a right-of-way presently owned by Con Edison and which already is occupied by two of the latter's existing transmission lines extending from Pleasant Valley to Millwood. The Staff's evidence discloses that this route, except where it would cross the Peekskill Hollow Road, would traverse a relatively underdeveloped and a very sparsely settled area and would avoid highly developed areas which Con Edison's route would encounter. The Staff's proposal, assuming the conversion of Con Edison's existing 138 kilovolts transmission line on the Pleasant Valley-Millwood right-of-way would result, the Staff calculates, in a 10% reduction in costs. However, the method of getting from Carmel to Millwood, the Staff was willing to leave with the Company.

---

[8] Statements of position in opposition to such a proposal were made by others including Congressman Barry of that district.

[9] He seemed to feel that the assessed value of an underground line would be as great as that of an overhead line.

[10] Congressman Barry, in a "statement of position," employed some figures as representing "cost" but there was no testimony supporting them.

In its initial brief, Con Edison advanced a number of cogent reasons why the conversion of the line from Carmel to Millwood from 138 kilovolts to 345 kilovolts would not be possible and rejected that feature of the alternative route. But the Company recognized the merit of the Staff's proposal. In its reply brief, Con Edison announced that if the Commission finds the alternative route recommended by the Staff acceptable it would route the transmission line from the Cornwall East Switching Station to Millwood on a single tower, double circuit, 345 kilovolts, overhead line which would be constructed on a new 250 foot right-of-way, the stretch of the line from Carmel to Millwood being adjacent to and parallel with Con Edison's existing right-of-way between the latter points. Since the Staff appeared willing to leave to the Applicant the method of getting from the intersection of the line from the west with the Pleasant Valley-Millwood right-of-way, Con Edison's otherwise acceptance of the alternative route seems to accomplish the Staff's purpose.

There is little question, Philipstown's brief concedes, that the route suggested by the Staff travels through a sparsely settled area and also has the advantage of going north and northeast of the parklands which are traversed by Con Edison's proposed route. Personal observation has revealed that, constructed in accordance with the order hereto attached, aside from the crossing of U.S. Highway No. 9, an overhead transmission line along the alternative route would not have a serious impact upon the beauty and character of the area traversed by it. Philipstown still maintains, however, that lines following that route be underground through the town in accordance with the zoning ordinance quoted above.

No basis can be seen for discrimination in this respect between the Town of Philipstown and the Town of Putnam Valley. If Con Edison were required to place the alternative line underground through the former, the requirement should apply equally to the latter. Undoubtedly, overhead transmission lines as they traverse open, treeless areas present a distasteful picture to one in whose view they come. In wooded areas where the route of such lines crosses or lies within the view of persons on roads or highways, the ugliness of the facilities is emphasized by the swath which must be cleared for the right-of-way. It is no contribution to the problem to say that highways (such as the Storm King Highway around Storm King Mountain above the proposed plant) also cut ugly scars across the landscape.

Although attributing the necessity therefor to limited street space rather than aesthetic objectives, Con Edison has embarked upon a program of expansion of its underground (345 kilovolts) transmission lines. Altogether, 80 miles of such lines are planned as part of a backbone system most of which are scheduled for completion in 1965. It is believed that the time is not far distant when desirable public relations (sensitiveness to which Con Edison has commendably displayed in this proceeding) will require that transmission lines whether in narrow streets or in the wide open spaces be placed underground.

With respect to the laying of underground rather than overhead lines in this instance, Con Edison's objection is one of economics. The average cost per mile of underground line is estimated at $3,357,600, while the cost of overhead transmission lines is placed at $353,700. This is, of course, a substantial difference in cost and one which, if the 10 miles of line from Nelsonville to Carmel were placed underground, would add $30,000,000 to the cost of the project, raising a question as to its economic feasibility. In that context, there should be pointed out the statement of Con Edison's vice president to the effect that the Company would go no further with respect to increasing the underground portion of the transmission lines. In the light of the limited impact which pursuit of the alternative route would have upon the beauty and character of the area which it would traverse, it is not believed that the Applicant should be required to go further.

Economic Impact on the Village of Cornwall

As has been seen, the Village of Cornwall, an intervenor in this proceeding, contends that the licensing of the project would beneficially affect the public interest, more specifically, the economic, civic and cultural interests of the citizens of the village and the supervisor of the Town of Cornwall, the mayor of the Village of Cornwall, the trustee of that village, the chairman of the Village Water Committee, who is also a trustee of the village, testified in support of Con Edison's application. In addition, the mayor of the City of Newburgh and the representatives of six labor organizations in that city also testified in support of Con Edison's proposal.

The testimony shows that the project would have a great impact upon the economy of the Village of Cornwall and of the surrounding areas. The construction proposed would substantially increase tax revenues available to the village. In addition, it is anticipated that the construction and operation of the Cornwall project would contribute considerably to the improvement of the employment situation within the construction trades in Cornwall and the surrounding communities.

Once the project has been completed and placed in operation, Con Edison would become the largest single taxpayer within the Village of Cornwall. Based upon that municipality's present tax rate, the applicable state equalization ratios, and a rough estimate as to the cost of that portion of the project which would lie within the village boundaries, the village authorities anticipate that the annual taxes payable to the village by Con Edison would be as much as $500,000.

The mayor of the village testified that the increased taxes would permit the municipality to update and improve its municipal services such as its water and sewage services, its fire and police protection, street and sidewalk maintenance and collection, rubbish collection, recreation and other services of benefit to the community.

"We anticipate," the mayor continued, "that with these increased revenues we shall be able to construct a new village hall, library, village garage, parks, a recreational center, nature trails and municipal ski slopes." The mayor testified that without question the magnitude of the tax revenue accruing to the village from the Cornwall project should result in a reduction in the tax rate. This reduction, together with the many municipal services which would then be available, would result, the mayor thought, in the location in the area of additional industrial plants.

In addition, Con Edison will be subject to school taxes for the school district which includes both the Village and the Town of Cornwall. The construction of the pumped-storage project, the construction of the water system, the cost of which Con Edison has agreed to pay to the village, and the maintenance of the power plant will require skilled labor, a surplus of which is available. It is anticipated that the project plant would employ about 15 persons.

The supervisor of the Town of Cornwall, who is that municipality's chief executive officer, testified that the proposed project would increase the assessed value of town property two or three times the current level and that tax benefits would, consequently, accrue to the Village of Cornwall, the Town of Cornwall and the County of Orange, New York.

The mayor of the City of Newburgh testified that this city needs the proposed project "to bolster its depressed economy to provide employment to add a stimulus to * * * the rebirth. Newburgh," he said, "* * * must rebuild or die."

The representatives of the various labor organizations testified in substance that Newburgh is a chronically depressed area; that it has been 5 years since there was full employment in that city; that for the past 3 to 5 years about half of the labor membership has been unemployed; that for many years members of the represented unions, most of whom are skilled craftsmen, have been unemployed; and that the construction and operation of the proposed project would substantially improve the situation.

The evidence adduced by the Village of Cornwall was not contradicted.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record herein, the evidence adduced, and the briefs filed, it is found and concluded, in addition to the findings and conclusions heretofore set out, that:

(1) Consolidated Edison Company of New York, Inc., the Applicant in this proceeding, is a corporation organized and existing under and by virtue of the laws of the State of New York, and the Applicant has submitted satisfactory evidence of compliance with all applicable laws of that State to the extent necessary to effectuate the purposes of the application herein and of the license to be issued in this proceeding.

(2) The Applicant filed an application (and an amendment thereto) pursuant to the Federal Power Act for a license which would authorize the construction, operation and maintenance of a hydroelectric development which would be located on the Hudson River approximately 40 miles north of the City of New York, in part in the towns of Cornwall and Highlands, respectively, in Orange County, New York (known as the Cornwall site) and appurtenant project works including the necessary transmission facilities.

(3) The proposed Cornwall hydroelectric generating plant would be located in and along the Hudson River, a navigable water of the United States.

(4) There is no competing application on file with the Commission for a license for a hydroelectric development in the Cornwall reach of the Hudson River.

(5) The issuance of a license for the Cornwall project as hereafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(6) The installed capacity of the proposed project for the purpose of computing the capacity components of the administrative annual charges, as provided in Section 10(e) of the Federal Power Act, is 2,400,000 horsepower.

(7) The present and the future electric energy requirements of the Applicant's present and potential consumers require the construction and operation of the proposed project.

(8) The project proposed and as authorized in the order issued concurrently herewith is feasible from an engineering and from an economical standpoint and the operation thereof in the manner and for the purposes proposed by the Applicant as authorized herein, are in the public interest.

(9) The project as proposed, with an initial capability of 2,000,000 kilowatts, but with provision for future expansion to at least 3,000,000 kilowatts, will be best adapted to a comprehensive plan for improving and developing the Cornwall reach of the Hudson River for all purposes.

(10) The project works as proposed and as authorized in the order hereto attached will be safe and stable.

(11) The dike facing Clove Creek should be at least 3 feet lower than all of the other four dikes.

(12) There is no danger of seepage of any significant quantities of water out of the project reservoir, but the Applicant should install observation wells in the immediate vicinity of the project reservoir dikes to measure any seepage that does occur, sample the water in wells, ponds, and streams in the area before and after construction, and take appropriate measures to correct any conditions of significant seepage and, if necessary, respond in damages to parties who may be damaged thereby.

(13) Project power would be generated at 17,000 volts and transformed to 345,000 volts for transmission at the switchyard appurtenant to the powerhouse.

(14) The power would be transmitted across the Hudson River by four submarine cables approximately 4200 feet in length.

(15) Underground cables of essentially the same design would extend on the eastern shore of the stream from the end of the submarine cables a distance of 1.6 miles to the Cornwall East Switching Station at Nelsonville.

(16) The Cornwall East Switching Station at Nelsonville would consist of station terminals, pressure control equipment, breakers and associated switches, lightning arresters, metering devices and the terminal structures for the 345 kv overhead circuits.

(17) To transmit the power which would be generated at the Cornwall project, the Applicant should construct and operate as parts of a project within the meaning of Section 3(11) of the Federal Power Act, a double circuit 345 kv transmission line on a right-of-way 250 feet in width which would extend from the Cornwall East Switching Station at Nelsonville to a point on Applicant's existing Pleasant Valley-Millwood right-of-way.

(18) From Carmel to Millwood the power produced at the Cornwall project should be carried on a new 345 kilovolt, double-circuit line located on a new 250 foot right-of-way adjacent to Applicant's existing right-of-way from Carmel to Millwood.

(19) The route provided for in Finding (17) would cross relatively few highways, would traverse relatively undeveloped but wooded areas, and should follow a course along contours and avoid the crests of hills.

(20) The project upper reservoir would be located some 2 miles from, and west of, the Hudson River and the project powerhouse would be located along and immediately adjacent to the Hudson River in the Village of Cornwall, which is immediately north of the Hudson Highlands.

(21) The Hudson Highlands is an area of unusual natural beauty, great historical and artistic significance and of exceptional recreational opportunities. There are important historical remains and reconstructions at points along the Hudson River from Newburgh to West Point, but no such remains or reconstructions are in the immediate vicinity of the project works.

(22) The construction of the project upper reservoir would not adversely affect, to any significant extent, the natural beauty, the historical significance, or the recreational opportunities of the area in which it would be situate, but the recreational advantages of such area would be enhanced thereby.

(23) The construction of the project power plant would not adversely affect, to any significant extent, the natural beauty, the historical significance, or the recreational opportunities of the area in which such plant would be situate.

(24) The construction of the project transmission lines, as authorized herein, would not adversely affect, to any significant extent, the natural beauty, the historical significance, or the recreational oportunities of the area through which such transmission lines would be constructed.

(25) The view of the project power plant from the north would not be significantly impaired as the river in this area is wide and the structures would be low and colored to simulate the natural rock of the mountainside.

(26) The construction of the Cornwall East Switching Station at Nelsonville would not adversely affect the view from the parade grounds of the U.S. Military Academy at West Point, New York.

(27) The steps taken and proposed by the Applicant to preserve aesthetic, historical and recreational values, including the expenditure of substantial sums for submarine and underground cable, satisfy the public interest standard embodied in Section 10(a) of the Federal Power Act.

(28) The Applicant has assumed the responsibility for the expenditure of substantial sums in aid of the expansion of recreational resources and the preservation of scenic values.

(29) The water resources of the Village of Cornwall would be augmented and improved as a result of the project.

(30) As a result of the project, lands of the Palisades Interstate Park Commission in the watershed behind Storm King Mountain will be augmented by at least 150 acres.

(31) Subject to the terms and conditions hereinafter imposed, the proposed project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water power development and for other beneficial public uses, including recreational purposes.

(32) The Cornwall Project is desirable and justified in the public interest for the purpose of developing the Hudson River for the use or benefit of interstate or foreign commerce. If the licensee cannot acquire by contract or pledge the properties required for the Cornwall Project or the right to use or damage the lands or properties of others necessary to the construction, maintenance or operation of the Cornwall Project, including the project transmission line, it may acquire the same by the exercise of the right of eminent domain in the District Court of the United States for the Southern District of New York or in the courts of the State of New York.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission on appeal, or upon its own motion, as provided by the Commission's Rules of Practice and Procedure, that:

(A) This license is issued to Consolidated Edison Company of New York, Inc. (hereinafter referred to as the Licensee) under Section 4(e) of the Federal Power Act for a period of 50 years, effective as of the first day of the month in which acknowledgment of acceptance thereof is filed with the Commission by the Licensee for the construction, operation and maintenance of Project No. 2338, to be known as the Cornwall Pumped-Storage Development, on the Hudson River, a navigable water of the United States, in the village of Cornwall and Towns of Cornwall and Highlands, New York, and subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Proposed Project No. 2338 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States; the general location of such project area being shown and described by certain exhibits which formed part of the application for license, or amendment thereof, and which are designated and described as follows:

Hearing Exhibit No.	*Title*
15	Sections & Details (Exclusive of Typical Dike Detail).
18	General Map.
19	Site Plan.
20	Plan-Penstocks and Station.
21	Cross Section of Penstock and Station.
36	Proposed Dike Design (Dike 3 Facing Clove Creek).
38	Proposed Dike Crest, Dikes 1, 2, 4 and 5.
39	Proposed Dike Crest & Toe Detail—Dike 3.
22A	Cornwall East Switching Station, Modified Plan.
23A	Cornwall East Switching Station, Modified Elevation.
License Exhibit No.	
M	General Description of Equipment in three sheets.
J	Project Transmission, filed as part of the application for license on January 29, 1963.

(ii) The Cornwall project, with provisions for future enlargement will be a high head pumped-storage development located on the Hudson River approximately 40 miles north of New York City, in part in the Village of Cornwall and in part in the Towns of Cornwall and Highlands, and in Orange, Putnam and Westchester Counties, New York. A portion of the power tunnels and the penstock manifold, will occupy subsurface lands within the Palisades Interstate Park but the powerhouse will be so located that the surface facilities will be outside of the Park.

The project will consist of an upper reservoir, will utilize the Hudson River as a lower reservoir, a continuous water passage between the reservoirs, reversible pump-turbine and motor-generator units and other auxiliary facilities. The units would generally act as motor-pumps and use of off-peak energy furnished from non-project steam-electric or other facilities to pump water from the Hudson River to the upper reservoir. This cycle of operation would be repeated daily when the plant is in operation and advantage of week-end storage could also be utilized. The plant could also be kept idle or partially loaded, or spinning without water, as a power reserve for the applicant's and other loads in the area.

The *Upper Reservoir* would be created in the Hudson Highlands by forming a basin through the construction of five dikes, and would have available storage capacity of about 25,000 acre-feet between elevations 1160 and 1000 feet. The dikes would be constructed initially so that they could be raised in the future to provide for a maximum water surface elevation of 1210 feet.

The *Lower Reservoir* would be the natural Hudson River which, at Cornwall, is essentially an estuary of the Atlantic Ocean with semi-diurnal tides and widths in excess of a mile. The reservoir has unlimited storage capacity with water surface at about zero feet elevation.

The *Water Passage* initially, would consist of a concrete lined tunnel, through granite, 40 feet inside diameter and about 10,000 feet long, a concrete lined subsurface manifold, and eight steel lined penstocks. Water from the upper reservoir would be conveyed through the tunnel, thence through the manifold, and through the penstocks to the pumping-generating station.

The tunnel and penstocks will be designed initially to accommodate the future maximum water surface of 1210 feet. A future tunnel and penstocks could be added later to accommodate an additional installation of about 1,000,000 kilowatts.

The *Pumping-Generating* Station, initially, would consist of an outdoor-type station with eight pumping-generating units each rated at 225,000 kilowatts but capable of generating about 250,000 kilowatts (total capability of 2,000,000 kilowatts) under a gross head of about 1060 feet. When generating the station will discharge between about 25,000 and 27,000 cfs, and when pumping the station will draw between about 14,000 and 22,000 cfs. The transformation from motor-generator voltage of about 17 kilovolts to 345 kilovolts will be by transformers located at the station and delivered by submarine cables, with two spare pipes of adequate capacity alongside the pipes enclosing the cable, across the river and thence by underground cable to the switching station located on the east side of the Hudson River about ¾ mile from the river bank. The pumping-generating station could later be extended by adding 1,000,000 kilowatts of capability (total capability of 3,000,000 kilowatts).

The overhead *Transmission System* will commence at the switching station and will consist of a double circuit 345 kilovolt overhead transmission line extending about 24 miles to the Applicant's existing Millwood substation, and thence continuing south about 19 miles on an existing right-of-way to the new Sprain Brook substation. The new transmission line right-of-way 250 feet in width will be able to accommodate a second 345 kilovolt overhead transmission line.

(C) This license is also subject, to the extent applicable, to the terms and conditions set forth in Form L-4 (Revised June 1, 1964) entitled "Terms and Conditions of License for Unconstructed Project Affecting Navigable Waters of the United States" (32 FPC 839), which terms and conditions, designated as Articles 1 through 29, which are made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Licensee shall install a water measuring weir below the dike which extends between Mt. Misery and White Horse Mountain and shall measure at least once each week during the first year of operations the seepage flow and turbidity, if any. The measurements shall be recorded, plotted, and reported to the Commission each three months period for the first year of operations and thereafter when requested by the Commission or its authorized representative.

Article 31. The Licensee shall employ three qualified independent consultants for the purpose of making recommendations as to the measures to be taken with respect to the foundations of the upper reservoir dikes, the general reservoir area and the final design and specifications for the dikes and to advise Licensee as to other protective measures. A report and recommendations of the consultants shall be submitted for Commission consideration when the Licensee files revised Exhibits J and L for Commission approval. The Commission reserves the right to require the Licensee to take appropriate measures to assure the water tightness of the upper reservoir and other protective measures deemed necessary for the Project.

Article 32. The designs of the tunnel intake, and of the crest and toe of the dike facing Clove Creek, shall be based on hydraulic model studies and the crest of this dike shall be at least three feet lower in elevation than all of the other dikes.

Article 33. The Licensee shall submit in accordance with the Commission's rules and regulations revised Exhibits J and L and M showing the final designs of the project works and the Licensee shall not begin construction of the project structures until the Commission has approved such exhibits.

Article 34. The Licensee shall submit for Commission approval Exhibits F and K prepared in accordance with the Commission's Rules and Regulations, within two years from the effective date of this license.

Article 35. The Licensee shall locate the overhead transmission facilities, in a manner causing the least possible impact upon the interest of local communities and property owners, when possible traversing generally wooded and sparsely settled areas and where necessary to cross ridges following valleys and draws to the maximum extent possible, on a route extending easterly from the Cornwall East Switching Station at Nelsonville to a point in the Town of Carmel adjacent to Licensee's Pleasant Valley right-of-way and thence paralleling that right-of-way in a southerly direction to Millwood all on a new 250 foot right of way to be acquired. From Millwood to Sprain Brook the overhead transmission lines shall occupy an existing right-of-way of the Licensee.

Article 36. The Licensee shall within one year from the date of issuance of the license file with the Commission for approval plans of the transmission facilities of the project, including provision for the ultimate capacity of at least 3000 mw, and shall not begin construction of the initial transmission facilities until the Commission has approved such plans. Nothing in this article shall be construed to prohibit the Licensee from acquiring lands, rights-of-way and any other necessary permits and approval prior to the approval by the Commission of the final plans for the transmission facilities of the project, nor shall it be construed as approval by the Commission of any such acquisitions.

Article 37. The Licensee shall construct, maintain, and operate or arrange for the construction, maintenance, and operation of a fish screen or fish screening device on the pump intake as prescribed by the Commission.

Article 38. The Licensee shall continue to consult with the Palisades Interstate Park Commission and other appropriate federal, state and local agencies, and cooperate with such agencies with respect to means for the preservation of the natural beauty and improvement of the recreational opportunities of the project area and shall within one year from the date of issuance of the License, file with the Commission a statement of the steps which have been taken and which are planned for future consummation, toward the accomplishment thereof.

Article 39. The licensee shall construct, maintain and operate, such protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources, *provided* that such modifications shall be consistent with the primary purpose of the project, as may be prescribed hereafter by the Commission upon its own motion after notice and opportunity for hearing and upon a finding that such modifications are necessary and desirable and consistent with the provisions of the Act, and, *provided further* that, subsequent to the approval of the final design drawings prior to commencement of construction no modifications, of project structures in the interest of fish and wildlife resources which involve a change in the location, height, or main structure of a dike, or a major change in generating units, or a rearrangement or relocation of a power house, or major changes in the tailrace structure shall be required.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute

acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

EDWARD B. MARSH,
Presiding Examiner.

OPINION NO. 453

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-228

OPINION AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 9, 1965)[*]

Syllabus

1. **Reviewing evidence, Commission is convinced of Northern's justification in concluding that direct sale was required if Cooperative's plant was to be located in its service area. P. 503.**
2. **Commission *rejects* contention that certificate be granted only on condition that sale be made by Northern to one of its jurisdictional distribution customers for resale to industrial consumer. P. 503.**
3. **While not adverse to such condition (note 2, *supra*) in proper circumstances, Commission *notes* that here local distributor in area where plant will be located has withdrawn as party and expressed no further interest in sale, thus no purpose would be served by condition. P. 503.**
4. **Argument that under Northern's proposal jurisdictional customers who must operate under its tariff are precluded from competing for such sales on equal footing with pipeline supplier is without merit. P. 503.**
5. **Northern's 33.1 cent rate for direct sale to cooperative does not discriminate against its jurisdictional distributor customers. P. 504.**
6. **Purpose of minimum bill is to make certain seller recovers sufficient revenues from sales to provide adequate protection. P. 504.**
7. **Contracts providing for sale of gas at a unit price per Mcf customarily provide for an annual minimum as opposed to monthly minimum bill. PP. 504, 505.**
8. **Evidence shows that should Cooperative operate at only 75 percent load factor or pay only minimum annual bill, Northern would still recover an excess of cost of making sale, including a 6¼ percent rate of return. P. 505.**
9. **There is nothing unusual or objectionable in Northern's contract terms with Cooperative. P. 505.**
10. **Argument that contract with Cooperative, insofar as it grants moratorium respecting effective date of annual minimum bill, unjustly discriminates against Northern's jurisdictional customers, is *rejected;* Commission *notes* pipeline affords utility customers similar consideration in its IPS Rate Schedule. P. 505.**
11. **Section 157.7(c)(7)(ii) of Regulations is not applicable here—budget-type procedures are, in effect, an advance approval (without hearing) of all transactions which may take place under certificate; here hearing has been held with opportunity for participation by interested persons. P. 505.**
12. **There is an element of risk involved in every certificate proceeding since**

---

[*]Initial decision appears on p. 507.

economic feasibility of each proposal is dependent upon accuracy of market estimates. Here degree of risk is reasonable. P. 506.

13. Argument that method for allocating costs in rate cases may operate to reduce Cooperative's fair share of demand costs assumes inflexible application of allocation methods—should such fears materialize, Commission does not foreclose possibility of interveners raising these objections in any future rate case involving Northern. P. 506.

14. Commission *issues* certificate of public convenience and necessity under Section 7 of the Natural Gas Act.

F. Vinson Roach, J. C. Osborne, D. B. O'Brien, Justin R. Wolf, C. A. Case, Jr., and *Stanley Wanger* for Northern Natural Gas Company.

Jack F. Kinney for Iowa Public Service Company.

Charles V. Shannon and *Louis Flax* for Michigan Wisconsin Pipe Line Company.

John W. Scott and *Louis L. DaPra* for Minnesota Valley Natural Gas Company.

John F. Gaston for Iowa Electric Light & Power Company.

Mark W. Putney for Iowa Power and Light Company.

George C. Mastor for Minneapolis Gas Company.

Richard C. Steffey for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLACK, *Commissioner:*

This is a proceeding pursuant to Section 7 of the Natural Gas Act, on an application filed by Northern Natural Gas Company (Northern) for a certificate authorizing the construction and operation of facilities to enable Northern to transport and deliver to Consumers Cooperative Association (CCA)[1] 14,000 Mcf of gas per day on a firm basis for use in a proposed new anhydrous ammonia fertilizer plant near Fort Dodge, Iowa. Northern proposes to sell firm gas to CCA for a price of 33.1 cents per Mcf and interruptible gas, if any, at a price of 25.0 cents per Mcf. CCA would be obligated to take or pay for a volume of gas equal to 75 percent load factor purchases of the contract demand of 14,000 Mcf on an annual basis.

Following intervention by six of Northern's distributor customers[2] in opposition to certification, the matter was set for hearing before Presiding Examiner Lande. The Examiner, in his initial decision, issued November 9, 1964, would grant the instant application finding that all necessary conventional elements of the public convenience and necessity have been established by Northern; that the service proposed is required by the public convenience and necessity; and, that Northern's direct sale to CCA will not discriminate against Northern's jurisdictional distributor customers in any way. The matter is now before us on exceptions to the Examiner's decision filed by Iowa Electric Light & Power Company and Iowa Power and Light Company (Iowa Companies) and Minnesota Valley Natural Gas Company (Minn. Valley). Briefs opposing exceptions were filed by Northern and by the Commission staff.

---

[1] CCA is a farmer-owned and farmer-controlled business enterprise comprised of 1,799 member associations serving 400,000 farmers.

[2] Iowa Electric Light & Power Company, Iowa Power and Light Company, Iowa Public Service Company, Michigan Wisconsin Pipe Line Company, Minneapolis Gas Company, and Minnesota Valley Natural Gas Company.

The principal issue raised by interveners is the question of the Commission's policy regarding industrial sales by interstate pipelines in areas served by its distributor customers. Ancillary to this is the question whether, in the circumstances of this case, Northern's proposed rate schedule for CCA will be unduly discriminatory against Northern's distributor customers.

The Iowa Companies argue that the sale to CCA should be made by one of Northern's jurisdictional distributor customers which is ready, willing and able to make the sale in line with the Commission's holding in *Southern Natural Gas Company*, Docket No. G–19632, 25 FPC 925 (1961). Additionally, they contend that Northern's agreement with CCA is unduly preferential because it does not contain any minimum monthly billing provisions such as obligates each of Northern's jurisdictional distributor customers under Northern's FPC Gas Tariffs. Minn. Valley, excepting to the Examiner's decision in its entirety, principally maintains that the facts presented by the instant record compel the conclusion that Northern's application should be denied, or if a certificate is granted, it should be conditioned to provide that the sale and delivery of gas to CCA be made by the local distributor in the Fort Dodge area.

Upon review of the record in this proceeding, the parties briefs and their exceptions to the Examiner's decision, we are of the opinion that the Examiner's findings and conclusions are correct and, except as set forth below, further discussion of the Examiner's decision is unnecessary.

First we address ourselves to the issue whether Commission precedent requires that Northern refrain from making direct sales to CCA. In the *Southern* case, *supra*, we expressed the policy that, in general, the wholesale-supplier should not compete directly with its distributor customers. But, contrary to the argument of the intervening distributors here, the Commission in *Southern* expressly refrained from establishing a policy that industrial sales should always be made by a distributor. Rather, we concluded there that each such case should be resolved on its individual merits.

We must ask the question whether the sale here in issue would, or could have been made through any of Northern's distributor customers. The record shows that CCA was considering several sites, including some in areas not served by Northern. The lowest price offered CCA by Northern's distributor customers was 34.64 cents per Mcf. Iowa Power and Light Company, an intervener here, actively competed for the sale but proposed a southwestern Iowa location where lower priced gas was available from Natural Gas Pipeline Company of America (Natural), Northern's pipeline competitor. On review of the evidence we are convinced that Northern was justified in concluding that a direct sale was required if CCA's plant was to be located in its area of service.

The Iowa Companies and Minn. Valley contend that Northern's application should be granted only on the condition that the sale be made by Northern to one of its jurisdictional distribution customers for resale to the industrial consumer. We have not been adverse to such a condition in the proper circumstance. But, here the distributor responsible for the area of service in which CCA's plant will be located has withdrawn as a party to this case and expressed no further interest in the sale. We have no basis to assume that it is ready, willing and able to make this sale on terms likely to result in its consummation. Thus, no purpose would be served by such a condition in this proceeding.

The Iowa Companies state ". . . the vice in Northern's proposal under the proposed agreement is that, by its very nature, jurisdictional customers who must operate under the terms of Northern's FPC Gas Tariff are absolutely precluded from competing for such sales on an equal footing with their own pipeline supplier." This argument is without merit. We note, for instance Northern's filing on December 23, 1964, in Docket No. CP65-188 which involves an application to construct and operate facilities and to transport and sell 22,000 Mcf of gas per day to Iowa Public Service Company for resale to Terra Chemicals International, Inc., for use by the latter in a proposed 600-ton per day fertilizer plant to be located south of Sioux City, Iowa. Pursuant to contract, Iowa Public Service Company agrees to sell gas to Terra Chemicals for 33.1 cents per Mcf, the same price at which Northern proposes to sell gas to CCA in this proceeding.

Rate Discrimination

The Interveners except to the Examiner's refusal to find that Northern's proposed 33.1 cent rate to CCA is discriminatory against its jurisdictional distributor customers. They contend that Northern's Zone 2 demand and commodity rates for service in the Fort Dodge area on March 16, 1964, the date Northern contracted with CCA, were $3.092 and 22.64 cents per Mcf, respectively, or about 33.3 cents per Mcf when computed at CCA's contemplated 95% load factor operation. They contend that the Examiner incorrectly compared the price offered to CCA with the price charged a jurisdictional customer on the basis of Northern's rates which became effective July 27, 1964. We agree with the Examiner that Northern's 33.1 cent rate to CCA does not discriminate against its jurisdictional distributor customers.

In our order of January 2, 1964, in *Northern Natural Gas Company*, Docket No. RP64-15, 31 FPC 7, copies of which were served on Minn. Valley and the Iowa Companies, Northern was required to reduce the demand component of its rates for resale service by an annual amount of $1,500,000 if the Federal Corporate Income Tax rate should be reduced from 52 to 50%. Pursuant to this order, on February 28, 1964, Northern filed with the Commission a request to reduce its resale rates effective March 27, 1964, by 7.9 cents per Mcf in the demand component. Under Northern's reduced rates effective March 27, 1964, a jurisdictional customer could purchase gas from Northern in Zone 2 for 33.07 cents per Mcf at 95% load factor which is less than Northern's offer of 33.1 cents per Mcf to CCA. The Examiner was correct in finding that Northern's offer of 33.1 cents to CCA did not discriminate against Northern's jurisdictional customers in any way. Effective July 27, 1964, Northern's resale rates were again reduced, establishing Zone 2 demand and commodity components of $2,915 and 22.64 cents per Mcf, respectively, or 32.2 cents per Mcf at 95% load factor.

Minn. Valley and the Iowa Companies object to the Examiner's having found that the 75% load factor minimum annual bill in Northern's contract with CCA was non-discriminatory. Northern's jurisdictional customers are obligated to pay a minimum monthly bill consisting of the demand charge multiplied by the contract demand volume of gas provided for in the respective service agreements between Northern and its jurisdictional customers. They agree, however, that if a jurisdictional customer were purchasing a contract demand volume of 14,000 Mcf at 95% load factor, that such customers monthly minimum demand charge, when totaled on an annual basis, would be only $489,720 as compared to CCA's annual minimum bill obligation amounting to $1,268,558. The Iowa Companies and Minn. Valley contend that this is not a valid comparison of minimum bills because when CCA has paid its annual minimum bill of $1,268,558 it is entitled thereby to purchase 75% of its contract demand for an entire year without paying any additional charge, whereas the jurisdictional customer might have to pay its minimum bill of $489,720 without having taken a single cubic foot of gas.

The purpose of a minimum bill is to make certain that the seller recovers sufficient revenues from the sales to protect itself adequately. Contracts providing for the sale of gas at a unit price per Mcf customarily provide for an annual minimum bill as opposed to a monthly minimum bill. When gas is sold on a unit charge for each Mcf of gas the seller is not so much concerned about a monthly return as it is in making certain that sufficient revenues are recovered from the sale to reimburse the purchase gas costs and amortize its investment in the sales facilities. Traditionally, this Commission has certificated facilities for such sales where the sale will reimburse the pipeline's costs of providing service including an adequate return on its investment. The evidence shows that even if CCA should operate at only 75% load factor or should pay only the minimum annual bill, Northern would still recover $38,150 in excess of the cost of making the sale including a 6¼% rate of return. We agree with the Examiner that there is nothing unusual or objectionable in Northern's contract terms with CCA.

Minn. Valley argues that Northern's contract with CCA, insofar as it grants CCA a moratorium of 120 days before the annual minimum bill becomes effective, unjustly discriminates against Northern's jurisdictional customers. This argument must be rejected. Northern affords its distributor customers similar consideration in its Initial Period Service Rate Schedule. The IPS Rate Schedule not only permits the distributor to purchase gas for distribution to new communities between initial deliveries and October 27 of a given year without incurring any obligation to pay a minimum bill, but also provides that the gas may be purchased for no charge other than the payment of the commodity rate for each Mcf of gas delivered.

The Interveners, in their briefs on exceptions, argue that the Commission should consider Northern's application in light of Section 157.7(c)(7)(ii) of the Commission Regulations. This Section provides: "No gas shall be delivered to a direct industrial customer to replace or supplement gas purchased by such customer from a distributor or other natural gas company without the written consent of such distributor or natural gas company, or to serve a new direct industrial customer in the franchise or service area of the distributor without the express consent of the distributor." This section of the Regulations relates to budget-type applications proposing sales which will not amount to more than 100,000 Mcf annually or involve an investment of more than $300,000 in the case of any single customer. The budget-type procedures are, in effect, an advance approval of all transactions which may take place thereunder, without a hearing in each individual transaction. The Regulations, therefore, provide for screening out situations of possible difficulty or controversy. In this case a hearing has been held in which all interested persons have had an opportunity to participate.

The Iowa Companies object that they will be assessed in a future rate case with some of the costs to Northern of making the sale to CCA without any benefits accruing to them from such additional costs. They argue that the Commission's use of methods for allocating between costs assignable to demand and commodity components may operate to reduce CCA's fair share of the system demand costs. Since jurisdictional customers buy their peak requirements in order to satisfy the demands on their system during the coldest days of the year, they, of necessity, take most of the gas during the system peak period. In contrast, they say, under the contract herein proposed, CCA may not be on the line on these particular days or may be operating at lower load factor at such time, in which case the fixed costs allocated to the demand component would fall substantially upon jurisdictional customers.

The Examiner notes that if, contrary to the evidence of record, CCA should operate its plant at such a low load factor that Northern would receive no more than its minimum annual bill, *i.e.*, at a 75% load factor ". . . the costs allocated to the jurisdictional sales would be increased since the ration of jurisdictional sales to total sales would be greater due to the reduction of non-jurisdictional sales to CCA at a 75% load factor instead of 95% load factor. . . ." There is, of course, an element of risk involved in every certificate proceeding since the economic feasibility of each proposal is dependent upon the accuracy of the market estimates. Here the degree of risk is reasonable. The uncontroverted testimony shows that CCA's plant will operate at a 95% load factor on an annual basis. The Iowa Companies' objections and the Examiner's concern assumes an inflexible application of our allocation methods. We recently expressed pointed dissatisfaction with any such rigidity in allocation methods.[8] We do not, of course, foreclose the possibility of the interveners raising these objections in any future rate case involving Northern should their fears materialize. It is apparent that it would not be either just or reasonable to require Northern's jurisdictional customers and ultimately their consumers, to pay for a large part of facilities built to implement a private transaction between Northern and its directly served industrial customer.

All exceptions, arguments and requests not discussed or granted herein have been considered but are without substantial support in the record or a reasonable basis in law or are immaterial to the proper disposition of this proceeding and should be denied. The Presiding Examiner's initial decision issued herein on November 19, 1964, should, to the extent consistent with this Opinion and Order, be adopted by the Commission as of the date of issuance of the Opinion and Order, to constitute herewith our decision in this proceeding.

The Commission further finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280, 3 FPC 967.

(2) The facilities hereinbefore described, as more fully described in the application and exhibits in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

---

[8] *United Fuel Gas Company*, Docket No. G-20270; *Atlantic Seaboard Corporation*, Docket No. G-20272, Opinion No. 430, issued June 2, 1964, 31 FPC 1342; *Wisconsin Michigan Power Company*, Docket No. E-7026, Opinion No. 432, issued June 9, 1964, 31 FPC 1445, pp. 1453-1456.

(6) The evidence does not support the interveners' contentions that permitting Applicant to make the proposed direct sale through its Peoples Natural Gas Division, instead of requiring that the sale be made through one of Applicant's jurisdictional customers, will discriminate against the Applicant's jurisdictional customers in any way.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities and to deliver natural gas as hereinbefore described, all as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (1), (c) (2), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 1 year from the date on which this order issues.

(D) This certificate shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(E) The initial decision of the Presiding Examiner issued November 19, 1964, is, to the extent consistent with this Opinion, hereby adopted by the Commission as of the date of issuance of this Opinion, to constitute with this Opinion the Commission's decision in this proceeding.

(F) The exceptions filed to the Presiding Examiner's decision are denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION FOR CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY UNDER THE NATURAL GAS ACT

(Issued November 19, 1964)

LANDE, *Presiding Examiner:* This proceeding is about an application by the Northern Natural Gas Company, hereinafter referred to as the Applicant or Northern, for a certificate of public convenience and necessity under Section 7 of the Natural Gas Act.

In its application filed April 6, 1964, Applicant requested a certificate of public convenience and necessity authorizing it to construct and operate certain facilities in order that Applicant will be able to initiate a main-line direct firm sale of 14,000 Mcf of natural gas per day to The Consumers Cooperative Association (CCA) which proposes to construct a new 400-ton per day anhydrous ammonia fertilizer plant near Fort Dodge, Iowa. The facilities Applicant proposes to construct consist of: 27.3 miles of 30-inch main-line loops; a 4,000-horsepower compressor unit to be installed at its Beatrice, Nebraska, compressor station; replacement of the impellers and miscellaneous piping at its Tescott, Kansas, station; about one mile of 8-inch branch line, and a sales measuring station in the vicinity of CCA's proposed plant—all at an estimated cost of $4,188,900, including interest and overheads.

Under an agreement between Applicant and CCA dated March 16, 1964, Applicant will sell firm gas to CCA for a price of 33.1 cents per Mcf and interruptible gas, if any, for a price of 25 cents per Mcf. The contract provides that CCA is obligated to take or pay for a volume of gas equal to 75 percent load factor purchases of the contract demand of 14,000 Mcf on an annual basis. After the date of initial delivery the rate for firm service will increase or decrease in the same amount that Applicant's Zone 2 rate, when computed as a unit rate at 100 percent load factor, is permitted by the Federal Power Commission to increase or decrease.

CCA expects to operate its proposed plant so as to purchase gas at a 95 percent load factor, such estimate being based on CCA's experience in operating its plant at Hastings, Nebraska, where the processing is similar, and the gas usage is at 95 percent load factor.

CCA is a farmer-owned and farmer-controlled business which has the purpose of providing supplies to farmers so as to save them money. CCA has 1,799 member associations which in turn serve 400,000 farmers. CCA wants a fertilizer plant at Fort Dodge because a plant at Fort Dodge would be situated in the heart of a heavy corn-producing area.

Six of Applicant's customers filed timely petitions to intervene: Iowa Electric Light & Power Company, Iowa Power and Light Company, Iowa Public Service Company, Michigan Wisconsin Pipe Line Company, Minneapolis Gas Company, and Minnesota Valley Natural Gas Company. By order issued August 7, 1964, the Commission permitted the six aforesaid companies to intervene. The hearing commenced on September 1, 1964, and was completed in four days. After all interested parties had cross-examined Applicant's witnesses, except four geological witnesses as to whom cross-examination was waived, Iowa Public Service Company, one of the intervenors who appeared at the hearing in opposition to the granting of Northern's application, presented one witness who was cross-examined.

When all testimony and exhibits had been received in evidence, counsel for Applicant moved for omission of the intermediate decision procedure. The Examiner denied the motion in view of opposition voiced by counsel for four of the intervenors. The Examiner then fixed the dates for filing of briefs, as follows: Northern's initial brief by September 18, 1964; Intervenors' and Staff's briefs by October 16, 1964; and Applicant's reply brief by October 26, 1964.

The Issues

The principal issues in this proceeding are:

1. Whether Commission precedent requires that industrial sales should always be made by a distributor.
2. Whether Applicant met the traditional tests as to the public convenience and necessity, *i.e.*, adequacy of gas supply, markets, engineering, financing, and economic feasibility, and
3. Whether granting Northern's application to serve CCA directly will be unduly discriminatory to the intervenors, namely, the jurisdictional customers of Northern.

Precedents for Industrial Sales

The distribution company intervenors claim that Commission precedent requires that Northern refrain from selling directly to CCA—a large industrial customer. Intervenors contend that if Northern is permitted to offer potential large volume industrial customers lower prices and better conditions of service than are available to jurisdictional customers, Northern will be able to capture all the future customers in that class. Local distributors cannot sell at prices cheaper than they buy at and cannot furnish conditions of service which are not available to them. Intervenors further argue that the factual situation in this proceeding is comparable to the one involved in the *Southern Natural Gas Company*, Docket No. G-19632, 25 FPC 925 (1961), where the pipeline, Southern, made a Section 7 application to serve two proposed large industrial customers. Although the local distributing company, South Atlantic, was willing to serve the customers, it concurred in and endorsed the sale being made by the pipeline. The Presiding Examiner's decision, which was affirmed by the Commission, denied the pipeline's application to serve the two industrial customers but granted its request for a certificate to construct additional compressor facilities on the condition that the local distributing company render the service to the two industrial customers. Intervenors argue that this sets a precedent that industrial sales must be made by a distributor.

The above is rebutted by Applicant, who argues convincingly that there is no Commission precedent establishing a policy that industrial sales should always be made by a distributor. Applicant points out that in *Southern Natural Gas Company*, 25 FPC 925, 927, the Commission expressly refrained from setting such a precedent by stating:

> * * * In other words, [the Examiner] has not declared, nor do we declare, that the distributor in all cases, rather than the interstate pipeline, should be permitted to make proposed industrial sales. We shall continue to consider each case on the merits as it arises and make the determinations which are commensurate with the facts and law applicable thereto.

Applicant cites specific instances where the Commission has approved the supplier's application without ordering that the proposed industrial sale be made by the local distributor rather than by the pipeline itself. For example, in *American Louisiana Pipe Line Company*, 30 FPC 698, 702–706, the Commission authorized Panhandle Eastern Pipe Line Company to sell gas to the B. F. Goodrich Co. near Ft. Wayne, Indiana, instead of requiring such sale to be made by the local distributor.

After reviewing the *Southern Natural* case and the other cases cited by the Intervenors, and rebutted by the Applicant, the Examiner concurs with the position taken by Staff Counsel, namely, that there is no binding Commission precedent that an industrial sale which cannot be made economically through a distributor needs be lost to a competing pipeline. Each application should be decided on the merits of each case as it arises.

At the threshold, the evidence raises the question whether Northern would have lost the CCA business had it left the matter to the disposition of the distributors. Northern submits that if it had not seized the initiative, the pertinent industrial service would have eventually gone to its competitor, the Natural Gas Pipeline Company of America. Applicant's policy witness Sampson testified that Northern will compete with another pipeline company which is trying to obtain sales in Northern's market territory and it will similarly compete with a distributor which tries to obtain industrial sales in its market territory by purchasing gas from another pipeline company. However, he assures us that Northern will not compete with its own distributors for sales which can be made from the distribution facilities of such customers. It becomes important to ascertain whether at the time Northern entered into agreement with CCA, the pipeline was justified in assuming that the terms of the contract were essential to the retention of this industrial customer.

The Examiner does not agree with the contentions of Minnesota Valley Natural Gas Company and other intervenors, that CCA already having plants in Nebraska and Kansas had no other place to go to but Fort Dodge in order to serve the great concentration of cooperatives in the area north of Des Moines. The threat of competition to Northern must be evaluated on the basis of the competitive considerations as they appeared reasonable in light of the evidence known to Applicant in March 1964. Intervenors theorize that Fort Dodge was the only location seriously considered by CCA and that therefore it was unnecessary and improper for Northern to negotiate a direct sales contract with CCA to assure the plant's location adjacent to Northern's pipeline system. The Examiner does not accept this theory in view of the uncontradicted and competent testimony of witness Zurbuchen, CCA's experienced general manager, who clearly stated on the record that if CCA had not been able to obtain the price and terms contained in its contract with Northern, the plant would have been located not near Fort Dodge but elsewhere. The Examiner does not accept Iowa Power and Light Company's calculations of "freight savings", because they are based on the erroneous assumption that CCA will not sell fertilizer west and south of Fort Dodge. The record shows that Fort Dodge was selected as the plant site just before the March 16, 1964, contract was signed. CCA's letter to Northern of January 15, 1964, showed interest in southwest Iowa as well as the Fort Dodge-Boone areas. CCA's rejection of Northern's January 18, 1964, offer of 34 cents per Mcf for firm gas justified Northern's conclusion that Natural Gas Pipeline Company of America and its distributors were offering a lower price to CCA in southwest Iowa and southeastern Nebraska with which distributors supplied by Northern could not profitably compete. The record shows further that Iowa Power and Light Company continued active negotiations with CCA until the end of February 1964 for the sale of gas to be supplied from the Natural Gas Pipeline system at a southwest Iowa location. Gas could be purchased more cheaply in southwestern Iowa than in the central part of the State. For example, Iowa Power and Light Company offered to sell gas to CCA for 31.27 cents per Mcf and American Gas Company offered gas to CCA for 30.99 cents per Mcf. These companies would have purchased this low-priced gas for sale to CCA from Natural Gas Pipeline Company of America instead of from Northern. Natural itself offered to sell gas directly to CCA for a price of only 30 cents per Mcf, but that offer was made for a plant to be located in Nebraska and CCA was not interested in locating a plant in Nebraska since it already has a plant at Hastings, Nebraska, which is capable of serving that market territory. Since Natural Gas Pipeline has a lower rate structure than Northern, the Examiner finds that Northern was justified in concluding during March 1964 that a direct sale was required if CCA's plant were to be located in the area served by Northern's pipeline system. It is futile to speculate on the basis of hindsight just what CCA would have actually done if Northern had not lowered its initial price for firm gas to 33.1 cents per Mcf and to 25 cents per Mcf for interruptible gas. The Examiner finds that on the basis of the known facts at the time the parties entered into the agreement Northern acted reasonably and its steps to preserve its share of the market were fully justified.

The Conventional Requirements

Northern has met the statutory requirements of Section 7(e), as well as all of the administrative tests of public convenience and necessity enunciated by the Commission.

Applicant has demonstrated that it has an adequate gas supply. Its competent witnesses testified that Northern's dedicated gas reserves as of December 31, 1963, are properly estimated to be 12.250 trillion cubic feet and will enable Northern to meet the peak day and average day requirements of its expanded system markets, including the proposed deliveries to CCA, for a period of 12 years without any deficiency. All parties agreed to excuse Northern's gas supply witnesses without cross-examination. The design and estimated cost of Northern's proposed facilities were fully supported by the testimony of competent engineering witnesses. The reasonableness of Northern's design and estimated cost of facilities are not controverted. Northern's market is, of course, assured by the contract dated March 16, 1964, providing for the purchase by CCA of 14,000 Mcf per day of natural gas on a firm basis. CCA's desire to build an anhydrous fertilizer plant near Fort Dodge and the estimated consumption of natural gas in that plant on a monthly and annual basis are fully supported by the testimony of witness Sampson and witness Zurbuchen, experienced with similar type fertilizer plants owned and operated by CCA and other cooperative associations. Additionally, Northern's ability to finance and the economic feasibility of its project have been amply proven. The evidence compares revenues from the estimated sales of firm gas at 95 percent load factor with all costs properly attributable to making the proposed deliveries to CCA, including return computed at 6.25 percent and an appropriate allowance for Federal and State income taxes. Exhibit 7 demonstrates that revenues will exceed the cost of service, including return, by $210,000. Exhibit 11 demonstrates that if firm sales were estimated at 75 percent load factor, revenues would exceed the cost of service, including return, by $38,150. This evidence was never seriously controverted. No question was raised by any party concerning Northern's ability to pay for the construction of the proposed facilities from cash on hand generated from operations.

The Examiner is satisfied that Northern's proposed sale of gas to CCA and the construction and operation of the new fertilizer plant at Fort Dodge will have a beneficial effect on the general public in the north half of the State of Iowa by providing a much needed stimulant to the economic and industrial development of that region, which has suffered in recent years by an out-migration of population due to lack of industry. The plant output will be sold to Iowa and southern Minnesota farmers through local farm cooperatives at a considerable savings both to CCA and the farmers themselves.

Accordingly, but for the alleged discrimination issue discussed below, it is clear in this record that within the purview of Section 7(e) Northern has demonstrated that its project will serve the public interest.

No Rate Discrimination

Intervenors contend that Northern unduly discriminates against its jurisdictional customers in favor of CCA. The Minneapolis Gas Company highlighted these arguments as follows:

> Price—At the time the contract with CCA was executed, the price of 33.1¢ per Mcf of firm gas was substantially less than jurisdictional customers in Zone 2 would pay under Northern's FPC Gas Tariff at load factors from 75% to 95%. Under Northern's present rates, the 33.1¢ per Mcf price is less than Zone 2 jurisdictional customers would pay at load factors from 75% to 90%.
>
> CCA is required to pay only a 75% minimum annual bill—Northern's jurisdictional customers must pay a 100% minimum monthly bill. During the first four months of service Northern waived the minimum bill provision

for CCA—the minimum bill provision for jurisdictional customers from the date of initial service.

Delivery pressure—Northern guaranteed CCA delivery pressure of not less than 500 pounds psig. Under Northern's Tariff, jurisdictional customers are guaranteed only 50 pounds psig.

Odorant—Northern agreed to odorize the gas for CCA without charge. A jurisdictional customer must add odorant at its own expense.

At the outset it is noted that the record shows that when the contract was executed Northern anticipated filing a further rate reduction under its FPC Gas Tariff as a result of settlement conferences concerning reductions in rates charged Northern by certain of its producer suppliers. Certain of the customer intervenors participated in those settlement conferences and had the same knowledge as Northern. This rate reduction was filed August 5, 1964, and on September 8, 1964, by letter order issued by the Secretary of the Commission, was made effective as of July 27, 1964. This rate filing reduces the unit cost of gas purchased at 95 percent load factor by a jurisdictional customer in Rate Zone 2 to 32.73 cents per Mcf. CCA receives no benefit from this rate reduction. Article V of the CCA contract provides that the initial price of 33.1 cents per Mcf will be adjusted *after* actual deliveries to CCA are commenced in accordance with any future upward or downward adjustment in Northern's Zone 2 jurisdictional rate. This provision assures that the price paid by CCA will always be higher than the unit cost of gas to a jurisdictional customer of Northern located in Rate Zone 2 purchasing at 95 percent load factor.

Moreover, CCA is obligated under the contract to pay a minimum annual bill which is much higher than the minimum annual bill obligation of a jurisdictional customer in Rate Zone 2. Northern's CD–2 rate schedule obligates the jurisdictional customer to pay only the demand charge. Accordingly, the minimum annual bill of a jurisdictional customer in Rate Zone 2 purchasing 14,000 Mcf of contract demand under the rates effective July 27, 1964, is $489,720, as compared to a minimum bill obligation of CCA of $1,268,558. It should be noted that CCA is not required to take any volume of gas under its contract with Northern. Likewise, a jurisdictional customer is not required to take any volume of gas under Northern's CD rate schedules. Iowa Public Service Company (IPS) presented evidence showing that a jurisdictional customer would lose $88,840 annually if it tried to sell gas to CCA for 33.1 cents per Mcf on the assumption that the plant would operate at 95 percent load factor and instead the plant should actually operate at such a low load factor that only the minimum annual 75 percent load factor revenue could be recovered. On the other hand, Northern's counsel showed on cross-examination of IPS' witness that if Northern should sell 14,000 Mcf to a jurisdictional customer and that customer purchase its gas at only 60 percent load factor, Northern would lose $88,558 annually in making sales at 60 percent load factor as compared with selling 14,000 Mcf to CCA under its 75 percent load factor minimum annual bill.

These comparisons, depending upon the load factors assumed, have been tried in an attempt to support arguments to the effect that the sale to CCA discriminates against Northern's jurisdictional customers. However, any meaningful comparisons between the rate which jurisdictional customers must pay and the rate that Northern is proposing to charge CCA must be made on an assumption that the plant will operate at the 95 percent load factor assumed by Northern and completely supported by the testimony and exhibits in this proceeding. Sundry computations comparing CCA's unit cost at various assumed load factors with the unit cost of gas purchased at various load factors by a jurisdictional customer in Rate Zone 2 are not helpful in this proceeding. This record properly supports a 95 percent load factor purchase by CCA and any other assumption is merely conjectural.

The Examiner concurs with Staff Counsel's views that since there has been no showing that Northern's offer of a price of 33.1 cents to CCA is discriminatory, Minneapolis Gas Company's reliance on *El Paso Natural Gas Company*, 22 FPC 900, 903, and *Michigan Consolidated Gas Co.* v. *Panhandle Eastern Pipe Line Co.*, 173 F. 2d 784, 789, is not helpful because it is unnecessary for the Commission to require that a nonexistent discrimination be removed.

The intervenors contended on cross-examination that there was no showing that Northern's Peoples Division could economically make the sale to CCA because Peoples Division will be increasing its contract demand purchases from Northern by 14,000 Mcf in order to make the sale to CCA. Peoples Division is Northern's distribution arm and not a separate corporate entity. Northern's policy witness could think of no incremental costs which Peoples Division would incur as a result of making the sale to CCA. Therefore it is redundant for Northern to make a showing of economic feasibility on behalf of Peoples Division.

The Examiner finds that Northern has shown that the sale will return up to $210,670 of excess incremental revenues over incremental cost of service, including allowance for a 6¼ percent rate of return. Because of the competitive nature of the sale, no jurisdictional customer would be able to make a greater than marginal showing of economic feasibility.

Staff Counsel properly points out that, in *Michigan Wisconsin Pipe Line Company*, Opinion No. 441, Docket No. CP64–109, issued September 14, 1964, 32 FPC 737, at p. 740, the Commission held that a showing of economic feasibility by a distributor was sufficient to justify a sale of boiler fuel from the distributor's viewpoint even though the proof consisted of demonstrating fuel savings to the distributor in the form of intercompany profits passed on exclusively to the distributor's electric customers. Under this same reasoning, Northern properly demonstrated that the sale is economically feasible to Peoples Division which is a part of that same corporate entity.

The next contention which intervenors make is that they have a minimum monthly bill consisting of the demand charge whereas CCA has a 75 percent load factor minimum annual bill. They argue that it is discriminatory for Northern to grant CCA a minimum *annual* bill while requiring of them a minimum *monthly* bill. However, as Northern's policy witness pointed out convincingly, a monthly minimum bill is required in a contract where the customer is obligated to pay both a demand and a commodity rate because the seller wishes to clarify the fact that the purchaser is at least obligated to pay a minimum bill consisting of the monthly demand charge. On the other hand, when the contract requires only a unit or commodity rate to be paid per Mcf delivered, the seller is interested in making sure that it receives a minimum amount of revenue so that the negotiations between the parties become a contest in which the seller wants a high annual minimum bill and the purchaser wants a low annual minimum bill.

The Examiner agrees with the Staff that since Northern's sales to its jurisdictional customers are made under a demand and commodity rate, there is nothing unusual about the fact that the jurisdictional customers are required to pay a monthly minimum bill consisting of the demand charge whereas CCA is required to pay a minimum annual bill equivalent to 75 percent load factor purchases of its contract demand. Notice should also be taken of the fact that CCA's minimum annual bill is 2.6 times greater than the jurisdictional customers' minimum monthly bills when the latter are considered on an annual basis. Furthermore, since Northern obtained a minimum annual bill from CCA which is sufficient to recover excess incremental revenues over the incremental costs associated with making the sale, including allowance for a rate of return, there appears to be no basis in the record for the intervenors' claim that the 75 percent annual minimum bill in CCA's contract with Northern discriminates against them in any way.

Throughout the hearing the intervenors contended that CCA might purchase large volumes of interruptible gas from Northern. CCA's witness explained that CCA desired to have a provision in its contract with Northern permitting it to purchase interruptible gas if its requirements should exceed its contract demand of 14,000 Mcf on any day when Northern had interruptible gas available. Despite the fact that Northern's engineering witness stated that the 8-inch branch line to be constructed to serve CCA's plant will have sufficient capacity to deliver up to 7,000 Mcf per day of interruptible gas if it should be available on the main line, CCA's witness stated emphatically that it would be impossible for the plant to use 7,000 Mcf per day of interruptible gas and he estimated that the plant could not be expected to use more than 1,500 Mcf per day of interruptible gas. This testimony is consistent with the experience of Allied Chemical and Dye Corporation's fertilizer plant. Furthermore, witnesses for both CCA and Northern assured the intervenors that if any interruptible volumes were to be purchased by CCA, such purchases would be excluded from the firm purchases which are to be used in calculating CCA's minimum annual bill. There is no merit to intervenors' claim that Northern will sell large volumes of interruptible gas to CCA or that the small volumes of interruptible gas which might be sold to CCA would in any way be detrimental to the intervenors.

Intervenors argue that Northern's guarantee to CCA of a delivery pressure of 500 pounds is discriminatory. However, the record shows that Northern offered to supply Iowa-Illinois Gas and Electric Company 500 pounds pressure near Northern's mainline for resale to CCA and that similar arrangements would be made available to other utility customers at delivery points near Northern's mainline for the purpose of delivering additional contract demand for resale to an industrial customer.

Intervenors complain that the minimum bill provision under the CCA contract is not operative in the first one hundred twenty days after sales are commenced. They allege that distributors are not offered a similar moratorium by Northern under its tariff. However, under Northern's tariff any distributor initiating service to a new community prior to October 27 in any given year is temporarily relieved of a minimum bill obligation. Between the date service to such community is commenced and October 27 of that year, the distributor may purchase gas for such community under Northern's IPS rate schedules which contain no minimum bill obligation. The IPS rate schedules are frequently used by many distributors including some of the intervenors in this case.

Intervenors argue that they will be assessed in a future rate case with some of the costs to Northern of making the sale to CCA without any benefits accruing to them from such additional costs. As was properly pointed out by Northern's policy witness, if there should be a rate proceeding in which costs are allocated between jurisdictional and nonjurisdictional sales, the sales to CCA would be included in the nonjurisdictional portion of Northern's business and Northern's stockholders would have to recover the total costs associated with such nonjurisdictional sales. Since the incremental facilities would have been constructed to make the sales to CCA and would have been used for that purpose, the jurisdictional customers would not be assessed any additional costs in a prospective rate case if Northern is permitted to serve CCA as proposed in this proceeding.

It is only on the assumption that CCA operates at some load factor lower than 95 percent that Northern's jurisdictional customers could theoretically be adversely affected in any way by Northern's being authorized to serve CCA. If, contrary to the evidence of record, it is assumed that CCA will operate at such a low load factor that the only revenues recoverable from the sale are those related to CCA's 75 percent minimum annual bill, then in a rate case, there would be included nonjurisdictional business representing 75 percent load factor operation of the plant. Thus, the costs allocated to the jurisdictional customers would be increased since the ratio of jurisdictional sales to total sales would be greater due to the reduction of nonjurisdictional sales to CCA at 75 percent load factor instead of 95 percent load factor.

Of course, if the sale were being made by a jurisdictional customer and CAA's plant returned only revenues equal to 75 percent load factor operation, the nonjurisdictional business would be required to pay a slightly higher proportion of total costs because of the failure of CCA to purchase at 95 percent load factor. There would also be a slight adverse effect on all jurisdictional customers as a result of the 75 percent load factor volume of sales. Failure of any sale to materialize as estimated will result in fewer units of sales over which to distribute system costs and these units must be paid for by both jurisdictional and nonjurisdictional business in the ratio that each type of business relates to total sales. However, we are now dealing with a possibility which, on the basis of the evidence, is not likely to occur. We can never be certain of future estimates. In administrative proceedings we frequently face such possibilities. To put it in the language of Staff Counsel, certificate proceedings are always plagued by the fact that the economic feasibility of every proposal depends on the accuracy with which the markets have been estimated. There are very few cases in which the markets have been estimated with any more conviction that they will materialize than was demonstrated by the witnesses in this proceeding. Furthermore, as heretofore pointed out, the experience by both Northern and CCA shows that fertilizer plants, such as that proposed for construction by CCA, have consistently operated at 95 percent load factor. Consequently, there is no reason to prejudge this proposed sale by making an assumption that in any subsequent rate case there will be included in the nonjurisdictional sales any volumes of gas less than the 4,854,500 Mcf associated with sales to CCA at 95 percent load factor.

Intervenors complain that Northern agreed to odorize the gas for CCA without charge, while jurisdictional customers must add odorant at their own expense. The Examiner finds that the Natural Gas Act does not require that gas be sold to different classes of customers at the same price and upon identical conditions. CCA's requirements are those of a direct industrial user and are different from those of a gas distributor.

In summary, the record is clear that if Northern had not offered the price and terms set forth in the contract dated March 16, 1964, the low bidders for the CCA load would have been Natural Gas Pipeline Company of America, or distributors served from Natural's system, and the obvious benefits from the CCA sale, which will now accrue to Northern and the distributors and customers served from its pipeline, would have been lost. This outweighs by far the allegations about the possible, but not probable, very minor disadvantage to jurisdictional customers should certain business forecasts fail to materialize. Applicant had demonstrated that the proposed sales will be beneficial to the Fort Dodge area as well as to Northern's system operations. However, the local distributor concerned has not shown that it is likely to be aggrieved in any way if Northern makes the proposed sale to CCA. Since service to CCA's proposed plant would require Northern to construct the same facilities to serve the plant through its Peoples Division as would be required to serve the plant through one of Northern's jurisdictional customers, no question regarding the construction of duplicative pipeline facilities is involved in this proceeding.

CONCLUSION

Northern's application should be granted because Applicant has demonstrated that the public convenience and necessity require that Northern be authorized to construct and operate the facilities requested in its application in order to render firm service to CCA's proposed plant. The evidence fails to support the intervenors' contentions that permitting Northern to make a direct sale through its Peoples Division, instead of requiring that the sale be made through one of Northern's jurisdictional customers, will discriminate against the jurisdictional customers in any way. Consistent with the *Southern Natural* case *supra*, this type of application is to be decided on the merits of each case as it arises. The "merits" heretofore recited fully justify the granting of Northern's application to serve CCA as proposed in this proceeding.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence adduced and the briefs filed, it has been found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280, 3 FPC 967.

(2) The facilities hereinbefore described, as more fully described in the application and exhibits in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) The evidence does not support the intervenors' contentions that permitting Applicant to make the proposed direct sale through its Peoples Natural Gas Division, instead of requiring that the sale be made through one of Applicant's jurisdictional customers, will discriminate against the Applicant's jurisdictional customers in any way.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission on appeal or upon its own motion, as provided by its Rules of Practice and Procedure that:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities and to deliver natural gas as hereinbefore described, all as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 1 year from the date on which this order issues.

(D) This certificate shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of resale customers desiring to acquire additional gas to meet any future increases in their requirements.

ALLEN C. LANDE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-51; SUN OIL COMPANY, DOCKET NO. G-8592

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING CERTIFICATE

(Issued March 9, 1965)

On August 20, 1964, Southern Natural Gas Company (Applicant) filed in Docket No. CP65-51, an application, as supplemented on October 7, 1964, and amended on December 21, 1964, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to United Gas Pipe Line Company (United) from additional acreage assigned to Applicant in the Maxie-Pistol Ridge Field, Forrest County, Mississippi by Sun Oil Company (Sun) and Marathon Oil Company (Marathon), all as more fully set forth in the application.

Specifically, Applicant proposes to sell to United Gas Pipe Line Company natural gas produced from leases assigned to Applicant in the Maxie-Pistol Ridge Field, Forrest County, Mississippi by Sun and Marathon. Sales will be made under Applicant's rate schedule F-1, at 20 cents per Mcf at 15.025 psia.

Sun has not requested amendment of its certificate authorization in Docket No. G-8592 to delete the subject acreage assigned to Applicant.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and amendment thereto, and exhibits, submitted in support of the authorization sought, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation, having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The proposed sale of natural gas in interstate commerce, to United Gas Pipe Line Company, as hereinbefore described and as more fully described in the application, supplement, and amendment thereto and exhibits filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed sale of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) The certificate of public convenience and necessity heretofore issued in Docket No. G-8592 should be amended as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Southern Natural Gas Company, in this proceeding authorizing the sale of natural gas in interstate commerce, as hereinbefore described, all as more fully described in the application supplement and amendment thereto and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The certificate of public convenience and necessity heretofore issued to Sun Oil Company in Docket No. G-8592 is amended to delete therefrom any acreage assigned to Applicant that is the subject of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP65-144; EL PASO NATURAL GAS COMPANY, DOCKET NO. CP65-153

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF FILINGS

(Issued March 10, 1965)

On November 20, 1964, Colorado Interstate Gas Company (Colorado), filed in Docket No. CP65-144 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas, on an interruptible basis, to El Paso Natural Gas Company (El Paso) and the construction and operation of pipeline facilities in Moore County, Texas, all as more fully set forth in the application on file with the Commission.

On November 24, 1964, El Paso Natural Gas Company filed in Docket No. CP65-153 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities to implement the purchase and receipt of natural gas from Colorado, all as more fully set forth in the application on file with the Commission.

Colorado proposes to sell to El Paso, on an interruptible basis at a price of 18 cents per Mcf, such volumes of natural gas as El Paso desires to purchase up to 100,000 Mcf per day as Colorado might have available from time to time, pursuant to an agreement of the parties dated November 9, 1964, which terminates March 1, 1968.

The delivery of gas will be made at two points on Colorado's Fourway-to-Kit Carson 20-inch main line in Moore County, Texas. Gas will be delivered at an existing interconnection of Colorado's line and Northern Natural Gas Company's (Northern Natural) 30-inch line and a proposed delivery point at the intersection of Colorado's line and El Paso's 18-inch Panoma line (Fourway delivery point).

Colorado will construct and operate a meter station at the Fourway delivery point and operate an existing station at the Northern Natural delivery point. Colorado will deliver gas to Northern Natural for El Paso's account as part of El Paso's authorized daily exchange volume with Northern Natural. El Paso seeks authority to construct and operate a tap and side-gate valve at the Fourway point and to include volumes of gas delivered to Northern Natural as a part of its existing exchange agreement.

The estimated cost of Colorado's facilities is $45,596, and will be financed with current funds. The estimated cost of El Paso's facilities is $2,300, and will be financed with current funds.

Service under the proposals is to be rendered in accordance with Colorado's Rate Schedule X-22 and El Paso's revision to its exchange agreement with Northern Natural. Rate Schedule X-22 constitutes the interruptible sales agreement between Colorado and El Paso, and El Paso's filing reflects the extension of the termination date for deliveries at the Northern Natural delivery point.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on March 4, 1965, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the applications and exhibits, submitted in support of the authorization sought herein and upon consideration of the record,

The Commission finds:

(1) Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued June 5, 1945, in Docket No. G–294 (4 FPC 936).

(2) El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(3) The proposed construction and operation of facilities and sale and delivery of natural gas, as hereinbefore described and as more fully described in the applications and exhibits in these proceedings, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities and sale and delivery of natural gas are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Colorado and El Paso are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) Colorado's related Rate Schedule X–22 to its FPC Gas Tariff, Second Revised Volume No. 2 and El Paso's Tenth Revised Sheet No. 13 to its FPC Gas Tariff, Third Revised Volume No. 2 should be accepted for filing to become effective upon the date of issuance of this order.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued to Colorado and El Paso, authorizing the construction and operation of facilities and the sale and delivery of natural gas, as hereinbefore described and as more fully described in the applications in these proceedings, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Colorado's and El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) Colorado's related Rate Schedule X–22 to its FPC Gas Tariff, Second Revised Volume No. 2 and El Paso's Tenth Revised Sheet No. 13 to its FPC Gas Tariff, Third Revised Volume No. 2, are hereby accepted for filing to become effective upon the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PUBLIC SERVICE COMPANY OF NEW HAMPSHIRE, PROJECT NO. 2470

ORDER ISSUING PRELIMINARY PERMIT

(Issued March 10, 1965)

Application was filed on May 1, 1964 by Public Service Company of New Hampshire (Applicant) of Manchester, New Hampshire, for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2470, known as the Pontook Project, to be located on the Androscoggin River in the Towns of Berlin, Milan, Dummer, Cambridge, and Errol, all in the County of Coos, New Hampshire.

The Secretary of the Army and the Chief of Engineers have advised that the Corps of Engineers is making a study of the Androscoggin River for flood control and allied purposes and that a report thereon is nearly completed. It may recommend a multiple-purpose project, including flood control, hydroelectric power, and recreation, at the Pontook site on the Androscoggin. The Corps has no objection to the issuance of the preliminary permit herein applied for.

The Department of the Interior, in commenting on the application, while suggesting that the Commission may wish to defer action on the application pending completion of the aforementioned study by the Corps of Engineers, recommended for inclusion in any preliminary permit for the project a condition for the protection, conservation and enhancement of fish and wildlife resources, and to mitigate and compensate for the loss of or damage to such resources.

The Department of Health, Education, and Welfare, in commenting on the application, offered no objection to the granting of a preliminary permit for the project but suggested that water pollution control be given careful consideration in any study of the proposed project.

We do not believe the considerations which lead the Commission to deny the application of the Georgia Power Company for a preliminary permit for Project No. 2303 (27 FPC 663) are applicable here. In the *Georgia Power* case the Corps of Engineers had issued a report of a comprehensive study of the river recommending Federal construction of the project. The applicant had not shown to our satisfaction that it proposed to make any significant studies not already accomplished by the Corps, and we accordingly concluded that ". . . The studies which the preliminary permit are designed to encourage have thus already been made at public expense and should therefore be available on equal basis to any party who may wish to develop these water resources in the event Federal development is not authorized." In the present case, the Corps of Engineers has not completed its report. Moreover, the applicant has indicated that it intends to make studies in addition to those being made by the Corps of Engineers because the project it is investigating involves different sites, a larger installation of capacity and different market considerations. See Opinion No. 454 issued today in Georgia Power Company, Project No. 2413 (33 FPC 934).

Applicant requests a preliminary permit for a period of 36 months. It appears appropriate, however, that the period of the permit should be 24 months as hereinafter provided.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license over non-Federal parties while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit. A license would authorize construction of a project.

The issuance of a preliminary permit for Project No. 2470 as hereinafter provided shall not in any way be construed as precluding the exercise of Commission action contemplated under the provisions of Section 7(b) of the Federal Power Act.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of New Hampshire.

(2) Public notice of the filing of the application has been given as required by the Act. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

The Commission orders:

(A) This preliminary permit is hereby issued to Public Service Company of New Hampshire (Permittee) of Manchester, New Hampshire, for a period of 24 months, effective as of March 1, 1965, for the sole purpose of maintaining priority of application for license for Project No. 2470, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2470 as presently proposed prior to permittee's studies would cousist of: (1) a dam tentatively 3,600 feet long and 125 feet high, with crest elevation of 1,225 feet, made up of concrete powerhouse and spillway sections, earth embankments and a log sluice; (2) a reservoir with pool elevation not yet determined; (3) a powerhouse having an ultimate installed capacity of 262,500 kw; (4) a re-regulating reservoir formed by a dam about eight miles downstream with provision for appropriate water control gates and a log sluice.

(C) This permit is also subject to the terms and conditions set forth in Form P-1 entitled "Terms and Conditions of Preliminary Permit" (16 FPC 1303–1305) which terms and conditions, designated as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six month period, from the effective date of the preliminary permit, to the Regional Engineer, Federal Power Commission, New York, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period, and of the work contemplated under the preliminary permit for the ensuing period.

Article 10. The Permittee shall, during the period of the project planning, consult with and cooperate with the New Hampshire Fish and Game Department, the U.S. Fish and Wildlife Service, the Department of Health, Education, and Welfare, and the Corps of Engineers, in order that due consideration may be given to the interest of these agencies in the preservation of the resources of the area which may be affected by the proposed project.

Article 11. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

Article 12. The Permittee shall, during the early period of project planning, consult with Federal, State, and local agencies having an interest in outdoor recreation on project lands and waters, in the preparation of an "Exhibit R" required for the filing of an application for license pursuant to Section 4.41 of the Commission's regulations under the Federal Power Act.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the Permittee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED FUEL GAS COMPANY, DOCKET NO. CP63–305

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SUPERSEDING SERVICE AGREEMENT FOR FILING

(Issued March 10, 1965)

On December 28, 1964, United Fuel Gas Company (Applicant) filed in Docket No. CP63–305 an application to amend the Commission's order issued August 10, 1964, 32 FPC 573, in said docket to delete therefrom certain volumetric limitations imposed upon the sale of natural gas, authorized by said order, to Union Oil and Gas, Inc. (Union), all as more fully set forth in the application to amend in this proceeding.

The order of August 10, 1964, among other things, authorized Applicant to construct and operate certain facilities and to sell natural gas to Union. Ordering paragraph (B) of said order provided that the volumes of gas sold to Union should not exceed 500 Mcf per day. Ordering paragraph (F) of said order required Applicant to file a service agreement fixing a contract demand of 500 Mcf per day for Union.

Applicant states that Union seeks an increase in the contract demand from 500 Mcf per day to 600 Mcf per day in order to have an adequate supply of gas to serve its customers during the 1964–65 winter heating season; therefore, Applicant requests herein that the volumetric limitations imposed by ordering paragraphs (B) and (F) be deleted from the order of August 10, 1964.

Concurrently with the filing of the instant application to amend, Applicant tendered for filing a superseding service agreement with Union dated December 1, 1964, which agreement reflects an increase in the contract demand from 500 Mcf per day to 600 Mcf per day. Applicant requests that said agreement be accepted for filing to become effective December 1, 1964.

Concurrently with the filing of the instant application to amend, Applicant tendered for filing a superseding service agreement with Union dated December 1, 1964, which agreement reflects an increase in the contract demand from 500 Mcf per day to 600 Mcf per day. Applicant requests that said agreement be accepted for filing to become effective December 1, 1964.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 14, 1965 (30 F.R. 508). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and public convenience and necessity require that the Commission's order issued August 10, 1964, in Docket No. CP63-305 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued August 10, 1964, in Docket No. CP63-305 be and the same is hereby amended to delete therefrom the volumetric limitations contained in ordering paragraphs (B) and (F) of said order, all as hereinbefore described and as set forth in the application to amend.

(B) The superseding service agreement between Applicant and Union, dated December 1, 1964, is hereby accepted for filing to become effective December 1, 1964.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-183

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued March 10, 1965)

On December 21, 1964, United Gas Pipe Line Company (Applicant), 1525 Fairfield Avenue, Shreveport, Louisiana, filed in Docket No. CP65-183 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain facilities, all as more fully set forth in the application on file with the Commission.

Applicant seeks permission and approval to abandon and remove facilities now being used to serve Livon Gas Company (Livon), Shelby County Texas, consisting of an orifice meter station located where Applicant's 22-inch line crosses the line of Livon in Shelby County, Texas.

The application states that the abandonment is sought due to the fact that Livon now has a sufficient gas supply of its own to fulfill its needs. The application further states that by letter agreement dated November 13, 1964, Applicant and Livon have agreed to a termination of the service involved.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1943, in Docket No. G-232 (3 FPC 863).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation

and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully set forth in the application in this proceeding, are hereby granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities authorized in paragraph (A) above within ten days of such abandonment.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-199

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued March 10, 1965)

On December 31, 1964, United Gas Pipe Line Company (Applicant), Shreveport, Louisiana, filed in Docket No. CP65-199 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon and remove one 2-inch positive meter station located on Applicant's 16-inch Latex-Fort Worth line in Van Zandt County, Texas, all as more fully set forth in the application.

The facility sought to be abandoned was formerly used in providing service to Pan American Petroleum Corporation (Pan American). However, by letter dated November 18, 1964, Applicant and Pan American agreed to the cancellation of their contract to be effective December 1, 1964. This termination results from the fact that Pan American now obtains its fuel requirements from its nearby Edgewood Gas Processing Plant.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 4, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facility to be abandoned, as hereinbefore described, as more fully described in the application in this proceeding, is subject to the jurisdiction of the Commission and abandonment of such facility is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facility is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of said abandonment within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WISCONSIN MICHIGAN POWER COMPANY, PROJECT NO. 2357

ORDER ISSUING LICENSE (MAJOR)

(Issued March 10, 1965)*

Application was filed on April 8, 1963, by Wisconsin Michigan Power Company (Applicant) of Appleton, Wisconsin, for a license under Section 4(e) of the Federal Power Act (Act) for constructed major Project No. 2357, known as the White Rapids Project, located on the Menominee River in Menominee County, Michigan, and Marinette County, Wisconsin, about 7 miles southeast of Amburg, Wisconsin. No lands of the United States are affected by the project.

Construction of the project was commenced in 1926 and it was placed in operation in 1927. Applicant acquired the project in December, 1937. No significant alterations or additions to the project have been made since its construction.

An application for a preliminary permit for this project was filed by White Rapids Paper Co., of Oshkosh, Wisconsin, and the Commission, by its action on June 23, 1922, declined to take jurisdiction (Second Annual Report of the Federal Power Commission, p. 151). In a proceeding on a declaration of intention filed by Applicant on April 27, 1940 under Section 23(b) of the Federal Power Act, the Commission found and determined in its Opinion No. 94, dated July 27, 1943, that the Menominee River and its tributary the Michigamme River, are navigable waters of the United States (3 FPC 449). The 1943 decision reversed the 1922 decision, with respect to the navigability of the stretch of the Menominee River involved.

This application was filed as a result of our April 25, 1962 decision concerning the Androscoggin River in which we invited the owners of all unlicensed projects to file voluntary applications for licenses (27 FPC 830). The application involves the same site and the same project as was proposed in the 1922 application, referred to above, which was rejected by the Commission for lack of jurisdiction. In the circumstances of this case we are making the effective date of this license current with its issuance.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license for the project certain conditions in the interests of fish and wildlife and recreation.

The Department of Health, Education, and Welfare has advised that no pollution or mosquito problems will be created or intensified by the operation of the project.

While Applicant filed an Exhibit R, it has not filed a recreational use plan appropriate for approval. By Article 31 herein we are requiring Applicant to cooperate with Federal, State and local agencies in the interest of recreation in connection with the use of project lands and waters by the public and to keep us advised at intervals with respect to the results.

---

*Order issued May 3, 1965, granting rehearing for further consideration, unreported. License modified on rehearing by order issued May 4, 1966, 35 FPC 687.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 10,700 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable.

(6) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project, except to the extent that they pertain to substation and transmission facilities.[1]

The Commission orders:

(A) This license is hereby issued to Wisconsin Michigan Power Company (Licensee) under Section 4(e) of the Federal Power Act (Act) for a period effective as of January 1, 1965 and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2357, located on the Menominee River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) The White Rapids Project No. 2357 consists of:

(i) all lands constituting the project area and included by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as:

Exhibit J: (FPC No. 2357-1) "General Map."

Exhibit K: (FPC No. 2357-2) "Project Boundary and Transmission Line Location" (Exhibit K shows but Exhibit M excludes the transmission line extending southwardly from Applicant's Chalk Hill Plant, Project No. 2394).

---

[1] We are hereinafter reserving the right to determine at a later date what transmission facilities, if any, should be included in this license as a part of the project works.

(ii) project works consisting of: (1) a dam, 1,236 feet long and about 50 feet in maximum height—a composite structure made up of a concrete gravity channel segment 378 feet long flanked by clay-gravel embankment extending (at a top elevation of 723 feet m.s.l.) to the Michigan and Wisconsin banks of the river, the concrete segment consisting of a spillway section 246 feet long (controlled by 9 tainter gates 24 feet wide and 15.5 feet high) adjoining an integral-intake-powerhouse-substructure section 132 feet long; (2) a reservoir of about 465 acres; (3) a fish chute; (4) a reinforced concrete, steel, and brick powerhouse 35.5 feet wide and containing two vertical shaft generators of 3,000 kw capacity driven by Francis turbines of 4,385 horsepower capacity (under a head of 29 feet) and one generator of 2,000 kw capacity driven by a Francis turbine of 3,100 horsepower capacity; and (5) appurtenant electrical and mechanical facilities; the location, nature and character of which are delineated on the following described exhibits, except to the extent they pertain to substation and transmission facilities:

Exhibit L: Sheet 1 (FPC No. 2357-3) "General Layout"; Sheet 2 (FPC No. 2357-4) "Cross Section of Plant"; Sheet 4 (FPC No. 2357-6) "Plant Floor and Sectional Plans"; Sheet 5 (FPC No. 2357-7) "Plant Elevations"; Sheet 6 (FPC No. 2357-8) "Tainter Gate and Spillway Details"; Sheet 7 (FPC No. 2357-9) "Abutment Walls."

Exhibit M: Three typewritten pages, "General Description of Project and Equipment", except substation and transmission facilities.

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, except substation and transmission facilities, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-3 (Revised August 1, 1964), entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States," (32 FPC 1114) which terms and conditions, designated as Articles 1 through 29, are attached and made a part hereof, except Article 25 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 30. The Commission reserves the right to determine at a later date what transmission facilities shall be included in this license as a part of the project.

Article 31. Licensee shall cooperate with Federal, State and local agencies in the development and maintenance of access areas and roads and such other facilities necessary for full recreational utilization by the public of project lands and waters, consistent with the terms of the license and the operation of the project. At the end of six years from the date of issuance of this license and every sixth year thereafter, Licensee shall advise the Commission of the results of cooperation with such local agencies and of further recreation development at the project.

Article 32. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge as determined by the Commission in accordance with the provisions of its regulations, in effect from time to time. The authorized installed capacity for such purpose is 10,700 horsepower.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license to the extent indicated therein.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Commissioner Ross *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

POND'S LODGE, INC., PROJECT NO. 1413

ORDER ISSUING LICENSE (MINOR)

(Issued March 11, 1965)

Application was filed on July 17, 1964, by Pond's Lodge, Inc. (Applicant), of Island Park, Idaho, for a minor license under the Federal Power Act (Act) for Project No. 1413, located on Buffalo River, tributary to Henry's Fork of Snake River, in Fremont County, Idaho, and affecting lands of the United States within the Targhee National Forest.

The project has been under Commission licenses since October 31, 1939, the last license having expired on October 31, 1964.

The Forest Service, Department of Agriculture, in reporting on the application, offered no objection to the issuance of a new license, subject to the terms and conditions set forth in Form L–7, December 15, 1953, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States" (17 FPC 486).

The Department of Health, Education, and Welfare has advised that the project does not presently have any adverse effects on water supply, water pollution control, or vector control, and none is anticipated.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Idaho, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(3) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) The issuance of a license for the project will not interfere or be inconsistent with the purposes for which the Targhee National Forest was created or acquired.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The amount of annual charges, based on 268 hp., to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, and for recompensing it for the use, occupancy and enjoyment of its lands by the project (8.92 acres plus a 100-foot wide transmission line right-of-way about 1.23 miles long) is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Act:

Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves, 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

(8) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued under Sections 4(e) and 10(i) of the Act to Pond's Lodge, Inc. (Licensee) of Island Park, Idaho, for a period of 10 years, effective as of November 1, 1964, for the continued operation and maintenance of Project No. 1413, located on Buffalo River, tributary to Henry's Fork of Snake River, in Fremont County, Idaho, and affecting lands of the United States within the Targhee National Forest, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 1413 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined.

(ii) constructed project works consisting of a rock-fill dam about 10 feet high and about 140 feet long with a concrete spillway and fishway, a wooden powerhouse containing a turbine connected to a generator with a capacity of 250 kva; a transmission line, and appurtenant electrical facilities;

the said lands and project works being more specifically shown and described by certain exhibits which are designated and described as follows:

Exhibit K: (FPC No. 1413–3) A general and detail map and plans in one sheet entitled, "Map of Buffalo Power Project", signed by Chas. Pond on June 6, 1940, and revised in accordance with applicant's letters filed April 18 and June 5, 1951.

Exhibit M: A typewritten document in one sheet entitled, "General descriptions and general specifications of mechanical, electrical, and transmission equipment," signed on November 18, 1939, by Charles Pond.

(C) This license is also subject to the terms and conditions set forth in Form L–7, December 15, 1953, entitled "Terms and Conditions of License for Minor Projects Affecting Lands of the United States" (17 FPC 486), which terms and conditions, designated as Articles 1 through 14, are attached hereto and made a part hereof; and subject to the following special condition set forth herein as an additional article:

Article 15: The Licensee shall pay to the United States the following annual charges, effective November 1, 1964:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $13.40.

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, excluding those used only for transmission line right-of-way, $10.70.

(iii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands used for transmission line right-of-way only $9.84.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 1390

ORDER PERMITTING WITHDRAWAL OF APPLICATION FOR AMENDMENT OF LICENSE

(Issued March 11, 1965)

Application was filed on May 27, 1963 by California Electric Power Company (California Electric) licensee for Project No. 1390, for amendment of the license for the project, known as Mill Creek Project, situated on Mill Creek near Mono Lake, in Mono County, California.

The application sought authorization to construct as part of the project a 55 kv transmission loop line which would bypass a section of a 55 kv transmission line which had become subject to frequent outages. The licensee proposed to eliminate service interruptions by means of the loop line and a short branch 55 kv line connecting the loop line to the bypassed section of the main transmission line at Mono Substation. The loop line was to become part of the primary transmission line. The existing transmission line poles in the section of line to be bypassed support, in addition to the main circuit, a lower voltage circuit supplying electric service to local customers which is subject to outages.

By its order issued October 1, 1963, in Docket No. E-7106, 30 FPC 942, the Commission authorized the sale by California Electric Power Company and the acquisition and merger on consolidation by Southern California Edison Company (Southern California) of certain facilities of California Electric, including the project works comprising Project No. 1390, effective as of December 31, 1963. By its order issued October 1, 1963, the Commission approved the transfer of the license for Project No. 1390, among other licenses, from California Electric to Southern California. By letter dated October 5, 1964, Southern California advised that it had decided not to construct the transmission loop line and requested that the application be cancelled.

The Commission orders:

Permission to withdraw the aforesaid application for amendment of the license for Project No. 1390, is hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP65-189

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 11, 1965)

On December 28, 1964, United Gas Pipe Line Company (Applicant) filed in Docket No. CP65-189 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities for the sale of natural gas, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate approximately 1.4 miles of 4½-inch pipe line, extending from Applicant's 20-inch Sterlington-Sarepta line to the Town of Homer Municipal Power Plant (Homer Plant), and an orifice meter station and appurtenant facilities, all located in Claiborne Parish, Louisiana, for the purpose of supplying the natural gas requirements of the Homer Plant.

The estimated volumes of natural gas involved to meet the annual and maximum day requirements of the Homer Plant for the first three years of operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	195,025	207,325	219,625
Maximum day (Mcf)	1,400	1,500	1,600

The estimated cost of Applicant's proposed construction is $41,230, and will be financed out of current working funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The proposed construction and operation of facilities and delivery of natural gas by Applicant to the Homer Plant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and delivery of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should not entitle the Homer Plant to whom firm deliveries are authorized hereinafter to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation and delivery of natural gas to the Homer Plant as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid regulations within 120 days of the date on which this order issues.

(D) This certificate shall not entitle the Homer Plant to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

THE JUPITER CORPORATION, DOCKET NO. RI63-212; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-58

ORDER DENYING AND REJECTING PETITIONS FOR RECONSIDERATION AND DENYING MOTIONS FOR CONTINUANCE

(Issued March 12, 1965)

On February 24, 1965, The Jupiter Corporation (Jupiter) filed with the Commission a telegram containing combined motions and petitions seeking relief from our order issued February 18, 1965, 33 FPC 295, and other relief.[1] In that order we deferred action on Jupiter's Petition for Declaratory Order and Motion to Dismiss Proceedings in Docket No. RI63-212, denied its Alternative Motion to Sever and Stay Proceedings and its Motion for Oral Argument and provided Jupiter an additional period of 30 days from the date of our order within which to prepare and serve its evidence in Docket No. RI63-212. In our order issued February 26, 1965, we provided that the 30-day additional period be measured from February 23, 1965, rather than from February 18, 1965. We accordingly extended the time within which Jupiter shall file and serve its evidence to March 25, 1965. On March 10, 1965, Jupiter filed still another motion for continuance.

In its filing Jupiter contends that a period of 30 days is insufficient to prepare its evidence because of the necessity of employing outside consultants and other outside personnel and therefore moves that the date for filing its evidence be set as April 26, 1965, but in no event earlier than April 12, 1965. Jupiter also petitions for rehearing of the Commission's order denying its alternative motion to sever and stay proceedings and for rehearing of the Commission's purported denial of Jupiter's Petition for Declaratory Order and Motion to Dismiss Proceedings in Docket No. RI63-212. As to the latter petition for declaratory order, Jupiter contends that denial thereof occurred, pursuant to the Commission's Rules of Practice and Procedure and ruling principles of law, by reason of the Commission's refusal to rule upon such petition and motion within 30 days after the filing thereof.

Jupiter also moves that the due date for the filing and serving of Jupiter's evidence be continued generally and be reset thereafter, if necessary, 60, and no less than 45 days after the last of the Commission's rulings on a number of matters allegedly still open before the Commission. Jupiter submits this request as an alternative to be considered only if the Commission denies its abovementioned motion for extension of time beyond the 30-day period in our order issued February 18, 1965.

Although Jupiter's filing purports to be a petition for rehearing, under Section 19 of the Natural Gas Act, of our alleged denial of its petition for declaratory order and its alternative motion to sever and stay proceedings, we do not so consider it as it is not directed to any final or appealable decision or order of the Commission. Section 1.34 of our Rules, which implements Section 19 of the Act, provides that an application for rehearing may be filed only after issuance of a final decision or order by the Commission. We will therefore treat Jupiter's petitions as petitions for reconsideration of actions or purported actions by the Commission which are not subject to court review under Section 19(b) of the Act.

---

[1] Jupiter filed and served reproduced copies of its telegraphic filing on February 26, 1965.

In support of its petition for reconsideration of our denial of its Alternative Motion to Sever and Stay Proceedings Jupiter contends that rate evidence should not be considered in the consolidated proceedings on the grounds that it will produce confusion of standards and coercive effect upon Jupiter's presentation, especially when the Commission's jurisdiction over Jupiter has not been established. Jupiter further argues that even assuming the Commission's position that rate evidence regarding Jupiter is needed in Docket No. CP65–58 is correct,[2] which Jupiter disputes, such evidence could and should be considered in the certificate case alone.

Jupiter's contention in this petition is substantially the same as it made in its alternative motion originally. The application in Docket No. CP65–58 pursuant to which Tennessee Gas Transmission Company seeks a certificate of public convenience and necessity to lease the properties of Jupiter is a unique type of application as recognized by Jupiter in one of its early pleadings. Public interest requires that before such certificate can be issued the reasonableness of lease price be determined. Thus, we determined in our order issued February 18, 1965, that no useful purpose would be served by severing the rate investigation from the certificate proceeding. In denying that motion in our order issued February 18, 1965, we fully considered Jupiter's arguments contained therein. Jupiter has presented no new facts or principles of law in its petition for reconsideration which we have not fully considered before or which upon present consideration warrant reversal of our order denying Jupiter's motion to sever and stay proceedings, or the granting of that motion.

Jupiter's contention that we have in effect denied its Petition for Declaratory Order and Motion to Dismiss the Proceedings in Docket No. RI63–212 by reason of what Jupiter claims to be a refusal by the Commission to rule upon such petition and motion within 30 days after the filing thereof is without merit. There is no provision in our Rules of Practice and Procedure that a petition for declaratory order shall be deemed denied by the Commission's failure to act thereon within 30 days after the filing thereof. Moreover the rules provide a period of 30 days for the filing of answers to all petitions, with the exception of petitions to intervene (Section 1.9(a)), and do not specify any time period within which the Commission must act on a petition for declaratory order. Nor are we aware of any "ruling principles of law" which are applicable here and which Jupiter says effectuated a denial of its petition. We have not by order denied Jupiter's petition nor can such petition be deemed to have been denied by passage of time. We have merely deferred action on it until all evidence on this issue adduced on the record was before us for consideration. There is no order of the Commission to which Jupiter's petition for rehearing of a denial of its petition for declaratory order could be directed. Jupiter's petition for rehearing is thus not properly filed under our Rules of Practice and Procedure or under any provision of the Natural Gas Act, and should be rejected.

There is no justification for granting Jupiter any further continuance of the date for filing and serving its evidence. Jupiter was originally required to file and serve its evidence on or before December 23, 1964. We have already granted several continuances totalling three months and Jupiter is presently required to file and serve its evidence on or before March 25, 1965. While Jupiter admits it did not start to prepare its evidence until the end of February, it has been under a requirement to do so at least since December 8, 1964, and the Commission staff has filed its evidence.[3]

---

[2] The Commission took this position in *The Jupiter Corporation* v. *Federal Power Commission*, USDC, N.D. of Illinois, No. 65C–228.

[3] In fact, by order issued October 30, 1964, Jupiter was directed to and required to serve its prepared testimony and exhibits on or before December 23, 1964.

In our order issued February 12, 1965, 33 FPC 204, denying Jupiter's motion for continuance, filed February 8, 1965, we stated:

> The continued delays in this § 5(a) proceeding, instituted more than two years ago are entirely unwarranted and contrary to the public interest. Jupiter's motion is no more than an effort to prescribe the order of Commission proceedings. This we cannot permit. Jupiter, if it so chooses, may refrain from filing any evidence in the proceeding. However, it cannot by its fiat unreasonably delay a proceeding which under the statute can only provide prospective relief to consumers. Accordingly, it is our conclusion that these cases proceed in accordance with the schedule set forth in our order issued February 3, 1965, and be continued as expeditiously as possible to decision by the presiding examiner on the complete record made therein.

It is appropriate here to point out that a portion of the transportation charges which Jupiter is collecting from its Rollover Field operations could eventually be determined unlawful in Docket No. RI63–212. Any charges which Jupiter collects in excess of the charge the Commission determines to be lawful in Docket No. RI63–212 are not subject to refund. The proceedings in Docket No. RI63–212 were initiated on December 5, 1962, 28 FPC 942. On balance, it is our view that Jupiter has not presented any basis for further continuance. Any further delay in these proceedings would be contrary to the public interest and the welfare of the ultimate consumers. In view of the foregoing, Jupiter's motions for continuance should be denied.

The Commission orders:

(A) Jupiter's petition for reconsideration of our denial of its motion to sever and stay these proceedings hereby is denied.

(B) Jupiter's motions for continuance hereby are denied.

(C) Jupiter's petition for rehearing of our alleged denial of its petition for declaratory order hereby is rejected.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NOS. RP65–2 AND RP65–5

ORDER APPROVING SETTLEMENT, DIRECTING THAT REVISED TARIFF SHEETS BE FILED AND TERMINATING PROCEEDINGS

(Issued March 12, 1965)

On January 28, 1965, the Presiding Examiner in the instant proceedings certified to the Commission the record herein containing a proposed settlement agreement reached by the parties at conferences held on October 13 and 14, 1964, and January 12, 13 and 25, 1965.

These proceedings involve a filing on July 6, 1964 by Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) in Docket No. RP65–2 to delete Section 7.4 from its tariff and a general investigation initiated by Commission order issued August 31, 1964 in Docket No. RP65–5, 32 FPC 676, with respect to the justness and reasonableness of the terms and conditions of Michigan Wisconsin's tariff. The order of August 31, 1964 also suspended the Company's rate filing and consolidated the two proceedings for purposes of hearing and decision.

As set out in the record and indicated in the Presiding Examiner's aforementioned certification of January 28, 1965, there were four major modifications of Michigan Wisconsin's tariff which were agreed to by the parties and these modifications appear to meet and satisfy the issues noted in our order issued August 31, 1964.

Section 7.4 of Michigan Wisconsin's Rate Schedule ACQ-1, as currently effective, permits customers buying under that rate schedule to release up to 3,000,000 Mcf of annual gas in any contract year if other customers agree to purchase such released gas. The customers releasing gas receive a credit against their demand charge of 13.75¢ per Mcf of gas released. The customers purchasing the released gas pay that 13.75¢ per Mcf plus the Commodity charge of 27.65¢, or a total of 41.4¢ per Mcf of released gas purchased. The record indicates that Michigan Consolidated Gas Company (Michigan Consolidated) has been the only customer purchasing released gas and that no other customer appears to be interested in such purchases at 41.4¢ per Mcf.

Under the agreement, it is proposed to change the amount of the demand credit from 13.75¢ per Mcf to 6.35¢, and thereby pricing the released gas to the purchasers thereof at 34 cents per Mcf. The agreement would also make customers releasing gas ineligible in the same contract year to purchase any authorized annual overrun gas at 27.65¢ per Mcf until such customers have repurchased volumes of gas equal to that previously released under Section 7.4 and have paid 34¢ per Mcf therefore. It is contemplated the reduction in the credit per Mcf of the Section 7.4 gas released and the resultant reduction in the purchase price of the gas so released will encourage a demand for released gas by customers which do not now purchase released gas. This should enable customers which desire to do so to release larger volumes of Section 7.4 gas and bring into effect a better balance between the supply and the demand of release gas.

The currently effective overrun rate schedule (OS-1) applies to daily as well as annual overrun gas at a price of 29.8¢ per Mcf for all gas delivered, regardless of the time when such delivery was made or whether such volumes were in excess of the customers' Maximum Daily Quantity (MDQ). The proposed agreement incorporates three separate overrun rate schedules to alleviate the difficulties incident to supplying annual and daily overrun service under a single rate schedule. The three rate schedules provide for Winter Daily Overrun Service (WDOS-1), Summer Daily Overrun Service (SDOS-1), and Annual Overrun Service (AOS-1). Service under these rate schedules will be available only when Michigan Wisconsin determines that it has excess gas above the requirements of its firm customers. However, in the event that Michigan Wisconsin receives requests for gas under any of these rate schedules which exceeds the supply of overrun gas available, Michigan Wisconsin shall allocate the volumes available to the customers as set out in the agreement.

Deliveries under Rate Schedule WDOS-1 relate to gas in excess of the customers MDQ during the period from December 1 through February 16, and will be billed at the 100% load factor rate of 42.1¢ per Mcf. Deliveries under Rate Schedule SDOS-1 relate to deliveries in excess of customers CD during the period from February 17 through November 30th and will be billed at the ACQ-1 commodity rate of 27.65¢ per Mcf. Deliveries under Rate Schedule AOS-1, relate to all overrun gas taken at any time during the contract year at a daily volume not in excess of the customers' CD and will also be billed at the rate of 27.65¢ per Mcf.

The presently effective tariff provides that the ACQ-1 and SGS-1 customers incur a $2.00 per Mcf penalty for unauthorized overrun gas taken in excess of 101 percent of their Annual Contract Quantity. The proposed agreement deletes the reference to 101 percent and applies the penalty to all gas taken in excess of the customers' Annual Contract Quantity. However, the term Annual Contract Quantity when utilized to assess penalties, is increased from the conventional 190 times the customers' MDQ by an amount equal to the volumes upon which daily overrun penalties have been paid during the contract year. These changes prevent customers from being subjected to both a daily and an annual overrun penalty in those instances when the unauthorized daily overrun results in an unauthorized annual overrun.

The presently effective tariff provides that in emergencies, the gas available shall be prorated on the basis of the customers' respective MDQs. The proposed agreement provides that prior to any such curtailment and in order to protect its firm customers, Michigan Wisconsin may first require that distributors reduce or discontinue service to their interruptible customers using in excess of 200 Mcf per day. The proposed settlement also provides that the proposed changes are not to become effective until the commencement of the new contract year on September 1, 1965.

As indicated by the record and heretofore noted, the proposed tariff changes were agreed to by all parties as a result of conferences between Michigan Wisconsin, its customers, the Iowa, Michigan and Wisconsin state commissions, the County of Wayne, Michigan, the Coal Interveners and our staff. Our review of the proposed settlement and the record herein indicates that the agreed upon tariff changes will benefit all customers of Michigan Wisconsin and provide added flexibility to that company's operations.

The Commission finds:

The settlement of these proceedings upon the basis herein set out and as more fully set out in the record is reasonable, proper, and in the public interest in carrying out the provisions of the Natural Gas Act, and should be approved and made effective as hereinafter provided and ordered.

The Commission orders:

(A) The settlement of these proceedings as herein found to be in the public interest is hereby approved subject to the terms and conditions hereinafter ordered.

(B) Michigan Wisconsin, subject to the approval of the Commission and subject to the applicable provisions of Section 154 of the Commission's Regulations under the Natural Gas Act, shall file the requisite revised tariff sheets to effectuate the above-referenced settlement and such tariff sheets shall be effective as of September 1, 1965.

(C) Upon compliance with the terms and conditions of this order the proceedings in Docket Nos. RP65-2 and RP65-5 shall be deemed terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

PEOPLES GAS AND POWER CO., INC., DOCKET NO. CP64-290

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 12, 1965)

On June 4, 1964, as supplemented on July 30, 1964, Peoples Gas and Power Co., Inc. (Applicant) filed in Docket No. CP64-290 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing

Texas Gas Transmission Corporation (Texas Gas) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in the City of Bloomfield, Greene County, Indiana, all as more fully set forth in the application, as supplemented, in this proceeding.

Applicant proposes to construct and operate 2.27 miles of 4½-inch lateral pipeline extending from the proposed interconnection in Greene County to the corporate limits of Bloomfield. Applicant will also construct and operate the necessary distribution facilities to provide the proposed service.

The third year peak day and annual natural gas requirements for Bloomfield are estimated to be 873 Mcf and 90,035 Mcf, respectively.

The total initial estimated cost for the proposed project is $211,293, which cost will be financed by the sale of first mortgage bonds and equity capital.

On July 10, 1964, Texas Gas filed an answer to the subject application stating that it had no objection to rendering the requested service provided, among other things, that its maximum delivery obligation not exceed 873 Mcf per day.

Due notice of the filing of the application, as supplemented, and opportunity for hearing thereon has been given by publication in the Federal Register on September 18, 1964 (29 F.R. 13089). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–859 (8 FPC 190).

(2) Applicant, Peoples Gas and Power Co., Inc., is a corporation duly organized and existing under the laws of the State of Indiana for the purpose of constructing and operating a natural gas distribution system in Bloomfield, Indiana, and environs.

(3) It is necessary and desirable in the public interest that Texas Gas be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 873 Mcf of natural gas per day to Applicant, as set forth in the application, as supplemented, and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive gas from Texas Gas, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Texas Gas in accordance with the Commission's Regulations under the Natural Gas Act.

(5) The requirement that Texas Gas serve Applicant, as proposed, will not place any undue burden upon Texas Gas nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Texas Gas Transmission Corporation be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 873 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application, as supplemented.

(B) Texas Gas shall report to the Commission in writing the date of commencement of service to Applicant.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Texas Gas, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Texas Gas in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

WARRIOR RIVER ELECTRIC COOPERATIVE ASSOCIATION, PROJECT NO. 2102

ORDER WAIVING PENALTIES FOR DELINQUENCY IN PAYMENT OF ANNUAL CHARGES

(Issued March 12, 1965)

On March 6, 1961 and March 9, 1962, respectively, statements of the annual charges for the calendar years 1960 and 1961 under the license for Project No. 2102 were mailed to Warrior River Electric Cooperative Association, licensee for the project. It was noted on each statement that the charges should be paid "within 30 days of rendition of a bill therefor."

A check in the amount of $1,800, representing the total annual charges owing for 1960 and 1961, was remitted to us by letter dated December 16, 1964, in which request was made for waiver of penalties accruing by virtue of the delinquency in payment, pursuant to Section 11.31(e) of the Regulations under the Federal Power Act. In making the request, we are advised among other things, that the licensee has been reorganized and given new management and that when the 1962 license fee was paid the new management assumed that such payment brought such license fees up to date.

Our records show that the licensee has paid the annual charges for the calendar year 1962, together with the penalty thereon for delinquency in payment.

The Commission finds:

In the circumstances, it will not be inconsistent with the public interest to waive the penalties attaching by reason of the licensee's delay in payment of the annual charges for the calendar years 1960 and 1961.

The Commission orders:

The above-mentioned penalties, by reason of the delay of the licensee in the payment of annual charges under the license for Project No. 2102 for the calendar years 1960 and 1961, are hereby waived.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP65-209

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE SCHEDULE FOR FILING

(Issued March 15, 1965)

On January 8, 1965, Arkansas Louisiana Gas Company (Applicant), Shreveport, Louisiana, filed in Docket No. CP65-209 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas, all as more fully set forth in the application on file with the Commission.

Applicant proposes to make an interruptible sale of up to 20,000 Mcf per day of natural gas to Mississippi River Transmission Corporation (Mississippi) between October 15 and April 15 each year. The rate for this gas is 26¢ per Mcf for all gas delivered.

Applicant proposes to deliver gas to Mississippi at existing interconnecting facilities of each company in Union Parish, Louisiana. Said facilities were previously used for delivery of similar volumes between the parties.

The application states that no new facilities are required in order to provide the proposed service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record finds and orders as hereinafter stated.

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–253 (3 FPC 910).

(2) The proposed sale and delivery of natural gas by Applicant to Mississippi, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas to Mississippi, as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

(C) Applicant's concurrent filing of its contract with Mississippi, designated Rate Schedule XFS–25 to its FPC Gas Tariff, Original Volume No. 3 is hereby accepted for filing to become effective as of the date of this order.

Before Commissioners: David S. Black, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CONSOLIDATED OIL & GAS, INC., DOCKET NO. RI61-350

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE, AND TERMINATING PROCEEDING

(Issued March 15, 1965)

On January 8, 1965, Consolidated Oil & Gas, Inc. (Consolidated) submitted an offer of settlement in the above-designated proceeding, involving the jurisdictional sales of natural gas under Consolidated's FPC Gas Rate Schedule Nos. 26, 27, 28, and 29 to Hugoton Plains Gas and Oil Company (Plains) from the Guymon-Hugoton Field, Seward County, Kansas (Kansas Area) and Texas County, Oklahoma (Oklahoma Panhandle Area). Plains gathers and processes the gas in its Tyrone Gasoline Plant and resells the residue gas to Northern Natural Gas Company (Northern).

The presently effective rate is 18.92¢ per Mcf at 14.65 psia under each of said rate schedules. These increased rates have been in effect subject to refund in Docket No. RI61-350 since February 14, 1961. Consolidated's rates are based on a revenue sharing arrangement with Plains whereby Consolidated is entitled as a contractual matter to receive a rate which is 1.1166¢ per Mcf (corrected for compressibility) less than Plains' resale rate to Northern. The rates in effect subject to refund were based on Plains' increased rate of 20.1626¢ per Mcf for the sale of gas to Northern which was suspended in Docket No. RI60-102. The proposed settlement rates are based on Plains' settlement rate of 15.75¢ which was approved by order issued October 8, 1963 in Docket No. RI60-102, 30 FPC 973.

In its offer of settlement, Consolidated proposes to reduce its increased rates effective February 14, 1961, to 14.6334¢ per Mcf at 14.65 psia, subject to any applicable contractual deduction for compression.[1] Refunds are not involved because Consolidated has not collected rates above the proposed settlement rates.

Inasmuch as the proposed settlement rates are directly related through a revenue sharing arrangement to the 15.75¢ per Mcf resale settlement rate of Plains, acceptance of Consolidated's proposed settlement is in the public interest. Our action here does not constitute either a change in our present policy of suspending all increased rates above 11¢ per Mcf in these areas for the sale of pipeline quality gas within the meaning of the Commission's Statement of General Policy No. 61-1, as amended, or a change in our general settlement policy, but is based solely on the special circumstances presented in this case, in which the Commission's recognition of the agreement made by the parties does not affect the price to the pipeline purchaser.

Our action should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future rate proceedings, including area rate proceedings, involving Consolidated's rates and rate schedules.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Consolidated on January 8, 1965, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

---

[1] It became necessary for Plains to compress the subject gas, and a compression charge of 1¢ per Mcf is in effect pursuant to the contract.

The Commission orders:

(A) The offer of settlement filed with the Commission by Consolidated on January 8, 1965, is hereby approved in accordance with the provisions of this order.

(B) Consolidated shall file within 30 days from the date of issuance of this order, notices of change in rate providing for the 14.6334¢ per Mcf at 14.65 psia rates specified in its offer of settlement. The notices of change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that Consolidated has complied with the terms and conditions of the order, the rates and charges of 14.6334¢ per Mcf at 14.65 psia, specified in its offer of settlement, subject to any applicable contract deductions, shall be effective as of the issuance of this order, and the above-designated proceedings shall be deemed terminated.

(D) The acceptance by the Commission of Consolidated's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Consolidated, including area rate or other similar proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. CP65-218

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 15, 1965)

On January 18, 1965, Montana-Dakota Utilities Co. (Applicant) filed in Docket No. CP65-218 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the calendar year 1965 and the operation of natural gas facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $1,350,000, with no single project to exceed a cost of $337,500, which costs are proposed to be financed from internally generated funds.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on March 11, 1965, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Montana-Dakota Utilities Co., a Delaware corporation having its principal place of business in Minneapolis, Minnesota, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 22, 1946, in Docket Nos. G-220 and G-402 (5 FPC 64).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1965 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,350,000, with no single project to exceed a cost of $337,500.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Montana-Dakota Utilities Co., to construct during the calendar year 1965, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with subparagraph (3) of Section 157.7(b) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1965, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,350,000, with no single project to exceed a cost of $337,500.

OPINION NO. 455

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP63-174

OPINION AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 15, 1965)*

Syllabus

1. It is unnecessary to consider whether pipeline's exhibits standing alone meet requirements of Section 157.14(a)11 of the Rules where [as here] evidentiary hearing has been held and Commission concludes such record is sufficient to support proposal. P. 547.
2. Testimony and accompanying market data establishes Natural's market estimates are reasonable and market exists for additional proposed service. P. 547.
3. In past Commission frequently authorized reasonable quantities of unallocated pipeline capacity. P. 547.
4. Impossibility of predicting with exactitude such factors as changing climate cycles, population movements and economic growth make it essential that a pipeline maintain a reserve of unallocated capacity reasonably enabling it to handle future unforeseen conditions. PP. 547, 548.
5. Unallocated capacity constitutes a reserve upon which pipeline's customers, subject to Commission authorization, may draw to satisfy unexpected needs. P. 548.
6. Total unallocated capacity of less than 1.2 percent of pipeline's total transmission capacity does not constitute an unreasonable reserve, considering vitality of its market areas. P. 548.
7. Natural's storage facilities are being operated at maximum safe capacity and its firm requirements cannot presently be satisfied from this source. P. 548.
8. Proposed expansion does not prejudice Coal Interests' competitive position in Chicago utility market—benefits to public will outweigh any such possibility. P. 548.
9. By virtue of issuance of certificate here, Coal's application for rehearing and reconsideration of prior letter-order granting temporary certificate must be denied. P. 549.
10. Commission *issues* certificate of public convenience and necessity under Section 7 of the Natural Gas Act.

Clarence H. Ross, Charles C. McDugald, Philip A. McKinsey, Fred P. Bosselman, Kenneth R. Myers and *Richard F. Babcock* for Natural Gas Pipeline Company of America; The Peoples Gas Light and Coke Company and North Shore Gas Company.

Justin A. Stanley and *Robert A. Helman* for Northern Illinois Gas Company.

Joseph T. Morrow for Northern Indiana Public Service Company.

John F. Gaston for Iowa Electric Light and Power Company.

---

*Initial decision appears on p. 550. Rehearing and reconsideration denied by order issued May 6, 1965, 33 FPC 979.

Edward J. Hartman for Iowa-Illinois Gas & Electric Company.

Barnabas F. Sears, Hamilton K. Beebe, Charles W. Stadell, Jerome J. McGrath, Robert E. Lee Hall and *Welly K. Hopkins* for Fuels Research Council, Inc.; National Coal Association; United Mine Workers of America and Mid-West Coal Producers Institute, Inc.

C. Louis Knight for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and David S. Black.

BLACK, *Commissioner:*

This is a proceeding under Section 7 of the Natural Gas Act on an amended application by Natural Gas Pipeline Company of America (Natural) for authorization to construct and operate the necessary facilities to increase the daily capacity of its pipeline system by 115,500 Mcf. On the filing by the Coal Interests[1] of a petition to intervene, Natural, supported by its customers, the Illinois Commerce Commission and the City of Chicago requested and obtained temporary authorization to construct the facilities. Following hearings before the Presiding Examiner, the matter is now before us on exceptions filed by the staff and the Coal Interests to the Examiner's decision finding that the facilities should be permanently certificated.

The principal issue raised by exceptions is the validity of Natural's need for the additional gas requested. Underlying this is the question of the validity of Natural's market estimates and of its evidentiary presentation establishing its market requirements. Assuming Natural's need for the gas, an issue is also raised as to whether the facilities here involved are in excess of those needed to meet Natural's market requirements.

Finally, the Coal Interests contend that the proposed expansion is excessive, would have an adverse impact on the coal market and will promote artificial and illegal pricing rates in the gas market.

The initial decision by the Presiding Examiner would grant a permanent certificate to Natural. The Examiner found: that additional gas is needed for Natural to meet its firm market requirements; that Natural's storage facilities are being operated at maximum safe capacity and its firm requirements cannot be satisfied from this source; and, that the expansion involved in this proceeding does not prejudice Coal's position in the Chicago utility market.

Staff, in its exceptions opposing certification, contends that the requested expansion is excessive, challenges the reasonableness of Natural's existing excess pipeline capacity, the competency of the evidence relating to reserves, financing and market estimates, the validity of precedent agreements between Natural and its customers, and the economic feasibility of the expansion proposed in this docket. Staff argues that Natural's presentation is deficient with respect to market requirements, economic feasibility, and gas reserves; that its evidence relating to market requirements failed to comply with Commission regulations; that its application therefore fails to prove all of the elements entering into a determination of the public convenience and necessity; and that, therefore, its application should be denied. Staff concludes, however, that if a certificate is granted to Natural in this proceeding, it should be subject to the following conditions:

(1) That Natural exclude from its plant accounts and its rate base the pro-rata cost of all transmission pipeline capacity in excess of that needed for

---

[1] The National Coal Association, Fuels Research Council, Inc., Mid-West Coal Producers Institute, Inc., and United Mine Workers of America.

the maximum daily volumes of gas which the Commission has authorized Natural to sell on a firm basis, and

(2) That Natural shall submit a plan for permanent financing which is satisfactory to the Commission.

The Coal Interests, also protesting issuance of a permanent certificate, argue that the evidence does not support a finding that Natural's customers need more flow gas; that the Examiner gave inadequate consideration to storage availability to meet peak-season needs. The Coal Interests contend that Natural's expansion is merely a subterfuge designed to inflate its rate base; that increased amounts of valley gas will be dumped at prices below the price of coal and that the expansion will permit Natural's distributors to peg interruptible boiler fuel sales of gas at a price level which will be to the competitive disadvantage of the Coal Interests and harmful to the ultimate firm consumer. Finally, the Coal Interests argue that pegging the price of gas below the price of coal violates the Natural Gas Act and the policies underlying the Federal anti-trust laws.

Briefs opposing exceptions were filed by Natural and Northern Illinois Gas Company on December 14, 1964, urging adoption of the Examiner's decision.

Upon consideration of the entire record in this proceeding, the briefs of the parties, and the exceptions to the Examiner's decision, we conclude that the findings of fact and conclusions of law, as expressed by the Examiner, are fully supported by the evidence and, except as set forth below, we deem it unnecessary to further elaborate on his findings and conclusions.

Markets

Staff and the Coal Interest protest that the Examiner erred in concluding that Natural's Exhibit No. 9 constitutes adequate compliance with Section 157.14(a)11 of the Commission Regulations under the Natural Gas Act which define the evidentiary support required for market estimates. We feel it unnecessary to consider whether the Natural exhibits standing alone meet the requirements of our Rules. Here an evidentiary hearing has been held and, on review of the proffered exhibit plus the amplifying testimony of the market witnesses of Natural's four largest customers, we conclude that the evidence of record is sufficient to support its proposal. We wish to make clear that we are not deciding the question whether similar evidence would support future applications to provide for initial service or a major system expansion. The testimony and accompanying market data of record here established that Natural's market estimates are reasonable and markets exist which need and will purchase the additional service proposed.

Unallocated Capacity

Staff argues that Natural's unallocated pipeline capacity as of November 1963, when added to the unallocated capacity requested in the present docket is excessive and imposes an unnecessary cost on the gas consumer. This Commission has frequently authorized reasonable quantities of unallocated capacity for other pipelines, as well as Natural.[2] New load attachments cannot be made to coincide with the timing of expansion applications. The impossibility of predicting with exactitude such factors as changing climate cycles, population movements and economic growth make it essential that a pipeline maintain a reserve of unallocated capacity which will reasonably enable it to handle future conditions which could not have been foreseen. This unallocated capacity constitutes a reserve upon which Natural's customers, subject to Commission authorization, may draw to satisfy such unexpected needs. The total unallocated capacity, in our opinion, is less than 1.2% of Natural's total transmission capacity. Considering the vitality of Natural's market areas, we do not find such to constitute an unreasonable reserve.

---

[2] In *Midwestern Gas Transmission Company*, 22 FPC 775 (1959), the Commission certificated facilities with 22,790 Mcf unallocated capacity; in *Transcontinental Gas Pipe Line Corp.*, 22 FPC 836 (1959), the Commission authorized construction resulting in 17,000 Mcf of unallocated capacity. See also *Transcontinental Gas Pipe Line Corp.*, 27 FPC 858 (1962), authorizing 8,603 Mcf of unallocated capacity, Opinion No. 424, *Southern Natural Gas Company*, 31 FPC 789 (April 6, 1964), and *Texas Eastern Transmission Corp.*, 28 FPC 1035 (1962).

Storage

The Coal Interests allege that Natural's firm requirements can, if necessary, be met from existing storage facilities. We agree with the Examiner and Staff that based on evidence of record, Natural's storage facilities are being operated at maximum safe capacity and that its firm requirements cannot presently be satisfied from this source.

Impact on Coal

The Coal Interests argue that the coal industry will be seriously injured by the increased sale of valley gas for boiler fuel if the instant pipeline expansion is authorized. They aver that while Coal's contract with Commonwealth Edison Company suggest a greater coal usage, they do not preclude the use of greater volumes of gas and lesser use of coal. Thus, they say, contrary to the Examiner's finding, there is no assurance that coal sales in the utility market will be increased or that the additional gas made possible through the excess capacity built into Natural's expansion will not be used under the boilers of the Edison plants. These contentions must be rejected. There are no sales for boiler fuel or any other purpose by Natural; Natural's commodity rate is 20.6¢ per Mcf.[3] The record shows that Commonwealth Edison will reduce its total gas consumption while increasing its consumption of coal even if Natural makes available, at this rate, additional gas to Commonwealth's supplier, Peoples. The facts thus indicate that the Coal Interests have over-estimated the extent of possible harm to their interests from the project.

On review of the evidence we agree with the Examiner for the reasons set forth in his opinion, that the proposed expansion does not substantially prejudice the Coal Interests' competitive position in the Chicago utility market. In our judgment, the benefits to the public will outweigh any possible harm to the Coal Interests. However, we shall require Natural to obtain reports from its distributor customers for submission to this Commission regarding the total volumes of gas which they sell each month for boiler fuel useage.

Other Matters

Peoples Gas Light and Coke Company (Peoples) takes no exception to the reasoning or conclusions of the Examiner, but does except to the reference made to its Mahomet storage field as an "operating project."[4] Peoples argues that although experimentation is being performed at Mahomet the reservoir has not yet been shown to be acceptable for underground storage. We find this exception to be well taken.

---

[3] The Coal Interests argue at considerable length that the pegging of Natural's commodity rate at 20.6¢ was not derived by cost concepts (because the rate was based on fully distributed cost) but was fixed at the price of competing fuels—*i.e.*, coal. This, it is contended, violates the provisions of Sections 1, 4 and 5 of the Natural Gas Act and the policies of the Federal anti-trust laws. This contention obviously is an impermissible collateral attack on our Opinion No. 367 (28 FPC 731; rehearing denied 28 FPC 1033) in which, over Coal Interests' objections, after a full hearing we expressly fixed the 20.6¢ commodity charge for Natural. The validity of this rate is not affected by the fact that as a result of our action here more gas will be available.

The Coal Interests argue that a temporary certificate was granted Natural by letter-order of the Commission dated August 16, 1963, some 21 days after the Coal Interests filed their opposing intervention, and over the objections entered by them August 2, 1963. An application for rehearing was filed and by order issued October 15, 1963, the Commission granted "Rehearing for Purpose of Further Consideration," but denied the Coal Interests' request for a stay of the letter-order. The application for rehearing and reconsideration of the August 16, 1963, letter-order granting a temporary certificate to Natural is thus still pending before the Commission.

By virtue of our action herein granting a certificate of public convenience and necessity to Natural, Coal's application for rehearing and reconsideration must be denied.

All exceptions, arguments and requests not discussed or granted herein have been considered but are without substantial support in the record or a reasonable basis in law or are immaterial to the proper disposition of this proceeding and should be denied. The Presiding Examiner's initial decision issued herein on October 22, 1964, should be modified as herein set forth and as so modified should, to the extent consistent with this Opinion and Order, be adopted by the Commission as of the date of issuance of the Opinion and Order, to constitute herewith our decision in this proceeding.

The Commission further finds:

(1) The Applicant, a Delaware corporation having its principal place of business at Chicago, Illinois, is engaged in the transportation of natural gas in interstate commerce and the sale in interstate commerce of natural gas for resale for ultimate public consumption and is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The proposed facilities of the Applicant as more fully set forth in its Application and the evidence of record in this proceeding are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by the Applicant are subject to the requirements of Section 7(c) of the Natural Gas Act.

(3) The Applicant is able and willing to do the acts and perform the services proposed, and to conform to the provisions of the Natural Gas Act as amended and the rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with the conditions herein prescribed and all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

---

[4] Examiner's Decision, p. 557.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) Natural shall obtain from its distributor customers and submit to the Commission, annually, the monthly volumes of gas delivered to their respective customers for boiler fuel purposes. Such report shall be made not later than March 1 in each year, commencing in the year 1966.

(D) The initial decision of the Presiding Examiner issued October 22, 1964, is, to the extent consistent with this Opinion, hereby adopted by the Commission as of the date of issuance of this Opinion, to constitute with this Opinion the Commission's decision in this proceeding.

(E) The application for rehearing and reconsideration of our letter-order dated August 16, 1963, filed by the Coal Interests, is hereby denied.

(F) The exceptions filed to the Presiding Examiner's decision are denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION FOR CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY UNDER THE NATURAL GAS ACT

(Issued October 22, 1964)

WILLIAMS, *Presiding Examiner:* This proceeding is pursuant to an application by the Natural Gas Pipeline Company of America, hereinafter referred to as the Applicant, for a certificate of public convenience and necessity under Sections 7 (c) and (e) of the Natural Gas Act, as amended.

On December 18, 1962, the Applicant requested authority to increase the daily design capacity of its pipeline system by 40,000 Mcf and on April 11, 1963, it submitted a revised application to further increase the daily system capacity to 110,000 Mcf. The facilities the Applicant intends to construct and operate include approximately 36.24 miles of 36-inch loop pipeline in Meade County, Kansas, Montgomery and Adams Counties, Iowa and Grundy County, Illinois; approximately 25.92 miles of 24-inch loop pipeline in Henry, Bureau and Whiteside Counties, Illinois; 2,600 BHP additional compression at existing Compressor Station No. 103 in Ford County, Kansas and a new compressor station with 2,600 BHP compression in Woodward County, Oklahoma.

On July 26, 1963, the National Coal Association, Fuels Research Council, Inc., Mid-West Coal Producers Institute, Inc., and United Mine Workers of America, hereinafter referred to collectively as Coal Interests, filed a petition to intervene alleging, *inter alia*, that the proposed expansion of facilities and the resulting volumes of gas to be brought into the Chicago area would have a detrimental effect upon the sale of coal by petitioners and that the existing storage facilities of the Applicant, if properly employed, are sufficient to meet the peak season demands of its firm customers.

The Applicant, on July 29, 1963, requested the issuance of a temporary certificate of public convenience and necessity for the proposed expansion citing emergency conditions and alleging that the facilities in question are necessary to assure the maintenance of adequate service to its distributors during the 1963–64 heating season.

The Commission by letter dated August 16, 1963, issued a temporary certificate to the Applicants and on September 16, 1963, the Coal Interests filed an application requesting the rehearing, reconsideration, and rescission of such action.

The petition to intervene by the Coal Interests was subsequently granted by the Commission, but without disturbing its order of August 16, or granting a stay of the scheduled proceedings. The Commission also refused the Coal Interests' request to consolidate the instant matter with Docket No. RP63-6, a pending rate case.

Hearings commenced on October 21, 1963 and were concluded on May 14, 1964. On January 6, 1964, the Applicant notified the Commission that the construction of all facilities authorized by the temporary certificate was complete and that the increased service authorized by the order of August 16, 1963 became available to its customers on December 1, 1963.

The record consists of 4,178 pages of transcript, 151 exhibits and 7 items by reference to the files of the Commission. The Applicant's initial brief was filed on June 17; the Coal Interests' and Staff Counsel's briefs on July 24 and 22, respectively, and the Applicant's reply brief on August 10, 1964.

The Applicant, a wholly-owned subsidiary of Peoples Gas Light and Coke Company (Peoples) and its principal distributor customer, operates parallel transmission lines from the West Panhandle Field in Texas through the States of Oklahoma, Kansas, Nebraska and Iowa to the Chicago area with a 20-inch sales lateral pipeline extending from the main lines near Genesco, Illinois to the Illinois-Wisconsin state line, and a supply pipeline extending southeasterly from the Panhandle Field through Oklahoma into Wise County, Texas. It also operates a partially looped pipeline extending from the South Gulf Coast Area in Texas through the States of Arkansas and Missouri to points near Joliet and Volo, Illinois.

The Applicant sells natural gas for resale to municipalities and utility companies for local distribution in Kansas, Nebraska, Iowa, Wisconsin, Illinois, Indiana and Missouri. It also owns and operates underground gas storage facilities near Herscher and a smaller project in the Cooks Mills Field, both in the State of Illinois.

The Applicant has been serving its existing markets for about thirty years and it alleges that the present request is part of a regular program of pipeline and storage expansion to meet the firm requirements of gas consumers in its established market area.

The Issues

The principal issue in this proceeding is whether or not there is a *bona fide* need by the Applicant for the additional gas requested. Assuming that such gas is necessary to meet peak season demands, the secondary issue is whether or not such requirements can be met from the Applicant's existing pipeline capability (prior to the construction of the projects involved in this proceeding) and by increased use of its storage facilities.

Staff Counsel, who opposes the issuance of a certificate in the premises, has, in addition to the above questions, raised a multitude of subordinate issues which challenge, *inter alia*, the reasonableness of the Applicant's excess pipeline capacity, the competency of the evidence relating to reserves, financing and market estimates, the validity of the precedent agreements between the Applicant and its customers and the economic feasibility of the expansion.

The Coal Interests, who likewise contest the issuance of a certificate to the Applicant, allege, in addition to the key issues previously stated, that the expansion is merely a subterfuge designed to inflate the Applicant's rate base; that increased amounts of valley gas will be dumped at prices below the price of coal and that the expansion will permit the Applicant's distributors to peg interruptible boiler fuel sales of gas at a price level which will be to the competitive disadvantage of the Coal Interests and harmful to the ultimate firm consumer.

Proposed Markets

The record indicates that the Applicant has agreed to supply sixteen of its customers with the following amounts of additional flow gas per day:

	Mcf at 1,000 Btu per cubic foot and 14.65 psia
The Peoples Gas Light and Coke Company	35,000
Northern Indiana Public Service Company	25,000
Northern Illinois Gas Company	15,000
North Shore Gas Company	14,000
Central Illinois Electric and Gas Co	3,000
Wisconsin Southern Gas Company	2,500
Iowa Electric Light & Power Company	1,000
Missouri Utilities Company	671
City of Nebraska City, Nebraska	500
Iowa Southern Utilities Company	466
Citizens Gas Company	400
Associated Natural Gas Company	345
City of Salem, Illinois	340
Iowa Power and Light Company	300
United Cities Gas Company	200
Ruth Fuel Company	174
	98,896

The four largest customers, accounting for 89,000 Mcf of the gas involved, each presented a market witness who testified at length concerning the demand for gas in his respective area.

Mr. W. S. Crowley, Vice-President and Comptroller of Northern Illinois Gas Company (Northern) testified that the additional supply requested by his company is primarily for space heating and that during the summer the gas not used to meet customer demands will be injected into storage. He also stated that some small quantities of the gas will be sold to interruptible customers during the summer months.

Mr. Jack W. Stine, Administrative Assistant in the Executive Offices of Northern Indiana Public Service Company (NIPSCO), testified that his duties relate to the supervision of gas supply, marketing and requirements and that NIPSCO would attach an estimated 23,200 space heating customers during 1963. Mr. Stine admitted upon cross-examination that approximately 18,000 Mcf per day of the additional gas requested would be sold to firm industrial processors.

Mr. Donald H. Keller, Assistant to the President, North Shore Gas Company (North Shore), testified that he is familiar with the market conditions of the company and, in his opinion, based upon estimates furnished to him by the sales department, North Shore would attach some 4,300 space heating customers in 1963 and that the peak day requirement would rise by 9,900,000 cubic feet. He also estimated that 256 commercial space heating customers would be added to the system in 1963 with an additional peak day requirement of 2,069,000 cubic feet.

Mr. Joseph P. Thomas, Assistant to the Comptroller, Peoples, and former Manager of the Rates and Markets Department, testified that he is directly responsible for studies relating gas supply to Peoples' market requirements. Mr. Thomas stated that while no additional gas was requested from the Applicant in the original application, the send out experience gained by the previous winter's extreme temperature periods; the unavailability of other sources of gas supply and the first year of unrestricted space heating attachments are the factors which prompted the request for additional gas in the amended application.

Mr. Carl Altenbern, the Applicant's Sales Manager, testified with respect to the balance of the gas requested which will be delivered to the twelve so-called downline customers. Only three of these customers desire more than 1,000 Mcf and eight have asked for 500 Mcf or less. Many of the individual customer requirements submitted to the Applicant in response to a letter of solicitation, were adjusted by Mr. Altenbern pursuant to subsequent conversations with representatives of the customer.

Sufficiency of the Market Estimates

Staff Counsel and the Coal Interests claim that the Applicant has not complied with the regulations issued pursuant to the Natural Gas Act in a number of material respects in presenting existing and prospective natural gas requirements of its customer distributors.

Staff Counsel's brief, page 3, states in effect, that the Applicant has failed specifically to comply with Sections 157.5 and 157.14(a) (11) (iv), (v) and (vii) of the Regulations which require that supporting historical data, market surveys and conformed copies of contracts for sale or transportation of natural gas be tendered for filing with its application.

Considering first whether or not the requirements of Sections (11) (iv) and (vii), *supra*, which are concerned with the gas requirements of the pipeline and its customers, explanation and derivation of basic factors used in estimating future requirements and copies of market surveys, have been satisfied in the Applicant's presentation, the Examiner has no difficulty in reaching an affirmative conclusion. Even a superficial inspection of Exhibit 9 will reveal compliance with the statistical requirements of Section (11) (iv), and Section 3 of such exhibit contains actual historical data; *i.e.*, the past three years' operating experience and detailed projections for three years in the future.

Insofar as market surveys are concerned, the Examiner is satisfied that Exhibit 9, as a whole, is a "market survey" within the meaning of Section (11) (vii), particularly in view of its extensive amplification by the testimony of the individual market witnesses.

The data shows that in the year 1962 the distributor customers of the Applicant furnished the gas requirements of more than 3,600,000 consumers and the number of such consumers is expected to increase by approximately 180,000 a year in the foreseeable future. It is the actual requirements of these end users, regardless of their classifications as residential, commercial or industrial, that the distributors must forecast as accurately as possible and be ready to supply. The task of estimating the needs of the multitude of consumers is a formidable one since a distributor's utility status prohibits a choice of customers or the number of gas consuming appliances such customers may elect to purchase.[1]

---

[1] The record indicates that wartime restrictions on new gas service or appliance connections have been removed.

It is obvious that a distributor can exercise little control over the use or lack of use of firm service, the buying decisions of the consumer and, least of all, the vicissitudes of the weather; all of which factors are important in estimating the gas requirements of its customers.

Since a distributor cannot precisely determine the future requirements of its customers, it is necessary to make a reasonable projection or estimate of these demands. Such a guide is necessary for management not only in the matter of gas supply from the various pipeline sources, but for a number of other cogent reasons, such as operating expenses, capital expenditures, employment, financing, all of which are essential to the proper functioning of a utility business.

The Examiner has reviewed the market data presentation of the Applicant and it is his finding that the Applicant and the various distributors involved have furnished the requisite historical data contemplated by the regulations.

The historical data in the instant proceeding is similar in form to the material submitted in many previous certificate cases by the Applicant and, in fact, compares with the presentation made in Docket No. CP64–162, which application was filed subsequent to the instant case and approved by the Commission on July 27, 1964, 32 FPC 370. While past certifications are not immutable proof of the adequacy of the Applicant's presentation in the case at bar, the similarity in form and content suggests to the Examiner that the Commission will consider the same to be an "adequate presentation in intelligible form" within the intent and meaning of Section 157.5 of the Regulations.

Staff Counsel cites Opinion No. 409, *East Tennessee Natural Gas Company*, Docket No. CP63–212 (November 5, 1963), 30 FPC 1197, as authority in support of his demand that the application in the instant proceeding be dismissed for the lack of "supporting historical data" required by Section 157.14(a)(11)(iv) of the Regulations pursuant to the Natural Gas Act.

The Examiner regards the circumstances upon which Opinion No. 409 was predicated—an abbreviated proceeding where the application failed to state the nature and extent of the facilities for which a certificate was sought—as substantially different from those prevailing here and, consequently, the citation cannot be considered pertinent.

Staff Counsel also alleges that the Applicant has failed to file or offer in evidence a copy of each contract, letter of intent or other agreement for sale or transportation of natural gas proposed by the application in conformity with the requirements of Section 157.14(a)(11)(v) of the Regulations promulgated pursuant to the Natural Gas Act.

This assertion appears to be bottomed upon his mistaken belief that the copies of the sixteen precedent agreements embraced in Section 2 of Exhibit 9 are not valid instruments within the meaning of the above-mentioned Regulations because (a) they contain certain conditions subsequent relating to the Applicant's ability to deliver the specified amounts of additional gas; (b) the copies of such agreements are hearsay and are not admissible under any established exception to the hearsay rule; (c) the copies are not the best evidence and (d) no authenticating witnesses were called to testify as to the validity of the execution of each agreement. Notwithstanding the aforesaid alleged deficiencies, Staff Counsel is concerned about the present legal effect of the agreements since a temporary certificate has been granted and the expanded service has, in fact, commenced.

Since the precedent agreements are not required by the Regulations[2] and the Applicant has demonstrated through the testimony of market witnesses and copies of service agreements that customers are ready to take the gas under the terms set forth in the application, the objections raised by Staff Counsel are moot.

Despite the academic posture of the question, the Examiner has no difficulty in reaching the conclusion that the precedent agreements are valid contracts, letters of intent or other agreements for the sale of natural gas. A condition subsequent is not an unusual contractual provision. In the instant case, the permanent certification of the proposed facilities requires the execution of a service agreement by the respective parties for the additional gas involved as contained in the Applicant's FPC Gas Tariff. The intermediate contractual effect of the temporary certificate upon the precedent agreements, and the fact that service has commenced pursuant thereto, are extraneous to this proceeding, but since Staff Counsel has raised the point it is, perhaps, also appropriate to observe that interim Service Agreements, pending the completion of this proceeding, have been accepted for filing by the Commission with respect to all sixteen customers of the Applicant as of December 1, 1963.

The Examiner is satisfied that the copies of the precedent agreements contained in Section 2 of Exhibit 9 are probative and reliable evidence[3] that such agreements have, in fact, been entered into between the various parties. Each of the four principal customers of the Applicant supplied a responsible market witness who testified at length as to the amount of gas requested in the respective precedent agreements. The execution of such contracts is further corroborated by the fact that the interim Service Agreements previously mentioned have been filed in each case for the expanded service which commenced on December 1, 1963.

Staff Counsel has posed a further question with respect to this certification: namely, whether or not the Applicant should be permitted to triple its existing excess transmission pipeline capacity.

Taking a negative position, Staff Counsel claims that the 115,500 Mcf expansion, in view of past experience, would enable the Applicant to serve the growing contract demands of its customers for more than 14 years. This assumption is based upon the observation that in the 12 months' period immediately preceding the filing of the amended application, the Applicant's unused pipeline capacity was put into service at the rate of approximately 2000 Mcf per month; for the period from December 18, 1962 to April 11, 1963, 1250 Mcf per month; for the period from April 11, 1963 to November 8, 1963, 300 Mcf per month, while for the period from December 1962 to November 8, 1963 the rate was about 7800 Mcf per day on an annual basis.

Staff Counsel's argument fails to distinguish between allocated and unallocated capacity. In the case at bar, the Applicant has requested authority to construct 115,500 Mcf per day of additional capacity of which only 16,604 Mcf per day is unallocated, the balance of capacity having been spoken for by sixteen customers who request an additional supply of gas.

---

[2] Section 157.14(a)(11)(v) provides that there shall be attached to each application: Conformed copy of each contract, letter of intent or other agreement for sale or transportation of natural gas proposed by the application. Indicate the rate to be charged. If no agreements have been made, indicate the basis for assuming that contracts will be consummated and that service will be rendered under the terms contemplated in the application.

[3] The complex and technical nature of the administrative hearing often precludes adherence to the exclusionary procedures common to the jury trial. The reliability of evidence as gauged by surrounding circumstances is more often a desirable touchstone of admissibility than personal knowledge.

The following table, extracted from Exhibit 9, Schedule 3, lists the peak day, flow gas requirements of the Applicant's customers here seeking an increased allotment of firm deliveries, as actually experienced for the years 1960, 1961 and 1962 and as estimated for the year 1963.

Flow gas only—Peak day requirements (Mcf at 1,000 Btu)

Customer	1960	1961	1962	1963
Associated Natural Gas Co	1,830	2,163	2,710	
Central Illinois E & G Co	37,518	53,018	57,141	
Citizens Gas Co	1,086	1,086	1,806	
Iowa El. Lt. & Pwr. Co	22,576	26,902	32,752	
Iowa Pwr. and Lt. Co	17,377	19,193	18,138	
Iowa Southern Util. Co	4,658	7,011	7,542	
Missouri Utilities Co		608	922	
Nebraska City, City of	5,571	4,982	4,381	
North Shore Gas Co	46,064	52,777	67,195	
Northern Illinois Gas Co	495,629	535,249	533,342	
Northern Indiana P. S. Co	126,344	143,736	161,007	
Peoples Gas Lt. & Coke Co	536,243	545,564	605,802	
Ruth Fuel Co	658	700	767	
Salem, Illinois, City of	1,282	1,235	3,115	
United Cities Gas Co	1,699	2,500	3,022	
Wisconsin Southern Gas Co	10,032	12,940	12,781	
Total	1,308,567	1,409,664	1,512,423	
Increase over previous year		101,097	102,759	[4] 115,500

[4] Applied for in this application, including 16,604 Mcf of unallocated capacity.

As previously pointed out, Exhibit 41 clearly demonstrates the rate of growth on the Applicant's system from 1950 through 1963. Exhibits 23, 34 and 38 show the increasing requirements for three of the principal customers, Peoples, NIPSCO and North Shore, respectively, from 1952 through 1962. The combined data for the three distributors alone show an average annual increase in flow gas requirements of 73,500 Mcf per day during the ten-year period and an increase in storage gas requirements on an average annual basis of 40,400 Mcf per day.

With respect to the balance of 16,604 Mcf unallocated capacity, *supra*, that is alleged to be a reserve upon which the Applicant may draw subject to Commission authorization to supply unforeseeable demands. Witness Altenbern testified that such a supply is necessary to serve new and old customers between the times that expansion applications are filed. He also stated that if such a reserve was not readily available, the delays in obtaining authorized service could cause a substantial loss of business to the distributors and their customers.

Staff Counsel takes the position that such unallocated gas when added to the amount which existed in the pipeline as of November 1963 (7,609 Mcf) creates an unreasonable total of excess capacity. By dividing the estimated cost of the additional facilities in the proposed expansion by the amount of gas requested, Staff Counsel argues that the excess capacity will cost the consumer $69.93 per Mcf and $1,693,000 in the aggregate.

Since the 7,609 Mcf of unallocated gas which existed as of November 1963 has been in part permanently certificated, by the allocation of 2500 Mcf per day in Docket No. CP64–136, the balance of 5109 Mcf excess capacity plus the 16,604 Mcf per day here requested (a total of 21,713 Mcf per day)—less than 1.2 percent of the Applicant's total transmission capacity—does not appear to be unreasonable. In fact, two previous certifications (CP62–121 and CP62–167) have approved unallocated capacities of nearly 2 percent of the Applicant's total transmission capacity. Also, the costs of the unallocated capacity to the consumer as projected by Staff Counsel are entirely speculative since the expansion is not reflected in the currently effective rate schedules of the company and no increased charges will accrue to any customer until such time as a new rate filing becomes effective.

The Examiner finds from the evidence of record, including all exhibits relating to market requirements, data and the supporting testimony of the witnesses of the Applicant and the companies seeking an additional supply of gas, that the presentation of the Applicant is adequate and further, that an additional amount of gas is necessary for the Applicant to meet its firm requirements.

Storage

The Coal Interests have assumed the altruistic burden of attempting to demonstrate that the proposed expansion is not in the public interest. In their opinion, the alleged firm requirements of the Applicant can, if necessary, be met from existing storage facilities. This alternative, it is argued, will save the ultimate consumers the unnecessary cost of the pipeline expansion which. the Coal Interests believe will be promptly reflected in an inflated rate base, rate of return and revenue.

It is an accepted fact that valley gas is a concomitant of pipeline expansion, and unless it is injected into storage to meet peak demands, the gas usually finds its way to the interruptible market and in competition with coal. The Coal Interests, therefore, will benefit substantially from the storage alternative which they urge in the premises.

The Applicant operates a large aquifer-type storage project known as Herscher in Kankakee County, and a smaller hydrocarbon type reservoir known as Cooks Mills in Coles County, Illinois. It also has under development aquifer reservoirs at Cairo and Keota in southeast Iowa. Northern Illinois operates a large aquifer-type storage facility at Troy Grove in LaSalle County and other aquifer facilities are under development at Ancona in Livingston and LaSalle Counties, Garfield in LaSalle County and Crescent City in Iroquois County, Illinois. Peoples operates an aquifer storage project at Mahomet, 90 miles south of Chicago in Champaign County, Illinois and NIPSCO has aquifer reservoirs at Royal Center in Cass County and Lake of the Woods, Marshall County, Indiana.

Dr. J. M. Wanenmacher, a consulting petroleum engineer of many years' experience, testified in behalf of the Coal Interests stating, in substance, that an extensive investigation of the underground gas storage facilities which are presently available or are expected to be available to the Applicant and its customers, has been made under his direction and control; that it is his opinion that such facilities are not being operated at optimum capability and that the cost of maximum development and operation of such storage projects would be substantially less than the cost of meeting peak demands in the Chicago area by pipeline expansion.

Dr. Wanenmacher's conclusions were rebutted by Dr. Donald L. Katz, a professor of chemical engineering at the University of Michigan, and one of the principal consultants to the Applicant, Peoples and Northern Illinois on underground storage.

Dr. Wanenmacher stated, as a basic premise of his opinion, that the Applicant's storage facilities are not being operated to their full capacity, because "gas can be injected into a reservoir as rapidly as it can be withdrawn."

Dr. Katz, however, states that the proposition is correct only with respect to hydrocarbon reservoirs and not aquifers. Citing Herscher-Galesville as an example, Dr. Katz pointed out that while withdrawals of 750,000 Mcf of gas have been made on a single day, the maximum injection for a single day is 208,000 and the maximum daily summer rate of injection is less than 40,000 Mcf, the reason being that in an aquifer-type reservoir, except when pressure is low following a heavy withdrawal, the gas being injected must push back and compress the water which permeates the structure.

Dr. Katz further related that the high injection pressures recommended by Dr. Wanenmacher would result in extensive leakage in the Herscher-Galesville reservoir.
